Thread: [Public HWID Base](#)

SomeWhiteGuy - September 13, 2012, 1:26 pm

This source is not only VB.NET, it is PHP and MySQL also. If you do not have an understanding of each, then you will not be able to set it up and manage it correctly. This does contain flaws, I am sure of it. If you want help, I will be glad to help when I have the time. I work part time, and when I am not working I am in school; so my time is limited. I'll try and help as much as possible. If you require help, please PM me. Do not post on here, it is hard to keep track of people like that.

Thank you.

[img]http://www.swghf.info/hf/imgs/swg_presents.png[/img]
WhiteGuy's Public HWID Base

Current features (working on news ones as you read this, just wanted to get the beta out.):Online ACP

MOTD (Update via. ACP)

Built in updater (Update all users via. ACP either immediately or upon application restart.) *WIP

RT Messages *WIP

One method of "protection" (So far, working on more. -- Credits to Kommon. -- Given in the source.)

Lockout user after X amount of failed logins (Settable) *WIP

Specific amount of failed logins allowed (Settable) *Eh

Allow free-registration or require a serial to be entered. (Settable)

Built in password recovery.

Banning w/custom reason displayed upon trying to loginBan via:IP

Username

Mass emailing to every registered user for updates and shit like that *WIP

ACP QuikStart™ - Load the site to the ACP if the Client identifies you as an Administrator.

Exception Handling(View the exceptions submitted on the ACP)Info about the users computer submitted:Operating System

Operating System Platform

Total Physical Memory

Available Physical Memory

Total Virtual Memory

Available Virtual Memory

Installation Path

Info about the actual exception submitted:HResult

The type of the exception

The source of the exception

And the TargetSite of the exception

Please note:

ACP QuikStart™ is not trademarked, I just think it looks bad ass; Get over it.

Anything marked with *WIP is a Work in Progress and is not included in this release, but is planned for future development. Anything marked with *Eh is buggy and has been disabled/compltey removed from this release for improvement; pending release during the next update.

Since I plan to continue development on this for quite a while, I've included a Source Updater that is an executable file. Upon being ran, it will check a file I host online for another version and if it is not the same as another file that holds the current version then it will prompt you to download the newest version of the source. I've included 2 separate downloads; one that includes the updater, and one that doesn't. Considering some people will be hesitant since it is an executable file and I am not providing a virus scan for it (and I will not, scan it yourself. I'm releasing a whole fucking source to a website and a VB.NET app; shit. /rantover) so download whichever one you want. It's just a matter of personal preference I supposed.

Thank you everyone for your interest.

