The Vista commandLink button has an image property that you can modify and add your own. Not really hard to set.?

Hacker_Adi - July 28, 2012, 1:14 am

But with Ekin0x his buttons this is also possible if you even had a look into it you would see?

No need to look I know that he has the same property ... That's why it's unnecessary to provide the same control. What's really the difference ?

He has the choice beetween different Icon in the property grid ?

NO ! Ok it's the same. This is not a creation but a copy/paste from..
