Thread: [any programs to create programs?](#)

Stabilize - August 7, 2012, 12:26 am

im just wondering if there are any progrmas out there which help me creat other programs, if not what do people create there programs in?

thanks sorry for bad grammar late and on phone

Hepic - August 7, 2012, 12:33 am

What you mean man?

Maybe you mean about complilers.

If you mean this:of course there are programs.

In c++ the best are Visual 2010 c++ and codeblocks.

if you need help to download them or with any language pm me

blady20 - August 7, 2012, 5:33 am

Do you mean the compiler itself, or an IDE? If you want an IDE, here are some of the most popular:

[Code::Blocks](#)

[MS Visual Studio](#)

[DevC++ \(Outdated\)](#)

They all install a compiler for you.

He is wrong, code blocks nor Visual Studio are 'Programs to create Programs', they are IDE which help you to create a program but the real thing happens in the compiler. It makes of code assembly and so runnable for the computer, also this includes linking and such, google if you want the whole

expanation.

Popular IDE: Visual Studio (Win) CodeBlocks (Cross)

Compilers: MinGW (Win) GCC (*Nix)
