Thread: [Transferring FTP TO FTP?](#)

Synlax32 - August 14, 2012, 9:22 pm

Online can i remotely transfer files from
[ftp.site1.com](#) to [ftp.site2.com](#) without downloading the files?
Thanks!
?

ThrillerCloud - August 14, 2012, 9:25 pm

you would have to open to filezilla in just transfer them i think so like drag all the files out of the
[ftp.site1.com](#) filezilla in drag it into [ftp.site2.com](#) filezilla box

let me know if it works :) :) message to short is gay :P

Aaron Hernandez - August 14, 2012, 9:29 pm

Just open two sessions of firezilla, then transfer them that way.

Synlax32 - August 14, 2012, 9:38 pm

None of the idea's above worked for me. Anything else Guy's?

Aaron Hernandez - August 14, 2012, 10:05 pm

Have you tried my idea? It works fine for me.

raxe - August 14, 2012, 10:12 pm

You could just do it manually.. Make an archive on Site A, download then upload to Site B. It might take a little longer but at least it gets the job done.

the files are 600MB each... Haha that'd be a while for 60!

It'd probably be quicker depending on the hosting speeds, lol. Well I'll wait until I find a visible solution :)

Exactly what i am going todo it'd be a sweet as app/webapp
?

Aaron Hernandez - August 16, 2012, 1:09 pm

No just open 2 filezillas, not 2 tabs, and do it that way.

I told him the same thing open two filezillas in just drag it out the first one 2 the second one not two tabs

HyperText - August 17, 2012, 1:05 am

Guys I am pretty sure that using filezilla and doing that method does in fact download it from one server then upload it to the other. If you want server to server communication, you would need to do something on the server itself, not your computer.
