Thread: [problem with xampp](#)

Hepic - August 7, 2012, 12:07 am

Guys i have download the xampp, but the installation of apache tell me that failed, and when i put <start> only the mysql run the apache tell me that it is busy.

any help?
my skype is magas1291
could help me?

is anything running on port 80? Use the netstat button to check.

If you're using skype, shut it down, start apache, then turn skype back on :)

Hepic - August 7, 2012, 3:41 am

Yea i did it.
Thank you for your help guys too.

You can change this very easily, just go to skype settings, advanced, connection and uncheck "Use port 80 and 443..".
(Text may diff cause I translated it from my language)

Skype or Team Viewer might be interfering .
Run Command Prompt as Administrator
Type : netstat -b
You will see the list of programs with the ports they use.
Just end task the one's that use 80.
If this doesn't work use WAMP.
<http://www.wampserver.com/en/>
It's something like XAMMP

For simplicity's sake, it's easier to close a program and start another instead of changing preferences. More user friendly as well since preferences can get pretty bloated and poorly described.