It should create 5 separate tables. Named: `hwid_logs`, `hwid_users`, `hwid_exceptions`,  
`hwid_admins` and `hwid_serials`.
```

Video on setting everything up:

[Video: <http://www.youtube.com/watch?v=eliSWWOOfXA&feature=plcp>]

I hope you like it, and please let me know if there is anything that I can improve on or add to it; I'm always open for suggestions! :)

fillobotto - September 13, 2012, 1:31 pm

Selling a product of mine, I figured out that the HWID is not so unique. I found something like 5 pairs of identical HWIDs. So I suggest to implement an algorithm for key generation.

nrd - September 13, 2012, 1:33 pm

this looks good keep it up, has nice features and thanks for the source release will be downloading and checking it out in a bit ?

connorbp - September 13, 2012, 1:33 pm

That looks sexy dude! :P i may try converting this over to Delphi later aswel :)

Khaos Theory - September 13, 2012, 1:34 pm

This actually looks really nice. I think I'll give it a try and see how everything works.

Tidas - September 13, 2012, 1:37 pm

Fuckin sexy shit you got here meng.

SomeWhiteGuy - September 13, 2012, 1:46 pm

I'll work on some bugs and update the thread when I get home. Bout to head into work atm.

Eternal Five - September 13, 2012, 1:48 pm

Nice! Now the question remains: How secure is it?

Perplexity - September 13, 2012, 3:01 pm

Don't see why someone would have to type their username AGAIN, I recommend you remove that, it's pointless.

SomeWhiteGuy - September 13, 2012, 7:25 pm

(Sep 13, 2012 03:01 PM)Perplexity Wrote: [\[CITE\]](#) Don't see why someone would have to type their username AGAIN, I recommend you remove that, it's pointless.

Because that's how I want it. It's a source, if you don't like it: remove it before publishing your application if you even use it.

(Sep 13, 2012 01:48 PM)Eternal Five Wrote: [\[CITE\]](#) Nice! Now the question remains: How secure is it?

It's only got one method of "protection" so far.

Working on creating/finding more that actually work.

Ace™ - September 13, 2012, 9:45 pm

Excellent, would love to try this out for my projects.

RKYDA - September 13, 2012, 10:45 pm

this looks good keep it up, has nice features and thanks for the source release will be downloading.

N3me\$!s - September 14, 2012, 12:22 am

It looks great bro

going to pm you right now :D

sickoryy - September 14, 2012, 3:51 am

looks really awesome ;) i would love to have this.

Pming you now

thanks in advance

khanrose - September 14, 2012, 5:29 am

thanks for the share

can i get this?

xDowwdeen - September 14, 2012, 6:12 am

Heyyy

Please can i have this. WOuld be interesting to test

-xDowwdeen

SomeWhiteGuy - September 14, 2012, 7:17 am

I'll respond to everyone as soon as I get home from school. Please be patient.

Thank you.

mrstean - September 14, 2012, 7:45 am

Wow amazing piece of software man, i would like to give this a try (=

Thanks,

F0UNDER - September 14, 2012, 7:46 am

Darn ! Amazing job, i was looking for something like this for my upcoming project. Amazing job bro. PMing you now.

Daylloween - September 14, 2012, 7:49 am

Where's the source? Is it an ub3r attachment?
Nvm

xQQ - September 14, 2012, 7:58 am

This is exactly what I was searching for! PMing you for the download right now.

Hopsin - September 14, 2012, 8:20 am

I have just sent you an PM, hopefully i'll get it. Thanks indeed mate!

ytlayol - September 14, 2012, 8:25 am

Seems cool....would luv to check it out....so yeah PMing u now

Yui Asuna - September 14, 2012, 9:53 am

Yeah, can you send me that please ? :)

It might help me, since I'm learning VB.Net !

Pm'ing you now bro !

The MammoTh - September 14, 2012, 9:54 am

Not better then my Login System but it's free. Good Job.

CakePHP - September 14, 2012, 10:49 am

Hello guy, i pm you because i'm very interested ! :)

li0nsar3c00l - September 14, 2012, 11:03 am

im really interested in this. will follow your progress

RKYDA - September 14, 2012, 11:58 am

When you back to your home , check your mailbox if you agree, send me the source please

EnhancedMobi - September 14, 2012, 12:00 pm

may i please get this sir please and thnak you!

Hopsin - September 14, 2012, 12:01 pm

I have received it, thanks indeed OP :)
Vouch.

SomeWhiteGuy - September 14, 2012, 12:07 pm

(Sep 14, 2012 11:58 AM)D[a]rk[y] Wrote: [\[CITE\]](#) When you back to your home , check your mailbox if you agree, send me the source please

I sent it to you. :p

...and everyone else!

Thanks for the comments everyone, sorry for the post and PM shit. :c

Glad some people are interested though.

CakePHP - September 14, 2012, 12:57 pm

I PM you, please check your message box if you agree :)

Thanks for the sharing and Thanks in advance !

