How to use iExpress to bind your filesWritten by Backslash

Pittsburgh_Steelers - February 17, 2010, 2:29 pm

thanks too short.....

Forward Slash - February 17, 2010, 2:45 pm

(Feb 17, 2010 03:29 PM)Br4v0s1cks Wrote: [\[CITE\]](#) thanks too short.....

Thanks, I spent a long time making it.

Browski - February 17, 2010, 2:46 pm

Thanks but im pretty sure this has already been posted. Good job anyways!

???? - February 17, 2010, 2:51 pm

Backlash, Ive been using iExpress to bind files as long as I can remember, and I think youve made a couple mistakes.

[img]http://i206.photobucket.com/albums/bb310/qwerty7777777/7.jpg[/img]

On this one, on the right picture, you dont select your bot first from what Ive seen. Unless they changed iExpress, if you choose your bot first, the second one will never run because it waits for your bot to close til it launches the second program. Ive tested this many times and thats how it works. Correct me if they fixed that.

[img]http://i206.photobucket.com/albums/bb310/qwerty7777777/8.jpg[/img]

This goes with the last one. On the first picture, you click hidden. If you dont, when your bot starts to load it pops up a screen like its installing something. If you put your bot on the second option like I have said, then it looks awful creepy to see your bot being installed, and VERY suspicious.

This is what I have found when I use iExpress.

Forward Slash - February 17, 2010, 2:52 pm

I have used that setting for a long time, it works great.

And the default option I use, but I will change it.

???? - February 17, 2010, 2:54 pm

Thats funny. I will test later, when I can get my bot FUD'd and binded with a program.

-mothered- - February 17, 2010, 4:08 pm

I can say that I've used this method with great results. It's a component of Windows that Isn't widely

shared by Microsoft.

Thanks for the share mate :)

Forward Slash - February 17, 2010, 4:38 pm

Neroxan - February 17, 2010, 7:36 pm

Another note would be to consider the following:

If your bot or malware (whatever it is) that you are binding is already hidden and shows nothing when someone runs it, select Use default when it asks you if you want the programs shown or not. This way the program/file you are binding to looks normal when being opened. ?

Also, anyone can check the properties and see that you used iexpress to combine two files easily unless you remove version info with reshacker or a similar program before sending it anywhere.

I did a search for this, found only 1 other tutorial but with no pictures. I proceeded to make one.

Charity - February 17, 2010, 7:49 pm

Good tut. Thanks for making it with pictures :).

xoxo1 - February 18, 2010, 3:36 am

Thaks for nice tut for newbies like me.

Abstract. - February 20, 2010, 8:22 am

Thanks nice tut!

2short

FakeDeath - February 23, 2010, 11:43 am

Thank you mate you helped me a lot :)

zach3930 - February 24, 2010, 1:47 am

Do you know how to change the image? i dont think people will be opening the program i am spreading with an image like that...

ruhit27 - April 21, 2010, 10:37 am

nice tut man it works

frazdaz - May 15, 2010, 12:03 pm

(Feb 17, 2010 03:52 PM)?ackslash Wrote: [\[CITE\]](#) I have used that setting for a long time, it works great.

And the default option I use, but I will change it.

Using bot as Install Program didn't work for me. Swapping them around did.

M4th3w - May 23, 2010, 2:15 am

Very good tut, thank you very much !

jocke932 - May 23, 2010, 10:45 am

Im getting an error that tells me , error creating Cabinet , what shall i do ? thanks

TheVirus - May 23, 2010, 1:26 pm

Thanks good tutorial =) very nice

SIM-135152 - May 23, 2010, 1:33 pm

i wrote that tut first but thank you anyway it's good

The TakeOver - May 25, 2010, 6:29 pm

Pretty good post, just looking how to bind to IMG.. :-\

MORPH-182 - May 25, 2010, 7:00 pm

Nice easy to follow tutorial, thanks heaps for the share!!

INullkidl - June 27, 2010, 12:16 pm

How can I edit the installer-like icon that results after the bind?

Paultheghost - June 27, 2010, 6:10 pm

^You can change the icon with an icon changer.

<https://hackforums.net/showthread.php?tid=232221&highlight=icon+changer>

<https://hackforums.net/showthread.php?tid=503049&page=3&highlight=icon+changer>

Also, great guide, helped me loads.

T3h Hack3r - July 5, 2010, 4:48 am

Great tutorial, Used it and worked wonders.

Thanks for the share.

harrypage - July 5, 2010, 5:07 am

very nice tutorial, thanks, great share.

bnonymous - July 5, 2010, 5:16 am

Thanks man, awesome tutorial nice pics very detailed will try this soon.

Anonymous.7654 - July 5, 2010, 12:38 pm

Amazing tutorial,im test and worls perfect,thank so much.

Mr.BTC - July 5, 2010, 7:11 pm

nice tut but it can easily be open with winrar :S

so is not so good after all :S

MaryJane - July 6, 2010, 12:25 pm

Thank you very much for this!

-Yo - July 6, 2010, 12:28 pm

It's good, but it's sort of primitive (the program not you), and it's sort of suspicious looking when it's been made, i.e. icons etc.

frybuggy - July 7, 2010, 7:49 am

thank u very much it works perfectly, i tried it with tuneUp and it's OK, BUT MY PROBLEM IS THAT in the original version of TuneUP the description file is:

description:TUNEUP utilitie

society:tuneup software

version:...

size..

