Thread: [Salmons guide to staying safe online with your browser!](#)

SuaveSalmon - August 24, 2012, 3:55 pm

First: Install Mozilla firefox (I recommend it because it has a virus detection built in, it will scan all files before download them, it takes around 3 seconds for them to scan it) at

<https://www.mozilla.org/en-US/products/download.html?product=firefox-14.0.1&os=win&lang=en-US>

HTTPS everywhere

A MUST HAVE FOR ALL COMPUTERS!!! Any browser!

<https://www.eff.org/files/https-everywhere-latest.xpi>

it is HTTPS everywhere. It encrypts your web wherever possible, making it A LOT harder for people to view what you are doing. It will make it so if someone is trying to intercept your traffic they will get,

fasdfd2f4d5f41d3sf54ad5s3f4

instead of,

John Doe 1337 lane

It adds a small friendly icon at the top of your browser bar

[IMG]<http://i1168.photobucket.com/albums/r493/SuaveSalmon/eff.png>[IMG]

Keyscrambler

not super necessary just nice

It is keyscrambler.

It prevents keyloggers (password stealers) from tracking your every move!

http://download.cnet.com/KeyScrambler-Personal/3001-2144_4-10571274.html?part=dl-KeyScramb&spi=2591bfcc17c10aa48f2f657250c97834

It gives the keylogger

1df54daf45d4f3adsf45sd

instead of,

Hackforums mega botnet

To get the annoying box to go away just have it off, or turn it to one second, need any help PM me here.

Ghostery

I would highly recommend this.

It stops and blocks third party trackers, adds, and cookies from getting data from you. They are practically bruteforcing the data out of your browser.

Ghostery

For any browser: <http://www.ghostery.com/download>

For Mozilla:

<https://addons.mozilla.org/firefox/downloads/latest/9609/addon-9609-latest.xpi?src=dp-btn-primary>

When you install it, go through the instruction guide, then a little icon will show up

[IMG]<http://i1168.photobucket.com/albums/r493/SuaveSalmon/ghostery.png>[IMG]

Adblock

This is great for an avid YouTube user or shopper. Tired of all those annoying ads or having to view

adds before a video? Well this takes them all off.

https://addons.mozilla.org/firefox/downloads/file/159659/adblock_plus-2.1.2-sm+an+fx+tb.xpi?src=external-abp.o-en-firefox

no questions asked, every single add off!

Nothing to set up. Just right out of the box.

[IMG]<http://i1168.photobucket.com/albums/r493/SuaveSalmon/adblock.png>[/IMG]

You can turn it off on some pages by clicking the icon on the bottom left of your browser and clicking disable. This will help with security, so you don't get any pop ups on fake sites, telling you to download this adware!

Web of trust

Are you one that wants to know if you are on a safe site? Can never decide? Try looking up the websites and looking at reviews online. Well if so then this is the add-on for you. It is called WOT, Web of Trust. It gives you reviews from thousands of people around the world rating the site. It will tell you if the site has any bad/fraud issues. Become one of them and start rating the web and help the WOT community. The add-on is simple and efficient. As you see in the picture below it is a little button next to your search bar. You can rate it by click any of those colors. I blacked out my tabs and site I was on for showing purposes. If you want this great WOT add-on download it here

https://addons.mozilla.org/firefox/downloads/file/159659/adblock_plus-2.1.2-sm+an+fx+tb.xpi?src=external-abp.o-en-firefox

[IMG]<http://i1168.photobucket.com/albums/r493/SuaveSalmon/wot-1.png>[/IMG]

Optional- Download status bar

Tired of the pop up you get every time you download something on Mozilla Firefox? If so get status bar. It downloads everything in the status bar in the left hand corner of your browser instead of the box

[IMG]<http://i1168.photobucket.com/albums/r493/SuaveSalmon/statusbar-1.png>[/IMG]

The picture above shows it. Get it here

<https://addons.mozilla.org/firefox/downloads/latest/26/addon-26-latest.xpi?src=external-denblog>

If you would like the theme I have on my firefox (makes it black) get it here

For windows and linux users:

https://addons.mozilla.org/firefox/downloads/file/157613/ft_deepdark-3.3.5-fx-windows.jar?src=cb-dl-users

For mac users: Sorry dont have one right now, 14.01 took it out, should be out soon though :D

Any questions contact me via PM here on HF

p.s. I did post this a while ago, but it was just a pile of crap. So I updated everything with direct links and all that :D

?Nano_Curie? - August 24, 2012, 5:44 pm

Thanks for this , a few things i didn't have a clue about

And am installing now ^_^ , not firefox though that browser is pooppy :P

Cubs - August 24, 2012, 6:34 pm

Thanks for this tut, this will be very useful for some users.

I will add most of this stuff as well.

phybe? - August 24, 2012, 8:43 pm

Nice recommendations. I would however bold and increase the font size of the names of the addons for the ease of reading.

Glassy - August 24, 2012, 9:34 pm

Pretty good compilation of the most useful tools when staying safe. I am sure this will come in handy for many. Good work.

FreshBoss - August 25, 2012, 6:04 am

Thank you for this great information/tut. i will be changing back to mozilla from chrome i suppose.

PhineasPhreak - August 25, 2012, 6:14 am

A good compilation of addons for browsing, Salmon. I agree with Glassy and suggest you change up the formatting of the OP a little for ease of the reader.

?D?vi??c?t?™ - August 25, 2012, 10:13 am

Any HTTPS program for Google Chrome available?

SuaveSalmon - August 30, 2012, 5:07 pm

Thanks for all the kind comments. A would help some more people see it :D

SuaveSalmon - September 17, 2012, 4:30 am

Thanks guy's. I think more of you should see this :D

Corso - September 17, 2012, 5:09 am

Here's a few more items you may look into yourself;

PrivacySuite

NoScript

Beautiful add ons for firefox :-)

Anyway, great tut - +Rep for all your hard work! Keep it up!

d3vill0ck - September 17, 2012, 5:46 am

I wouldn't say this is the right section for the thread, but a decent tutorial none the less :).