sickoryy - September 15, 2012, 12:41 am

Thanks for the answer ;) looks nice.. Where i can set the login details from the acp?

Thanks in advance

SomeWhiteGuy - September 15, 2012, 5:50 am

(Sep 15, 2012 12:41 AM)sickoryy Wrote: [\[CITE\]](#) Thanks for the answer ;) looks nice.. Where i can set the login details from the acp?

Thanks in advance

You'll have to add the first user manually via mysql or remove the check on the index.php file that blocks access so you can add an admin then add the check back.

RKYDA - September 15, 2012, 4:29 pm

Please help me!

[\[img\]http://image.noelshack.com/minis/2012/37/1347751728-my.png\[/img\]](http://image.noelshack.com/minis/2012/37/1347751728-my.png)

My Skype is:Tmljb2xhcw

Percocet - September 15, 2012, 9:37 pm

It's not letting me sign into the Admin Panel. There's something going wrong...

I have NO PHP skills so I can't find it...

Routess - September 16, 2012, 2:00 am

I cant even open it ! Please Help me !

Hopsin - September 16, 2012, 2:18 am

(Sep 16, 2012 02:00 AM)Routess Wrote: [\[CITE\]](#) I cant even open it ! Please Help me !

You need to set it up you know. Otherwise it won't work.

Mr. Bot - September 16, 2012, 8:32 am

Thanks for this release but I got same problem as ?Example.

(Sep 15, 2012 09:37 PM)?Example Wrote: [\[CITE\]](#) It's not letting me sign into the Admin Panel. There's something going wrong...

I have NO PHP skills so I can't find it...

RKYDA - September 16, 2012, 9:39 am

If one guy know how to do that , can add me skype (Tmljb2xhcw) to explain that at me please

SomeWhiteGuy - September 16, 2012, 5:59 pm

(Sep 15, 2012 04:29 PM)D[a]rk[y] Wrote: [\[CITE\]](#) Please help me!

[\[img\]http://image.noelshack.com/minis/2012/37/1347751728-my.png\[/img\]](#)

My Skype is:Tmljb2xhcw

The username is wrong or the host name is wrong.

@Everyone else.

You need to open the index.php file, remove the ENTIRE PHP part at the top, load the index and then create an admin user through the 'Create Another Admin' tab and then add the PHP part back.

This source is not only VB.NET it is PHP and MySQL also, you need to have a basic knowledge of each in order to maintain the system and set it up correctly.

VPN - September 17, 2012, 12:16 am

Waiting for your job done, thanks for releasing the source although.

1n9i9c7om - September 17, 2012, 10:18 am

Thanks for the Source! :)

I think I beginn selling Programs again, Thanks :D

Insano7 - September 17, 2012, 1:49 pm

Very nicely done, I am looking forward for the future updates.

SkyRider2 - September 17, 2012, 4:04 pm

Good job, But i would rather use Seal net

1n9i9c7om - October 21, 2012, 7:55 am

Is this project still active? I like this source :D

0x42 - October 21, 2012, 8:16 am

Look like pics are down.

Are you using PDO or files?

sandaasux - October 21, 2012, 8:43 am

link down ploease fix it, wanna look at this badly

SomeWhiteGuy - October 21, 2012, 12:37 pm

I'll upload the pics and fix the download link as soon as I get home! :)

ArSkHelios - October 21, 2012, 1:07 pm

(Oct 21, 2012 12:37 PM)SomeWhiteGuy Wrote: [\[CITE\]](#) I'll upload the pics and fix the download link as soon as I get home! :)

I was just about to say broken links and images. Thanks for updating.

Doctor07 - October 21, 2012, 3:22 pm

This looks raw as fuck, not gonna lie man.

Some nice shit right there.

SomeWhiteGuy - October 22, 2012, 8:01 am

Updated the links and shit. Everything should work now. ?

elmoo32 - October 22, 2012, 2:25 pm

Works perfectly, needs a bit of PHP, HTML and MYSQL knowledge but if you have that - it will run perfectly.

Now I need to encrypt everything ;)

Giannidu13013 - October 25, 2012, 4:37 am

Hello,

I am looking for a person who pourait help me configure the HWID of SomeWhiteGuy because I can not I have a hosting provider with mysql database to give but I do not understand ...

Cordially.

Pumpkins - October 25, 2012, 7:01 am

Its nice, good job with it. How unique are each of the HWIDs?

SomeWhiteGuy - October 25, 2012, 7:36 am

(Oct 25, 2012 07:01 AM)Zakary Wrote: [\[CITE\]](#) Its nice, good job with it. How unique are each of the HWIDs?

They're completely random. So, pretty unique.

Remove all the PHP shit at the top of the index.php file.

Add an admin under the tab that says so

Then add all the PHP back.

IYS-Security - October 26, 2012, 11:34 am

i pm you the tv but where r u ?

im waiting you

Giannidu13013 - October 26, 2012, 1:19 pm

(Oct 26, 2012 11:38 AM)SomeWhiteGuy Wrote: [\[CITE\]](#) Yes, it is set up correctly.

PM me your TV info.

Can you help me by teamviewer to set my HWID?

SomeWhiteGuy - October 26, 2012, 2:00 pm

I released this source, and have it fully commented. From the JS to the VB.NET to the PHP. I don't know what else y'all expect me to do.