...

And in my "version" the description file is:

description:win32 cabinet self-extractor

society:microsoft corporation

version...

how can i change this description file?? bcause it makes it suspicious

thanks!!

People Are People - July 7, 2010, 9:18 pm

Is this still working and effective?

thenoss - July 11, 2010, 4:37 pm

(Jul 7, 2010 09:18 PM)People Are People Wrote: [\[CITE\]](#) Is this still working and effective?

Yes, this is still (and will always be) working and is highly effective.. but make sure you read Toxhicide's post (link below) because what he said is true. (At least what he said about the second program running after the first install is done is).

<https://hackforums.net/showthread.php?tid=276831&pid=2619866#pid2619866>

But Blackslash says doing it his way works fine so I'm not really sure.. try both, what evs.

Also guys, use [ResourceHacker](#) to change the icon and description and whatnot.

Thanks for the great tutorial Backslash ;D

SIM-243923 - July 14, 2010, 6:16 am

Ok i binded my server with this with a program and make a torrent.

i uplaoded the torrent. i got 2 victims out of it. but like 10 minutes after uploading a guy said he found a weird file

that was my server. he only did a right click and extract here.

when you extract the binded file with iexpress your server will extract...

Or do i need to put other settings? help me please!

letssee - July 17, 2010, 5:33 pm

So i am a noob i am sorry but here is my question, you used setup.exe to bind your bot.exe with. What can i use to bind my bot with were could i get this program?

i keep getting an error that says

Error creating Cabinet.

Rampant - November 14, 2010, 5:32 pm

I don't get it i did exactly what you said, but when i try it on me, the fake program won't start o.o but the keylogger work... if only the fake program could start. i could get more victim !

liquidworm - November 14, 2010, 5:42 pm

Thanks I allready knew this but nice reading :) .

???G? - November 14, 2010, 5:43 pm

Subbed and faved this thread, this sure will be useful to spread my RAT later. :D

{ H4cK3r } - November 14, 2010, 8:35 pm

Thanks but im pretty sure this has already been posted. Good job anyways!

(Nov 14, 2010 09:35 PM)***{ H4cK3r }*** Wrote: [CITE](#) Thanks but im pretty sure this has already been posted. Good job anyways!

Thanks for grave digging and look at the date posted. Thanks for reading..

d3vil7 - November 19, 2010, 11:47 am

thns bro really nyc tut :)

Nexum - February 11, 2011, 3:15 pm

Thanks, this is the only tutorial I've found that I liked for using iExpress, I'm not the biggest fan of Video Tuts so thanks again for this.

dmXsta - March 10, 2011, 9:35 am

is this fully FUD?

Spoiler [\(Click to View\)](#) too short

synnergy - March 10, 2011, 9:53 am

i dont think. My iexpress .exes get detected by AntiVir lol.

screenbuster - March 10, 2011, 10:19 am

good work. place these things in Beginner Sections. just suggestion only.

dmXsta - March 10, 2011, 1:29 pm

When I bind them on my computer (64bit) then i try to run it on my laptop (32bit) it gives me a error saying somthing about not compatiabile with 32 bit :/

danbirk - March 12, 2011, 3:09 am

Awesome tutorial ;)
thanks for it m8.

ahmedkulumu - March 14, 2011, 1:11 pm

Amazing tutorial, thank you so much!

sabre23 - March 15, 2011, 3:55 pm

Thanks man..very useful;)

lexi - March 29, 2011, 6:56 pm

Thank you for writing this , well written!

jpatterson82 - April 11, 2011, 6:51 pm

thanks broseph=
messagewaytoshort

Swaino - April 12, 2011, 9:41 am

Only problem is when you run it through sandoxie it shows both processes running, also you can just right click the binded file and open it with winrar and it will show both exe's. . . its good if you

send the binded file to noobs, if not then you will get found out.

tuckismad - May 17, 2011, 11:00 pm

Thanks this tut helped me alot ?

Mosin Khan - May 17, 2011, 11:32 pm

Best free binder. thanks for guide

Dwan - May 18, 2011, 12:58 am

A very detailed tutorial many thanks

hacker536 - June 3, 2011, 5:28 am

thanks for this it really helped me!!!

Vendetta08 - June 15, 2011, 1:49 am

Thanks I'll use this!!?

AneXA - July 19, 2011, 7:14 am

Thanks for this , but i know this from somewhere else.

thaMOBB - August 13, 2011, 6:19 pm

many thanks :D the last part was ecpecially helpful

shadowsreaper - September 1, 2011, 12:43 pm

Thank you for the great tut. ?

V i R u S - November 9, 2011, 4:45 pm

Handy tutorial. Will look back on it.

Mixermath - March 21, 2012, 8:35 pm

Well, that's what hacking is. Using things the way you shouldn't.

denyfebriant - February 13, 2016, 10:43 pm

thanks brooo too short.....

dafr34k - February 22, 2016, 12:02 pm

wow! that's a great tutorial bro, thank you very very much.....

G_LO - March 13, 2016, 11:16 pm

Real nice method you wrote here. Thanks!
