Jacton - August 25, 2012, 9:47 am

since he is banned here, the software is really useless.

Themagicshark - August 25, 2012, 2:12 pm

its not some of you really need to learn to read code. To register create a textfile with the username you want, then put the hwid in the textfile on the web server your using.

SIM-1361621 - August 26, 2012, 10:42 am

Twigraphy - August 26, 2012, 11:51 am

Looks sweet, Great release.

Why when I start debugging does it say copied code to clip board and then it says send it to me?

Robin Van Persie™ - August 26, 2012, 12:30 pm

If you guys knew how to code, you would just delete the HWID protection. It's not hard.

Lol finally a real coder guys, it defeats the purpose of a source if you don't know the language its in. Its like getting a spanish novel and trying to read it, don't try it and complain.
