Thread: [Infinity Crypter vs. 2012 Crypter vs. Data Protector - Opinions?](#)

?Mephobia - August 1, 2012, 6:28 pm

So which of these is the best. Please rate accordingly to FUDness, not necessarily features. Mostly just FUDness and its length of FUDness and the amount of time the owners updates it. Thank you.

Rikko - August 1, 2012, 6:29 pm

I'm using Infinity crypter.. it's actullay pretty good when it works :p! I got it work with Cybergate... when I try with darkcomet.. it will not work.. Maybe it's me.. I don't know... :)

?Mephobia - August 1, 2012, 6:30 pm

So how FUD is it and how long does it stay fud?

Silvermage - August 1, 2012, 6:38 pm

I just bought infinity crypter. I must say, there are a ton of on time FUD updates, and I have not had any non FUD files when crypting with it.

WarrioR™ - August 1, 2012, 8:33 pm

Infinity is a great .net crypter no doubt about it.

I said it because I have worked with 2012,data,and infinity and i want to say Infinity is better than others!!!

thebadboy - August 1, 2012, 10:43 pm

its grate need it pls and waiting more from u

?Mephobia - August 4, 2012, 9:13 pm

I kinda want more votes here. I do not want to invest in a bad crypter. When I had NO\$Crypter it was great and stayed pretty FUD, but then he discontinued it. But idk anything about Infinity and what not. Please vote.

Drakkar - August 8, 2012, 11:18 am

infinity is great i should've bought the lifetime when i had the chance but i only purchased the 3 months anyway i miss when you were able to add an error msg to the crypted file :(

rosie123 - August 12, 2012, 1:27 pm

i please contact me my email is rosiesandra@hotmail.com plzzzz :DD

mikeyjsa - August 24, 2012, 2:43 am

What crypter doesnt require dependancies?

poison2012 - August 24, 2012, 5:50 am

(Aug 24, 2012 02:43 AM)mikeyjsa Wrote: [\[CITE\]](#) What crypter doesnt require dependancies?

ASM and C++ crypters

ASM and C++ crypters

SXPEL - November 1, 2012, 12:36 pm

Could anyone link me to any of these crypters?

NervyGunSage - November 1, 2012, 3:46 pm

2012 crypter works great on dark comet :D no dc

Jock - December 26, 2012, 9:28 pm

what is it you use for darkcomet i use infinitycrpter but no matter what still pops up on avg :) am i using it wrong with IC ?

Dive - December 27, 2012, 6:01 am

I love infinity, they need to decrypt it though!

Bizman - December 27, 2012, 9:20 am

I think none of these. I would go for [Sheikh Crypter](#) (FUDtime 1-2 weeks) and if you want a non dependenent crypter then [xProtect Crypter](#).

frankledges - January 6, 2013, 2:58 am

Can we get private editions of these Sheikh and xProtect Crypters for free from any links?

euha - January 13, 2013, 12:56 pm

would like to try 2012 crypter... looks real great

Desty - January 13, 2013, 2:47 pm

I am using 2012 Crypter. Have had DataProtector aswell. But since it corrupted my server, I had to throw it away.

2012 Crypter is ok, N3onight is doing great Job. It has 3 different stubs. FUD time is not as long as it should be. But he updates crypter very often. I'd say after week it is 3/44 detection. But I order private stub(never shared), for 5 bucks extra. That gets me 2 weeks fud time easily.

drewkasp - January 28, 2013, 2:12 am

Which one works excellently well with DC v5.3 and when i mean FUD, i mean runtime FUD....

Slurping - January 31, 2013, 6:20 am

I have several files still FUD after months of crypting CyberGate with Cybershield. Started experimenting with other crypters and Infinity was the first I picked up, and I still haven't got to use it because their system is down and they don't seem anxious to bring it back up.

Hopefully it will have a FUD time a lot longer than two weeks, since I'm accustomed to much longer.

LEGION - January 31, 2013, 6:21 am

Infinty crypter, 2012 crypter is just shit. ?

redpois0n - January 31, 2013, 6:24 am

2012 crypter in 2013 wont sell good at all.

Univers3 - January 31, 2013, 8:31 am

2012 Crypter works very well with the most of RATs.

Very stable.

chard5230 - January 31, 2013, 3:58 pm

go for Data Protector 10/10.. but the owner was so rude

pog0 - February 1, 2013, 1:07 pm

I'll give you my opinion but are you talking about a private copy of the crypters or just public? If it is private you can't really give an opinion unless using all three so that a comparison can be made. I've gotten to use both private versions of infinity crypter and 2012 crypter (well, not yet waiting for an error to be patched). Infinity crypter was FUD and I'll re-update this post when I try out 2012's. No idea for public. Hope that helps a little :)

Snizz - February 1, 2013, 7:49 pm

I recommend using 2012 Crypter and purchase your own private stub. There are updates often.

redpois0n - February 2, 2013, 5:26 am

Seriously what will happen with 2012 crypter now when the year has changed?

Pineapple - February 2, 2013, 7:28 am

n0\$foratus is a faggot so probably best to stay away from his crypter.

Miki - February 2, 2013, 7:29 am

2012 Crypter is amazing, neo updates the crypter every day so stays 0/32 for very long time, also has amazing features like built in Anti-Virus Scanner.

jakichan77 - February 27, 2013, 5:05 pm

I'd have to go with infinity crypter if I were you.

goldi72 - February 28, 2013, 2:44 am

For me it is better 2012 crypter,
because it's a long time FUD as Infinity.
Otherwise, both crypter are very good.

MyLittlePony - February 28, 2013, 7:46 pm

Infinity Crypter > Data Protector > 2012 (never used this or heard of).

jmark4040 - March 19, 2013, 5:02 am

can some body talk about 2012 crypter?

?Sakura? - March 19, 2013, 5:10 am

Stop buying cypters from here

I think your syncro?

If so I will find better service than here

Xparn - May 16, 2013, 2:31 pm

I'm using 2012 crypter works flawless with Dark Comet, though having problem with Blackshades, i'm not sure if it's just me. The only one i have and bought yet so i can only talk about it, updates are often max 3/32 then it gets refud.

niekva - November 24, 2013, 1:23 am

use datascrambler! costs a little but is definitely worth it .

mattzz - June 24, 2014, 9:09 am

how can i get this product, please can any one help by pm?

lucky. - June 24, 2014, 9:12 am

(Jun 24, 2014 09:09 AM)mattzz Wrote: [\[CITE\]](#) how can i get this product, please can any one help by pm?

You just dug up an old ass thread. If you are wanting to purchase one of these, use the Search button to find the sales thread.

Try not to post in threads that are over a month inactive.

mattzz - June 24, 2014, 9:14 am

can some one help me on how to get data protector
