Thread: [\[TuT\] Spreading method involving SMS](#)

604gse20 - August 7, 2012, 5:06 pm

Hi all,

Here is a new tut with a cool spreading method that seems to work well for me.

All you need is the ability to spam SMS and a source for numbers(I can do this for a small fee, PM me)

There are lots of vendors out there that do this for anywhere from 0.03-0.10 cents per message.

Anyways to the method, what you do is grab your list of numbers. If it is split up into male/female numbers (usually it is not) great.

So what you do is play on the curiosity of others. Send a text message that entices them to open up a link. This is usually what I send.

Hey, Joe (Or Jennifer) gave me your number last night and said you are single. I just broke up with my bf/gf and was looking to get out and meet a few people. I'm 24, blond, university blah blah blah. Check out my bikini pic here (insert link) and let me know if you are free.

Even if the person does not have a friend that goes by that name, curiosity will get the best of some people and you should be able to get some hits to your file.

You can do this to anyone. Modify the message to tailor to older people, milfs, curious husbands etc.

Blast out to a list of 10 000 and you should be able to get a good number.

DestinedForGreatness - August 7, 2012, 5:32 pm

Thats a cool method, So the link you do send them to just redirects to your executable download, how do you mask your executable?

Thanks

604gse20 - August 7, 2012, 5:35 pm

I dont, I should put more thought into that though as it will probably lead to more executions.

How it is now, once people are curious and hooked up about a random easy date with a possible hot chik/guy, they turn into zombies and do anything to find out.

Xp3 - August 7, 2012, 8:01 pm

This is possibly the worst method to get traffic

Minor Ethics - August 8, 2012, 7:20 am

It is probably cheaper and more effective buying installs tbh, after paying for credits on sites such as smsglobal then buying a phone number dump (unless you get your own) you still cant guarantee ppl

are just gonna head to their pc and visit the link.

This may be an ideal method for targeting victims though, but not the most practical for spreading IMO.

Snoepie1012 - August 8, 2012, 7:49 am

Also alot of people would visit this link using there smartphone..

:/

:/

That is a valid point, I didn't think of that, unless u can put a spin o n the original method and have users download so me exploit depending on their smart fone os(if there is any that is)

Overall though I think it's a cool unique method, especially as some1 said above u can laser target individuals.
