Spoiler ([Click to View](#))

By [Eternal](#)

Other threads of mine on anonymity:

[How to set up a VPN on your phone](#)

[How to torrent anonymously](#)

[How to get IP addresses from the steam client](#)

So, you are here because you want to be anonymous online. You do not want to be tracked by website or scammers or anyone with a malicious intent. There are a lot of reasons to want to be anonymous online, and there are a lot of ways to achieve this goal. I am going to go over the most popular routes.

First let me first go over some basics.

When on a forum, always use a different name on each one. By doing this, people cannot track your activity on other forums.

Never use your real name, this one is obvious.

Don't allow tracking cookies.

Limit Java scripts.

Do not use addons to your browser.

Clear your cache often.

Use a proxy on skype so no one can resolve your ip address.

Create disinformation to keep people off of your trail, following false leads with fake information.

Create a new identity - [Click here for a new identity](#)

Above all else, do not be stupid online. If you try to do something that will get the FBI on you, they will find you.

Every time you open a web browser you request a ip address of the website from your DNS server, and they are cached on your computer. This allows you to be tracked.

In the download portion of this tutorial there is a program called Ccleaner, aka Crap Cleaner. It can clear your cache, dns settings and flash cookies, which are the worst kind of cookies.

Flash cookies are harder than regular cookies to get rid of, and they track you just like all cookies. Make sure to delete these.

Download ccleaner and create a batch file to easily clean your browser of cookies and dns cookies when you are done browsing. Code "C:\Program Files\CCleaner\CCleaner.exe" /AUTO
ipconfig /flushdns

Virtual Private Networks (VPNs)

A VPN will route your traffic through a 128 bit encrypted tunnel through a server, showing the public the server's IP address and not yours. I cannot stress enough the importance of using a VPN if you want to hide your traffic online.

This will even hide your traffic from your ISP, so if you are getting warnings from torrenting, provided your vpn allows torrents, you will no longer receive complaints from them. A VPN can be tracked as easily as your own IP address however if the VPN owner keeps logs of your traffic. I suggest finding a VPN that does not keep logs. Do not trust free VPNs to not keep logs.

I suggest ?NIGMA VPN, and no I am not paid in any way to promote it, nor am I affiliated with it in anyway, I bought it, and because I was so impressed with it I befriended ?NIGMA and found out all I could about the product. He isn't a reseller, he is the owner, creator and operator of it, and he does a good job. I have used other VPNs, and they did their jobs but some kept logs, and were was more that \$5, which is the current price of ?NIGMA VPN. ?NIGMA VPN: [\(Click to View\)](#)

Proxies

Proxies are also method of hiding you IP address, much like a vpn they reroute your IP address through a server. The difference is there are more options, and more issues as well. You can use proxies in your web browser, torrent client and there is even a firewall that allows proxies. I personally only use proxies for my torrent client, however there is other uses for them if you don't already have a VPN. For a list of proxies see this thread: [Black Shadow's Proxy list](#)

Tor

In the download section of this tutorial is Tor, which is a way to stay anonymous by using various proxies configured in their browser, they give you insightful tips on how to use their product so I won't go over it, but you can see it in the download link.

Are you secure?

To make sure you are anonymous you need make sure your computer is secure. Run a virus scan, check for malware and make sure you are not infected. If you are, you are already compromised. If you think you are compromised follow the instructions in the whitehat help section of this forum.

Encrypt your information locally- To keep yourself secure you should also encrypt your hard drives, that way the data is secure from anyone who doesn't know the password to them. Try true crypt in the download section of this tutorial, it's comprehensive and free.

Use a Key Scrambler- A key scrambler scrambles your keystrokes so that keyloggers cannot log your passwords and information. For instance, you type something, lets say you type "hf is awesome" the key scrambler would type something like "sdlskd 54sd5s4fds5dfs20" That way no one would be able to use a keylogger on you. You can find a link to s freeware key scrambler in the download section of this tutorial.

Thank you for visiting my thread, and questions or comments are appreciated.

Artemis - August 24, 2012, 12:38 am

Thanks for the tutorial, I'll need the VPN on my phone for sure

K????s??w? - August 24, 2012, 1:11 am

Thanks for the tutorial, sadly I already have done all of the above! :D

Eternal. - August 24, 2012, 1:23 am

Thank you for your compliments, if you believe anything was left out please let me know and I will research it if I find it important. For now, at the top I have torrenting and using your phone anonymously as well.

Kind regards,

- ETERNAL

MagicMushroom™ - August 24, 2012, 1:37 am

Nice tutorial...the most wasn't new for me. But for other members it will be very usefull.

What free VPN can you recommend to me?

Hack-IT! - August 24, 2012, 2:10 am

Nice tutorial bro i think you should have used littile light colours!

Eternal. - August 24, 2012, 2:10 am

I do not recommend free VPNs as they cannot be trusted to not keep logs, however, Enigma VPN has a contest for a free licence you should check out.

Kind regards,

- ETERNAL

Eternal. - August 26, 2012, 11:45 am

Added: Use a proxy on skype so no one can resolve your ip address.

Kind regards,

- ETERNAL

YoYoZ - August 26, 2012, 12:22 pm

Thanks, helped me alot as I was getting stuff done to me lately.

Anvhunter - August 26, 2012, 1:38 pm

OP, nice tut mate, thanks for this. BTW I like you avatar <3

zetza - August 26, 2012, 1:57 pm

Enjoyed reading this, thanks for sharing your knowledge!!

Eternal. - August 26, 2012, 2:04 pm

No problem, glad you liked it.

Kind regards,

- ETERNAL

iGalaxy - August 26, 2012, 2:13 pm

Nice TuTorial mate, keep it up.

Regards.

c h a r a c t e r s

Just reported mate. Why do you think the 35 character's are here for?

Regards

Austerity - August 28, 2012, 12:43 am

Nice thread bro, helped me out heaps.

Eternal. - August 28, 2012, 12:45 am

Glad it helped you Mila, thanks for commenting.

Best regards,

Thanks.

Thank you sir, I appreciate your comments.

Breaking Bad - August 29, 2012, 11:43 pm

the dark blue doesnt really mix with the forum colors, Other than that. Great tutorial thanks!

RVZE - August 29, 2012, 11:49 pm

Really good tutorial man! Keep up the good work. HQ in my books :)

What free VPN can you recommend to me?

Check out my thread here. This is a free VPN Piratebay testing at the current moment. I have been using it for some time and seems legit.