Do NOT download this if you do not understand PHP or VB.NET!

I cannot help everyone. While I do try too, I cannot. I am sorry.

Giannidu13013 - October 26, 2012, 4:30 pm

Is that password supposed to be stored in plain text? >_>

SomeWhiteGuy - November 19, 2012, 6:54 pm

(Nov 19, 2012 11:40 AM)Aeonhack Wrote: [\[CITE\]](#) Is that password supposed to be stored in plain text? >_>
No, it's not.

It's stored using the crypt() function with a randomly generated salt.

@Person that posted that pic,
you're not doing it correctly.

This is why I specifically said in the OP: "This source is not only VB.NET it is PHP and MySQL also. If you do not have an understanding of each, you will not be able to set it up and maintain it properly."

MeSriNeHC - November 27, 2012, 1:23 pm

Whhhhooo Ty i need this Source :D !!

facebookdoom - November 27, 2012, 2:24 pm

After debugging around with the firefox js console I've figured out why it doesn't work.
How to make everything important work:

First issue: php/acp/login.php & php/acp/index.php
Spoiler ([Click to View](#))

The issue is in this line which is supposed to load the jQuery script.

Code <script type="text/javascript" src="resources/scripts/jquery-1.7.2.min.js"></script>

But in the resources/scripts folder there is no such file, only jquery-1.3.2.min.js which was spelling mistake from the OP I assume.

So to fix it you change the line above to

Code `<script type="text/javascript" src="resources/scripts/jquery-1.3.2.min.js"></script>`BUT
I would suggest to change the line to

Code `<script src="http://code.jquery.com/jquery-latest.min.js" type="text/javascript"></script>`Which
gets the latest version always, better to be up-to-date :)

You will have to update those changes in acp/index.php and acp/login.php

You can also remove

Code `<script type="text/javascript" src="resources/scripts/jquery-ui-1.8.22.custom.min.js"></script>`
since that script doesn't exist either.

Second issue: php/login.php

Spoiler ([Click to View](#))

Banning doesn't work, here's a simple fix.

<http://pastebin.com/hxZdj78y>

in Functions.vb you'll have to change the line #63 to Code `MessageBox.Show("You've been
banned. The reason is as follows:" & Environment.NewLine & str.Split(":")(1) &
Environment.NewLine & "U dun goofed, lawl.")`

And last, is not really an issue just don't forget to change \$link =
"http://hwid.swghf.info/php/validate.php?uid=". \$id."&key=". \$key; in email_validate.php

This should fix everything you need to get started.

SomeWhiteGuy - November 27, 2012, 3:55 pm

Good. I really like it so far, may even push few updates for it. Another issue is that your way to get hResult from the exception is not working, there's Marshal.GetHRForException(exception) but the value is too often the same, even if the exception is being thrown in a different function than the previous one, so one would need another identifier for the exceptions. And you don't need to declare the variables to null in PHP before trying to use them, as soon as you create one it'll be available in the local scope.

SomeWhiteGuy - November 27, 2012, 6:43 pm

(Nov 27, 2012 05:38 PM)facebookdoom Wrote: [\[CITE\]](#) Good. I really like it so far, may even push few updates for it. Yea I know, my friend told me that also, I don't anymore, but at that moment; I was just like "yolo". ?

Edit: And about the hResult, alright. I mean, a lot more shit is submitted about the exception, the hResult is not the only way to tell the exceptions apart.

facebookdoom - November 28, 2012, 6:05 am

(Nov 27, 2012 07:43 PM)SomeWhiteGuy Wrote: [\[CITE\]](#) Yea I know, my friend told me that also, I don't anymore, but at that moment; I was just like "yolo". ?

But that's the issue. If hResult is the same, then the new exception won't be shown in the acp, because the hResult for the new exception was the same as the previous one and thus 'Occurrences' gets incremented.

soviet87 - November 28, 2012, 10:35 am

Thanks for acutally sharing a download link. This is very helful. I am going to check this out, the hardest thing I am struggling with it communciating with a php script, but your code should make it much more easier for me, again, thanks for your contribution.

iMumblez - November 28, 2012, 2:09 pm

This looks pretty cool, Im gonna try it out ;)

SIM-747559 - November 28, 2012, 7:10 pm

This question isn't necessarily aimed at OP, as I know he has stated multiple times throughout the thread that anyone using this should be capable of understanding how to set it up as far as the mysql and php goes.

Anyways I have:

1. Got rid of .txt extension in htaccess.
2. Added MySql db,host,user,pass to both config files.
3. Deleted php code in index.php that checks the user and password.
