(HOW TO PORTFORWARD DARKCOMET)

Noatice: I do realise their are many Tut's on how to PF out their, but this was a breif request.

STEP ONE

Goto Socket/Net and click Listen to port at type 200
the click Listen. you can download Darkcomet 5.3.1 [here](#)

STEP TWO

Make sure you register & download DUC 3.0 by the link underneath. [Click to download](#)

STEP THREE

Goto no-ip.com and then click Add Host In the box that says
HostName Put anything you like e.g, Darkcometsetup then next to it
Choose, no-ip.org, no-ip.biz or no-ip.info.

STEP FOUR

Open DUC and login with your details. Then, in the right hand bottom corner, you will see the no-ip icon. Open it and then click select hosts and tick the one you made then save. You can now close DUC.

STEP FIVE

Click start on your desktop.

Windows Vista/7:

Start & then search cmd. Then open cmd. type ipconfig and find your default gateway. it should start with 192.168.1.x (x means any number)

when you find it, type it in your adress bar in your browser. It should come up with a login box. It should be admin admin or admin password.

Windows XP

Goto start, accessories then CMD. then do the same as it says on the other one (windows vista/seven)

STEP SIX

Goto advanced then portfowrard & type in your private ip witch should also be be in cmd. it should be your IPv4 Adress. place it into the box that says private IP. then it could ask you for a name for the port. type RAT. then is should ask for port entrance and port leave. type 200.

STEP SEVEN

Once done, goto [canyousee me < CLICK](#) and type 200 in the box. It should then say Success.
If not contact me via PM.

Please don't leave bad comments as i spend a bit on this. Thank you!

-Josh

Wow thanks for making this specifically for me, I really appreciate that. I would vouch or whatever if I was qualified to, you're awesome J0sh :D

Vile Soul - August 27, 2012, 8:03 pm

nice tut but you should consider getting it moved to the tutorials section or someone will remove it.

J0sh - August 27, 2012, 8:06 pm

Thankyou. I will do that now. i dont want it to get removed..

DoctorMax - August 28, 2012, 4:33 am

Thanks for making it for me aswell <_>.

Thanks again Josh =D.

Antigen - August 28, 2012, 5:40 am

Good one for RAT Newbies,It's a difficult topic for newbies to master RAT(difficult part is PF),I learned some too.Thanks dude.

Dreamer - August 28, 2012, 6:01 am

Although a lot of people have made this tutorial, it's really good for the newbies that have not seen it yet. Especially those trying out their first RAT :)

Lipzo - August 28, 2012, 6:10 am

nice tut, will help quite a few people :)

Risky56 - August 28, 2012, 6:50 am

There are like a million of these tutorials already.. Please search next time. :)

Danial Larry - September 30, 2012, 12:28 pm

Thanks J0sh. Really helped me out here! Searched and most clear thread!

Thuqnificent - October 10, 2013, 4:42 pm

I've watched and read so many tuts but everytime I check on canyouseeme it says it cannot see my service and the reason: Connection timed out

Nico626 - October 29, 2013, 1:23 pm

same here, ive tried so many times and it says conn timed

permanantxz - April 10, 2014, 6:56 pm

Thank you so much, I could finally portforward

ZigBag - August 14, 2014, 2:21 am

Hey at the last step mine says : "Error: I could not see your service on 115.64.114.221 on port (200)" , when i did portforward and everything. Everthing you said i did. Please help me :D , thanks

jackharper - November 14, 2014, 7:49 pm

I am having problems... I did every thing right .. canyouseeme.Org also says port is forwarded correctly but when I sandbox the rat server nothing opens.. it doesn't even show that startup message which we set up while making a server...plz help

TTRS23 - November 15, 2014, 3:12 am

Nice tut ! just started to work with darkcomet , sure this will help me with my experiment

__Shadow__ - December 16, 2014, 11:48 pm

It says on canyouseeme that my PC is not found on the port 200! What do I do?? Cant PM BTW im new!?

skelly76 - December 16, 2014, 11:58 pm

Glad to see all these new users being helped out. This is general info someone can google but still keep it up OP.

Pando - July 16, 2016, 5:19 pm

J0sh your PM info is missing and im having a problem canyouseeme is saying "error" please help me when you can

h4x0r06 - December 27, 2016, 9:42 am

nice tutorial my friend ;)
