Thread: [\[Mini IDE\] ZDE \(VB.net\)](#)

[ZERO] - August 20, 2012, 6:45 am

[img]http://img255.imageshack.us/img255/312/91207758.png[/img]

Hello there fellow HackForums coders!

I'm releasing my old little IDE that I used before to debug my applications built with VB.net (mostly crypter stubs, since this little IDE runs 40x faster than the regular Visual Studio IDE). I hope that some of you will find this little app of mine useful for your needs, and of course if you are interested in anything about it, please leave a comment and I'll be more than happy to reply to you. Now, here are some features that ZDE has :

- Code Completion
- Syntax Highlighting
- Resource Management
- Manifest Management
- Error Reporting

That's it I guess, I never went into making this bigger because this was all I needed for removing detections from my crypters.

Download Here : <http://www.mediafire.com/?27cxirpw7si2xcr>

Enjoy!

~Zero

Ethernal Five - August 20, 2012, 6:48 am

Why is it an setup? Couldnt you just create a stand alone executable with ilmerge?

[ZERO] - August 20, 2012, 6:54 am

I did, setup is there so it can install the app properly - since I've deleted it countless times from desktop.

This is basically a Codedom builder with a fast coloured textbox?

[ZERO] - August 20, 2012, 7:12 am

Yes it is, but with Autocomplete & Syntax Highlighting features. Very useful if you ask me. :)

That's also technically the Visual Studio IDE. Lol.

Exactly, I was thinking the same thing. :)

Has it got the ability to open files/vb files/modules/projects etc? If so then you my friend have made a great contribution. Also would it be possible to add in templates? IE - A template for forms so the designer will already be written up.

Touche ;)

+Bourbon - August 20, 2012, 7:20 am

No open source? okay :(

Good job though bro

marvinn - August 20, 2012, 7:23 am

No form designer or something? I don't see it in the pics anyways. Good job :)

The MammoTh - August 20, 2012, 7:23 am

Very good indeed. If it was Open Source it would be a great contribution.

Meerkat.? - August 20, 2012, 8:21 am

Does it support project files or single files only? Anyways, looks like a very useful program if you want to change a quick thing here and there and compile your executable :)

Ingenuity - August 20, 2012, 9:52 am

You've neglected to mention the fact that almost all of the functionality is done by the editor from qWhale - so you did actually write the code completion or the syntax highlighting yourself.

DeadLine - August 20, 2012, 10:26 am

This looks really amazing, I was thinking of doing something like that myself. Great job man !
I wish it was open source.

Percocet - August 20, 2012, 12:00 pm

Seems like a pretty good app. Good job.

[ZERO] - August 20, 2012, 12:22 pm

Thanks for all of the positive commends guys and it's not a big deal, if you want the source of it be free to PM me. And as for the negative comments, guys - get a life. Don't like it? Don't post it! ;D
