Thread: [\[Question\] Cracking 'n Keygens](#)

Prayanthem - November 8, 2014, 10:59 am

Hey,

I was wondering if there was any tutorials on Hackforums on how to crack programs and make keygens. I want to be able to crack programs that I download in trial mode for example (if that is possible).

If nothing like this has been made (the tutorials) is there any1 here with knowledge of the subject that might do so. Or could refer me to some posts/articles/reading material that could help me acquire that knowledge.

My research on the subject is heavily limited. Mostly because I am a noob and thus cannot tell the legit posts from the troll posts. In other words I do not know if my readings so far have actually helped at all.

Not sure what abilities are required, but I know some code and I've had calculus and discrete mathematics. To locate the algorithms for keygens I'm guessing some kind of reverse engineer and deobfuscation tools might be required.

I was not sure what category I was supposed to put this in. Maybe not even hacking but computing. Sorry if I caused any inconvenience

There is a whole section dedicated to just this thing mate >>>[Decompiling, Reverse Engineering, Disassembly, and Debugging](#)
