Thread: [\[Download\] Private RunPE | 32/64 Bit Working ? | Free For All ? | \[VB.NET/C#\]](#)

Oppresor - August 8, 2012, 6:01 pm

I'm giving away a RunPE I have been using for the past month or so, I haven't seen it anywhere else, but I just was informed it's from the Sikander Source Code for v7 or v8 one of those.

Please do the following if you're going to use.
Post In Thread If You Use It To Keep Thread Up!

Here is the RunPE.

C#

<http://stickypaste.com/view/raw/23116083>

VB

<http://stickypaste.com/view/raw/4882507>

- Oppresor

?

Credits
Sikander (His RunPE)

P.S

Anyone interested in a VB6 Private Crypter?

Click Here -> <https://hackforums.net/showthread.php?tid=2772969>

DeadLine - August 8, 2012, 6:02 pm

Hello sir,

Could you possibly send me a downloadlink for the C# version, it would be greatly appreciated !
Thank you !

Kind regards,

DeadLine

Electron8761 - August 8, 2012, 6:03 pm

This belongs in the referrals section or premium section if you just give to them. Even though you

didn't code this sounds good I guess.

?

I've seen it before. Some people say it's pr0t0typ3's, but pr0t0typ3 denied it. I honestly have no idea

who the creator is.

Although the way those API's are called... It hurts my eyes. ?

Oppresor - August 8, 2012, 9:00 pm

Sure :)

Sent to all that posted!

?

Meerkat.? - August 9, 2012, 9:43 am

I have probably the stupidest question ever. What executables actually work with a RunPE?

I've tried to inject:

.Net into .Net > It just opens the RunPE executable again

Native into .Net > Just opens the .Net app

Native into Native > Just opens the native app

.Net into Native > Just opens the native app

I must be doing something wrong :/

Oppresor - August 9, 2012, 9:48 am

hello girl ,

nice sharing can I have direct link of both Private RunPE's because in my country I cant surverys ?

Advanced - August 9, 2012, 1:03 pm

In need of a runPE.

Please send me the runPE in both languages. (.net & C#)

=-CyBeR=- - August 9, 2012, 1:31 pm

I would like the VB.NET and C# (both) version of this one :D
Thanks ;)

HF~Legend - August 9, 2012, 2:21 pm

I would like this ! Thanks for this sharing.

Delirium™ - August 9, 2012, 4:25 pm

I would like to have the C# version of the RunPE but if it's possible, can I have both? Thank you :)

tweety - August 9, 2012, 5:29 pm

I would like to get this. Although I find it sad that you are giving a direct link to ub3rs and l33t's only when many of them will use it to put onto a crypter and sell it. Maybe instead of a paid status you should check the contribution a member has made, depending on the amount of contribution they will receive either a survey or direct link. However this maybe an attempt of gaining reputation.

Anyways, PM me a link for VB.

DeadLine - August 9, 2012, 6:26 pm

[Eprouvez] - August 9, 2012, 6:39 pm

I would like a copy :) in VB.Net if possible.

DeadLine - August 9, 2012, 6:39 pm

(Aug 9, 2012 06:36 PM)Delirium™ Wrote: [\[CITE\]](#) Are you using CodeDom to compile your stub?
No, I made a simple test application that allows you to select the file you want to run in memory and the process.

I tried it on 2 machines:

Windows XP 32 bit => Succes

Windows 7 64 bit => Fail.

The same files and processes were used.

Oppresor - August 9, 2012, 7:09 pm

Thanks in advance,

~Zero

Oppresor - August 10, 2012, 6:08 pm

Recheck the thread guys, I've made it public because it's not a private RunPE.

AND

Given Credit.

KOCMOHABT - August 10, 2012, 7:28 pm

I just tested this, it works, but avira detected it

this already uses delegates and hides all the api-s

is there a way to find out what needs to be altered in order for it to be fud?

FunnyJunk - August 10, 2012, 7:55 pm

this isnt sikandars he just called the api's dynamically.

KOCMOHABT - August 10, 2012, 8:14 pm

oh wait a minute.. the antivirus shut up when I replaced my long encrypted string with ""
so maybe it only reacts to some element of this runPE if long encrypted string is found within same file?

this tells me that I should be looking for a better way to store my encrypted exe?
(not using EOF btw)

Oppresor - August 10, 2012, 10:07 pm

(Aug 10, 2012 07:55 PM)FunnyJunk Wrote: [\[CITE\]](#) this isnt sikandars he just called the api's dynamically.

No hun, I just checked the leak, it is from Sikanders.

FunnyJunk - August 10, 2012, 10:17 pm

(Aug 10, 2012 10:07 PM)Oppresor Wrote: [\[CITE\]](#) No hun, I just checked the leak, it is from Sikanders.

no what im not saying its not from his crypter he just didnt code the base of it

<http://pastebin.com/Eisge8Kx>

thats the original and what sikandar did is call his API's dynamically to avoid detections, thats it.