4. Ran the SQL code in phpMyAdmin which succesfully created the 5 tables.
5. When I visit my index.php page, I am getting this: Spoiler [\(Click to View\)](#)

Any pointers or help in resolving this issue would be greatly appreciated!

SomeWhiteGuy - November 28, 2012, 7:17 pm

Access is denied. Are you sure localhost is the host? You don't have a specific host name? The password could be wrong.

SIM-747559 - November 28, 2012, 8:48 pm

(Nov 28, 2012 08:17 PM)SomeWhiteGuy Wrote: [\[CITE\]](#) Access is denied. Are you sure localhost is the host? You don't have a specific host name? The password could be wrong.

That is the thing. In both config files, my host is listed as "mysql12.SPAM.com". I also double checked the password but will take a look at that again. Appreciate the help man!

EDIT: on the config.php file at (File: /public_html/php/acp/config.php), there are two variables, \$acp_path = ""; and \$root_dir = "";

What should we put in for the strings? Thanks

SomeWhiteGuy - November 28, 2012, 8:57 pm

acp path by default should be /acp or something along those lines.

If there's nothing in them already, then I'm pretty sure that means I created them and forgot about them lol.

I'll get back to you on that. Haven't touched this in a while.

SIM-747559 - November 28, 2012, 9:03 pm

You have to bypass the login form by deleting all the PHP code in index.php. Then go to your index.php path in your web browser and create an admin account from there. PM me and I can try my best to help you.

Haseo™ - December 3, 2012, 9:36 pm

This looks great you did a wonderful job sir. Keep up the great work! (psst I hope to see more of your talent)

I'm not sure why VBE 08 let me put it, lol. I tried VB 8, VB 10, and I'm trying VB 12 now. On VB 10, it says required Framework 4.5 and I have 4.5 installed, I'm not sure what's wrong there.

SomeWhiteGuy - December 5, 2012, 9:57 pm

(Dec 5, 2012 10:00 PM)XxTrixTarexX Wrote: [\[CITE\]](#) I tried VB 8, VB 10, and I'm trying VB 12 now. On VB 10, it says required Framework 4.5 and I have 4.5 installed, I'm not sure what's wrong there. I'dk, it's weird. I ended up just removing that part because it wouldn't work in the VS 11 beta.

Having the same problem. Can you give us a quick tut to fix that feature or should we just comment out the line and disregard the error handling feature for now?

SomeWhiteGuy - December 5, 2012, 10:18 pm

The error handling feature will still work, it just won't submit the HRESULT.

I'll look into it tomorrow, gotta go to sleep lol.

Tidas - December 5, 2012, 10:24 pm

I'm getting

Type 'settings' is not defined. (in loginform)

facebookdoom - December 6, 2012, 8:44 am

Just use Marshal.GetHRForException

<http://msdn.microsoft.com/en-us/library/system.runtime.interopservices.marshal.gethrforexception.aspx>

(Dec 5, 2012 11:24 PM)Tidas Wrote: [\[CITE\]](#) I'm getting

you didn't reference the dll that came in the download.

Tidas - December 6, 2012, 3:58 pm

Well shit. I didn't even know there was one, LOL.

Thanks.

EDIT: Didn't fix it :(

facebookdoom - December 6, 2012, 4:19 pm

Thanks.

EDIT: Didn't fix it :(

If you imported the namespace and everything, then it should fix it. Otherwise simply make your own Settings class. It's not more than few Properties. You can open it in reflector and see for yourself.

TecnicoInformatico - December 6, 2012, 4:20 pm

Hi, update the source with this fix

<https://hackforums.net/showthread.php?tid=2786877&pid=28427654#pid28427654>

I've got a huge list of things that I will be updating in about 2-3 weeks. I've gotta wait until I have time.

TecnicoInformatico - December 7, 2012, 3:50 am

Don't worry, it's only for those who download the source ;)

psychoduke - December 17, 2012, 7:34 am

Contacted you in skype - found a few bugs && the ACP QuikStart™ ;) also wont work for me :s

Cant contact you via pm (ive got less then 10 posts)

SomeWhiteGuy - December 17, 2012, 7:35 am

I know it doesn't work. That's because I didn't include one of the files.

Ah okay, well, ive looked for "Allow free-registration or require a serial to be entered. (Settable)" and didnt found it.

Well, anyway it would be awesome if you accept my contact request in skype :)

I will when I get back from school.

soviet87 - December 25, 2012, 7:00 pm

I already commented on this once, first off, great release SWG, very high quality. I am having an issue really, nothing with your release, I am having a few php woes and I was wondering if I could get a little help from the form, What version of php are you running? if you could be kind enough could you get me the output from the info.php file (You might have to create one, if so place it in your var/www/html/ and use this " code....

