Thread: [\[Tutorial\] How to make fake website modifications \[Tutorial\]](#)

Investigator' - August 4, 2012, 11:20 am

Hello dear members!

In this tutorial I'll show how to make fake website modifications. Tutorial is 100% written by me. However method existed way before.

FAQ:

Others see these modifications too or just me?

Only You'll see these changes, so It's completely free and absolutely legal.

Will It harm the site/page?

No, It won't. You can solve it with a page refresh.

Is it noob friendly?

Totally, although with some experience in HTML you can do really funny stuffs with it.

Does it need any knowledge?

Method itself doesn't need any knowledge, but for HTML modifications It's useful to know some HTML of course.

Alright, now let's see the method itself.

- 1.) Go and Download FireFox plugin called [FireBug](#).
- 2.) Install it like any other Add-on.
- 3.) Restart FireFox.
- 4.) Search target site. It can be ANY site.
- 5.) Right Click to any object on the site what you would like to modify.
6. Edit/Type/Create code.
7. Enjoy!

A screenshot to show how does it look like:

This is not hacking.

Why post this useless thread in this section?

Tor - August 4, 2012, 11:23 am

Thank you for the share mate .

Hope people will enjoy

Why post this useless thread in this section?

There're many things on HF what is NOT hacking to be honest.

Yay, It's not hacking but atleast fun.

Use your creativity and find out something good to do with it!

Btw, It's able to hack with it, but that's an other method. So ask before you post.

Maybe next day someone will make a tutorial on how to open your PC o
how to slice a piece of bread.

I'm sorry dear member if I disappointed you, but here's the task do something amazing and post.
That will be good for us all!

I found this method fun, so I posted.

That's the point, it's not a method, it's just common sense.

I'm pretty sure everyone has an inspect element in their browsers
and know how to use it..

And I think not. This is the world where we always can learn something new. And this is a forum where there are beginners and advanced users. I'm not sure about you, but I guess there're people on HF whose don't know about it.

Did you knew about it? Fine, I respect your knowledge, but please don't post if you can't add something helpful. Please.

Also You've got opinion, I've got opinion, we're different. I found it good, you found it useless. I accept it, but now please go and do something else to make this forum better. Good luck!

The title should be edit a web with firebug

Vlad1k - August 5, 2012, 1:43 pm

This can actually be used for hacking. I have used it a LOT. For example:

If you have a code for a specific button to refresh page, but the admin has made the button DISABLED, you use FireBug to make it enabled, and you press it and it works. This has helped me in a game.

Oxy - August 5, 2012, 2:19 pm

changing the offline content of a site is useless. unless you use it to obtain more characters which allows you to input more characters good for xss and more methods.

firebug is indeed a good thing to use. good tut only litle small. i got tutorial on firebug allready you can also use firebug on google chrome.

this also allows us to enable surveys or buttons.

also good for small scams but encouraging scams i do not!