KOCMOHABT - August 11, 2012, 1:25 pm

Ok, it looks like I was right, antivirus reacts on something in this runPE when there is a long encrypted string inside the same executable, I had it in one of the modules.

so I tested by trying to store the encrypted string in a regular .txt file instead, antivirus doesn't react, the decrypted bytes are run into the target process and it works :) I would like to say a big thanks to you for sharing this :)

Oppresor - August 11, 2012, 5:20 pm

KOCMOHABT - August 12, 2012, 3:04 am

I would like to add some additional informations about what did and did not work for me:

I had good results when trying this on winXP and win7, 32-bits, but this runPE didn't take just anything

I found that it worked when using vbc.exe or iexplore.exe as host process on XP and, on windows 7 I only tested with vbc.exe. Windows seems to protect some processes from getting hi-jacked, so injecting into notepad.exe or calc.exe doesn't work.

injecting a vb6 made program, and standard windows exe "calc" from XP - RESULT: works :) injecting .NET made programs - RESULT: didn't work :(

in the end I also tried it out on 64-bits windows 7 - RESULT: didn't work :(

I haven't much experience with stubs, but I'd say this one could serve its purpose, the big caveat is that it seems to "spit out" any .NET file I try to feed it, so Oppresor, or anyone else who has tested this, if you can make it take .NET files, I would like to know about it, maybe I should try again to see if it was a decryption failure or something...

KOCMOHABT - August 20, 2012, 8:02 am

(Aug 12, 2012 11:18 PM)versx Wrote: [\[CITE\]](#) You cannot inject into managed processes, plain and simple.

if by managed processes you mean like calc.exe or notepad.exe?

then that is what I wrote in my post, I believe I mentioned that

I successfully injected into vbc.exe

what I am still wondering about is injecting a program made in vb.net, into for instance vbc.exe (since it didnt work when I tested)

I would like to know if there is some restrictions as to what kind of exe files you can inject with this runPE, and then I mean injecting into non-managed processes, just to be clear, that is not the issue :)

edit:

Ok, I tested once more to encrypt a vb.net made program, just a simple "helloworld" type, just to

show a form,

and I tried to make this runPE inject it into vbc.exe.. I get the same result as earlier, it can decrypt it, but it fails when trying to inject.

I eliminated the possibility of something being wrong with my encryption, by putting in a code to write the decrypted file to disk, so that I could manually check if it works. I found that the encrypting/decrypting part is not what fails, it must be the injecting part.

So then I would say it is confirmed (if nobody can claim different) that this runPE will not be useful for your .NET executable malware

Now Im wondering, is there some part of this code that can be altered to make it take .NET executables as well?
or is there some logical reason why it would never work, that I dont know about?

Oppresor - August 21, 2012, 2:26 am

The download link is in the damn thread guys. Stop private messaging me!

KOCMOHABT - September 5, 2012, 7:47 am

This share is really great and I hope nobody minds if I give some feedback about the problem that I had with running VB.NET executables with this runPE. The solution to this is quite simple, you dont even need runPE to inject a VB.NET, but you can rather just load it by using reflection like in this thread:

<https://hackforums.net/showthread.php?tid=612853&pid=5845279#pid5845279>

So all you need to do is to have your program determine if the decrypted bytes are .NET or not, then you can choose to run it in reflection or inject it with runPE accordingly.

I rewrote the example from that thread so it can use a try-catch to find out if it is .NET or not, if not, it will do the runPE.

A different issue is the compatibility with 64 bits.. DeadLine and Delirium (page 8-9 in this thread) briefly touched upon that topic, and as I also have trouble making this runPE work with 64-bits, I would like to ask if anyone knows more about why? I am using visual studio 2008, so forgive my ignorance, but would I have to get a newer version of visual studio to make it work? is that it? That would be nice to know for all other people who are looking into this as well :)

KOCMOHABT - September 8, 2012, 1:25 am

I have been pulling my hair out in frustration trying to make this work on x64, and finally I got it working,
so I'll share a clue here for others who might struggle with the same :)

I found that the C# version actually works on x64, I had only been testing the VB.NET version because I assumed they were completely identical. At first I couldnt get the C# version to work on x64 either, then I

made it into

a x86 .dll-file and it now works on both x86 and x64 :) The problem had nothing to do with the version of

visual studio, but just make sure you compile it for x86. It is not difficult for an experienced programmer (at least a bit)

to make a C# dll-file that can be used by both a VB.NET and C# crypter, so that is my recommendation.

I will not go further into the details, because I respect the principle of not making it so easy for "copy-paste kids" to do this.

conclusion: C# version works on x64, vb.net version only on x86

Both versions work on x86 :)

RunPe is how most crypters become FUD. Just FUD the runPE and you got yourself a FUD crypter. Now you just need to bypass Sonar and KIS

int 0x80 - September 17, 2012, 2:32 pm