```
"<?php
phpinfo();
?>"
```

Are you running this on a locally hosted Linux box? Or a site? I am using this on CentOS 6.3. I am 100% certain that is not SWG problem, as I am experiencing this issue with other php files. I am decent in MySQL and Vb.net, I am still learning php and find it very fascinating. Thanks for you time.

Read the thread, and stop leeching.

Jet Stream - January 10, 2013, 11:56 am

Looks awesome dude!

I am definitely going to use!

VPN - January 11, 2013, 9:07 am

Wait.. where to generate serial numbers ?

SomeWhiteGuy - January 29, 2013, 11:25 pm

I plan on updating this some tomorrow. Might take me a couple of days, but I'm going to switch all the DB interactions to PDO. A lot more secure, and completely eliminates the possibility of SQLi.

Thank you everyone for your interest.

SIM-747559 - January 30, 2013, 12:38 pm

Awesome! Can't wait to see the updated release!

Gummy - February 4, 2013, 3:25 pm

Thanks for the contribute its very helpfull

Envyous - March 3, 2013, 8:41 am

Absolutely amazed at this release!

Got a bit stumped with the login screen since needed to update the jquery script but apart from that its sweet!

iback - June 2, 2014, 1:19 pm

how generate a serail number and why there is no option in admin panel to generate it it can better php is arent fixed doesnt work so good

SomeWhiteGuy - June 2, 2014, 1:21 pm

(Jun 2, 2014 01:19 PM)iback Wrote: [\[CITE\]](#) how generate a serail number and why there is no option in admin panel to generate it it can better php is arent fixed doesnt work so good

I know it's shit. I've posted several times and told countless members that this source is outdated and should not be used.

Eventually I will get around to remaking it.

For now I suppose I'll close this thread since people seem to not understand what I've been saying.

SomeWhiteGuy - November 11, 2014, 3:28 pm

I am remaking this completely now.

Haven't coded in quite some time, might take me a little while.

Expect a re-release within a month.

SomeWhiteGuy - November 21, 2014, 10:53 pm

Update 22.11.2014

Completedphp sideRegister

Login

Ban

Pass recovery

Location validation

vb sidenone

Notes

most of the php is done for the client interaction. next on the php agenda is the acp and admin standpoint.

SomeWhiteGuy - *November 24, 2014, 7:56 pm*

Update 24.11.2014

Completedphp sideRegisterNEW - changed the method in hashing passwords. more secure now.

LoginNEW - added an option to never send your password to the server. (e.g. client side pass verification). note this is only for logging in. your password will be sent to the server during registration.

Ban

Pass recoveryNEW - added what I'm calling "OneTime Key" -- a randomly generated key is supplied to the user upon registration that allows them to use the key, one time, to reset their password. upon claiming the key a new one is generated and displayed to the user.

Location validation

vb sidenone

Notes
