Thread: [Syndicated HTTP - HTTP Botnet - Panel Preview - Coming Soon To The HF MarketPlace!](#)

Syndicated - July 31, 2012, 1:44 am

I've been working around the clock on my HTTP botnet software.

The bin is finished, and the panel is getting close. Release date should be within the next 3 days. Written in VB6 and PHP, you don't have to worry about dependencies. (EVEN ON WINDOWS 8!)
<http://msdn.microsoft.com/en-us/vstudio/ms788708.aspx>

The bot currently has the following features:

UAC Bypass (WinXP, Vista, 7, 8(Unstable on 8))

Visit Site (Hidden/View-able)

Download/Update

DDoS (SYN, HTTP GET, HTTP POST, Slowloris)

FormGrabber (FF, IE, Chrome) (Unstable. Coming in future update)

RDP Switch - Turns your slaves computer into an RDP! (Unstable, working with winXP only so far. Future update)

Socks5 - Use yours bots connection for Socks5 proxies (Unstable, working with win7 only. Future Update)

Also coming in future updates::

(Bin Side)

CPA Offer Completion (Ya, you know that shit people are selling for like 300 bucks? I've got it half coded and will be included with Syndicated HTTP in a future update!)

Plugin Options - Add modules to Syndicated. Plugin system will be open source so that you can write your own, or others can as well.

Distributed BruteForce Attacks - Use your botnet to bruteforce logins faster than you can with one system.

(Panel Side)

Download Limits, along with public link feature. Sell bots and give your clients a link to watch the download progress. Will use an external domain to display stats so that your clients don't have your domain name.

Multiple access accounts, with limits for user accounts. - Allow multiple admin logins, or sell access to your botnet, while limiting the things users can do.

If you have a suggestion for future features, please post them here, and I will do my best to look into the options :D

Now, for the panel review:

Login:

Spoiler [\(Click to View\)](#)

Control Panel:(Large Image)

Spoiler [\(Click to View\)](#)

Any feedback is appreciated!

Not2EXceL - July 31, 2012, 1:52 am

Edit, I just read VB6, maybe I shouldn't stay up so late, can't even read. -_-

Well, hopefully this is super stable since it looks promising.

Also, I could make a gfx for free for you if I have time, pm me if your interested.

Syndicated - July 31, 2012, 1:54 am

I'm fine with the panel's graphics, but thread graphics is more what I'll be interested.

It's vb6.

betamonkey - July 31, 2012, 6:01 am

I think you should just hold off until all items marked "unstable" or "only works on <x>" are finished and working right.. Everything on there like that are what I would consider main features. Without them, it just seems like another bot.

Beta Monkey

I want to get people who are running several hundred bots on it to test stability. First release price will be around 15-25 dollars.

Are you able to get on your irc? Got a few questions.

AntiCode - July 31, 2012, 6:07 am

So your formgrabbers can grab through SSL sites right ? If so would like to buy this. interested with this.

Syndicated - July 31, 2012, 6:09 am

Once it's complete, it will grab from any site accessed through the supported browsers.

jacobjonno - July 31, 2012, 6:12 am

Looks verry nice! HTTP bot sounds really cool, can't wait till it is done!

M3ltd0wn - July 31, 2012, 6:16 am

I've got a LOT of bots to test it on if needed.

Looks nice though, hopefully it won't turn out to be C+Ped shit.

Syndicated - July 31, 2012, 6:20 am

Fortunately, I've got stronger ethics than the CopyPastafarians.

The only thing not coded from scratch is the theme.
And those where all HTML.

The rest, from the PHP, to the bin, are coded from scratch.

van1lle - July 31, 2012, 6:26 am

You better not release this bot within 3 days if 4/7 features are unstable.
And how are you supposed to create a formgrabber in vb6?

Syndicated - July 31, 2012, 6:54 am

(Jul 31, 2012 06:26 AM)van1lle Wrote: [\[CITE\]](#) You better not release this bot within 3 days if 4/7 features are unstable.
And how are you supposed to create a formgrabber in vb6?
External DLL API's.

It's a work in progress. Very much so a work in progress.

Probably as a plugin/BHO. But yeah, I would listen to van1lle. He has a point.

M3ltd0wn - July 31, 2012, 9:31 am

Panel looks good :)

I wish you best of luck for the future :)

blackhatman - July 31, 2012, 9:36 am

looking forward to seeing what this bot is all about

American Apathy - July 31, 2012, 9:50 am

You need to actually complete it before thinking about releasing it. Just get one or two people to test the stability while you finish off the features.

Not2EXceL - July 31, 2012, 11:06 am

Well, he could leave out the 3 unstable feature for now and just release it with the stable features, then update it once the unstable features become stable.

betamonkey - July 31, 2012, 11:12 am

now and just release it with the stable features, then update it once the unstable features become stable.

It's stupid for people to update their nets like a week later just to get things that should have been working in the first release, though. I don't know what the rush is.. Just get it working and then release ?

Regards,
Beta Monkey

It's All about the money money money I really need your money money money money i just want HF to pay me forget about the fuckthereleasedatewithoutmakingthebotstableineedtoleaseitineedmoney.

god i'm a great singer.

Syndicated - July 31, 2012, 9:37 pm

Updated task creation page :)

AcidSuit - August 1, 2012, 2:51 am

I vouch for syndicated I talked to him on skype about this and is %100 legit, great coder.

Syndicated - August 2, 2012, 5:21 am

Thanks for the compliment.

The only thing stopping me from releasing this moment is the timing subs.

Working out getting it to ignore commands without fucking with the timer interval so that it doesn't ignore the new commands.

Cloud9™ - August 3, 2012, 12:10 pm

Vouch for Syndicated, he knows what he is doing.

SBMK - August 3, 2012, 1:45 pm

the panel seems very nice, good luck with the project!

MotionEye - August 19, 2012, 7:46 am

Very nice GUI,

Waiting for this :P

Will buy as soon as Release !

CRT - August 19, 2012, 8:11 am

seems pretty good, theres few if any HTTP bots on the market in HF so this should fit nicely.
