(Jun 5, 2012 10:58 PM)Inspector Gadget Wrote: [\[CITE\]](#) first impression was brilliant!

opened the folder 2 files hwid scanner and the crypter itself, so simple!
login was activated in a couple of minutes

First few minutes i was having issues with the updater but after i gave up seeing if there was an update i got it opened up and got to work.

The layout is awesome! simple and explained really well anyone could use it.

I had a little issue with the icon selection so maybe add a couple of .ico files into the pack as i had to find one from google to use.

Clicked crypt and within 3 seconds it was on my desktop crypted and fully working, although it did keep opening "my computer" when i run the crypted rat.

This crypter is worth every penny!

Ease of use 9/10
gui quality 10/10
looks 9/10
speed 10/10
functions 5/10

bug to age ration 8/10 very low ammount of bugs for such a new crypter.

Here is a quick breakdown:

Review: Before buying, I was a tad skeptical and decided to contact him via skype, as soon as I added him, within 5 minutes he accepted me and the deal was underway. He advised me to use the AutoBuy feature, and I did so. Once the process was completed my crypter was working out of the box. Activated. I asked him questions, and he answered all of them. I scanned the EXE and ClamAV found it out of 32 other anti's however within 10 minutes the owner of this crypter pushed out a new update. Love this, HIGHLY recommended.

Looking forward to see the update. Good luck.

Also when do you plan to make RazorCrypter able to crypt .net app's?

FractumSeraph - August 22, 2012, 1:40 pm

Just letting new customers know. We have gone without an update for weeks, and the only AVs that can pick it up that I'm aware of is Dr. Web (Which I don't see very often) and EST. So it's a great crypter! (This is with DarkComet, and keep in mind that Dark Comet actually has a program that will remove the virus from your computer even if it's crypted.)

Arckos - August 22, 2012, 2:33 pm

Changelog:reFUDed

Added RIBSSystem with AutoIT Loader (don't worry the C++ Loader is comming soon)

ToDoList (for next update(s))

-Adding FileInstall option (saving to Appdata/Temp etc)

-Adding C++ Loader

- Adding VB6 Loader
- Adding Delphi Loader
- Maybe adding Java Loader

XOwnage - August 26, 2012, 10:11 am

Get your 5.0.0 now , new revolution started ;)

Awesome,thanks.Waited long time for this.Just wanted to ask about the file that is created after the file is opened.Looks really suspicious and if the user deletes it after he opened the file , will it damage it in any way and will that prevent him from starting up after pc restart?

if you know why there is a dropped file:

the main .exe (the loader)

needs to give the stub some data (wich are encrypted in that dropped file)

this "drop" will be in temp or appdata soon.

Gotta update the 20 avaivable Stubs now (maybe you understand now why i needed that much time lol) :D

"News:

Hello (: Here are some news:

The RIBSS update is nearly done, i solved a few problems and am fixing the last bugs now. I will make some tests and will hopefully be able to release it soon.

Also in future all our products will be handelt by an launcher. That means that you can launch all our products with one click from one programm.

Here is a screenshot of the beta version i builded:

Also the RIBSSystem will choose 1 out of 10 (maybe later more) avaivable stubs randomly. That will increase our FUD times.

Also lemme explain RIBSS a bit:

Crypter crypts your file > writes the encrypted data in an C++ .exe that i name the RIBSSL(Razor's internet based stub system loader).

So the output .exe doesn't even contain the STUB (!).

Another pro for that method is, that it will only add a few KB to the original filesize.

The Loader download a random stub from one of our servers and run's it and give's the stub the encrypted data. This all happens in Memory. So there are a few things that are really good: Your encrypted data doesnt get dropped everywhere, the stub also only is temporary stored in the momory. so the AV companys will not be able to distrubute the stub itself. the only thing that can be distributet is the loader, wich only contains really basic C++ funtions, wich will not get detected because it would cause too many false positives for other programmes. You see i put a lot of work and all my avaivable knoweledge and ideas in this project. I am sorry that there wasn't an update for that long time, but i can promisse you all it's worth waiting for it.

Regards, Razor.

PS: If you have any questions about the crypter/RIBSS don't be aware to ask (:"
