Thread: [Circumventing a ban....](#)

xtrasmalls - August 7, 2012, 12:32 pm

How can you change your IP address without using a proxy server that could possibly be harmful to your computer? Also this forum is a self proclaimed "nerd" forum so they don't usually allow proxy's anyway. If anyone can be of help let me know!

ALEX - August 7, 2012, 12:36 pm

Use a Proxy Spoiler ([Click to View](#))badumtzzz

I don't think there is another way to get other IP addresses than proxies, also proxies can't harm your PC (can they?)

xtrasmalls - August 7, 2012, 12:38 pm

I have read that they can... just remember I'm a beginner and this is my only computer and I take all of courses online so I can't chance screwing it up

mrbeard - August 7, 2012, 12:54 pm

yea bro you can use a web proxy

<http://www.hiddenproxysite.com/>

try that

xtrasmalls - August 7, 2012, 1:28 pm

Thanks! But I already got passed what I needed too.

zombieman - August 7, 2012, 1:31 pm

Is there a way to bypass a ban on a phpBB3 forum? Because the damn admin keeps banning me for no reason and falsely reporting my domain names for copyright and removing them. I DDoSed that site, but getting unbanned would be awesome so I could troll them.

mrbeard - August 7, 2012, 1:39 pm

you could use a proxy as mentioned before or hack the DB and remove ur userid from banlist ?

zombieman - August 7, 2012, 2:05 pm

BUT THE DAMN SITE IS virtually impenetrable. The only way is to possibly brute force or keep DDoSing. I was lucky enough to grab some passwords of other users accounts, which I use regularly to browse, but posting or trolling would just set off an alarm. I have the password of a mod, but it's in md5 and havij returned no shit.

xtrasmalls - August 7, 2012, 2:31 pm

I just used the proxy www.hidemypass.com and made a new email account then made a new name

Mr.FluffyBunnyFluff - August 7, 2012, 3:07 pm

hide my ass is really good i bought their vpn its really good

xtrasmalls - August 8, 2012, 10:24 am

It worked wonders! But they ended up banning the ip from there but I just went back and did again. Playing at PI can become a little daunting.

Yes its great as long as you don't do anything illegal.. They keep logs, so that's a nogo for me ?

Phizo - August 8, 2012, 11:22 pm

Restarting your router usually does the trick, assuming you have a dynamic IP.

r4g3d - August 9, 2012, 2:10 am

You can login to a phpBB account using only the md5. Not sure if it works with phpbb3 but it works with phpbb2. ;)

PM me if you are interested in the method.

Creamy - August 9, 2012, 4:40 am

Surprised no one apart from one person suggest turning off your router for a bit to give you a new ip aslong as you have a dynamic ip and not static.

xtrasmalls - August 9, 2012, 12:49 pm

Look they'll know its me just by doing an ip search. There was a specific reason I needed to look like I was from another state. I got the trick done. Now I need to know how to get into this stupid imgur account. Brute force hasn't worked so far.

IllogicalLeaf - August 10, 2012, 11:13 pm

Tor is simple, but if you only need the proxy for one website there are also proxies that you can actually use through your browser without having to install anything. I think Peacefire.org is a site with a large list of these.

Edit: Just saw your last post,

If brute force isn't working, you still need a password, so you're going to have to get it from THEM. I'm not familiar with imgur but if there is a security question it's always a good idea to take a few educated guesses on that. If not try to find out about the protocol for resetting a password and you might just get the admins to do your work for you.

If this doesn't work you'll have to get the password from your target. If you're in contact with them, and know them, you can probably infect them with a RAT or keylogger.
