Thread: [code for make the background stay on the same position?](#)

HackMo?o?N - August 23, 2012, 9:14 am

How are you?

i would like to know the code for make the background stay on the same position even if you scroll down for see other part of the website
example

```
body {  
  
    background: black url(http://example.com/example.jpg) center;  
  
}
```

thank you

That bit would have to be done through css

Code body
{
background-image:url('the image');
background-attachment: fixed;
background-repeat:no-repeat;
background-position;;
}
Something like that I think

HackMo?o?N - August 23, 2012, 10:03 am

how are you?

thank you for help that help

No problem at all. You should check out the website links below, there pretty handy for CSS if you don't know something.

<http://www.w3schools.com/css/>
<http://www.w3.org/Style/CSS/Overview.en.html>

there's a lot more than that haha

No, <http://www.codecademy.com/learn>

And:

background: #000 url("") fixed no-repeat center;

Save some lines and frustration later on.
