Thread: [\[HF Userscript \] PM From Post \[V 1.0.2 \]](#)

DeNy - August 28, 2012, 8:51 pm

This script allows the user to easily send PMs from threads.

How to install:I recommend Firefox with the Greasemonkey extension or Google Chrome with the (REQUIRED) Tampermonkey extension (REQUIRED).

Firefox: <http://userscripts.org/about/installing>

Opera: <http://www.howtogeek.com/howto/3986/set-up-user-scripts-in-opera-browser/>

Internet Explorer:

<http://www.ghacks.net/2008/11/16/install-greasemonkey-scripts-in-internet-explorer/>

Google Chrome / Chromium: Install [TamperMonkey](#) from the Chrome Web Store. Then follow the instructions for installing under FireFox.

Script:<https://userscripts.org/scripts/show/142431>

Images:[img=710x383]http://img.ctrlv.in/503d6a62b1037.jpg[/img]

Changelog:1.0.0 - Script Created

1.0.1 - Now works with FireFox

1.0.2 - Fixed a small error I made where it would link to the poster's profile instead of the post.

If something isn't working, please let me know in this thread. :)

Also, don't forget to check out my other popular scripts!

Pick - August 28, 2012, 8:54 pm

I dont get how to add a script, I downloaded tempermonkey, now what?

lump021 - August 28, 2012, 8:54 pm

(Aug 28, 2012 08:54 PM)Pick Wrote: [\[CITE\]](#) I dont get how to add a script, I downloaded tempermonkey, now what?

Click on the link to the script, in the top right corner you see "install". Make sure you install it for tempermonkey though.

@OP

Great script, I'm using it. :)

(Aug 28, 2012 08:54 PM)Pick Wrote: [\[CITE\]](#) I dont get how to add a script, I downloaded tempermonkey, now what?

Which browser are you using?

I'm guessing since you downloaded tempermonkey, you're using chrome.

Just go to the script page, click install, then install it under tempermonkey.

-Eminent - August 28, 2012, 9:05 pm

Spafic, you should make a script to where you can choose different designs for hackforums.

Maghbool - August 28, 2012, 9:07 pm

Seems cool but it'll be a mess and I don't need this. Also won't signatures be blocked? But still thanks for the contribution.

Eternal. - August 28, 2012, 9:07 pm

Very nice, thank you for another wonderful userscript. Anything new on the post preset script I asked about?

Best regards,

[-ETERNAL](#)

4/20 - August 28, 2012, 9:08 pm

Looks good, going to install it on opera and google chrome when I feel like getting off my iPad.

ultimateowner - August 28, 2012, 9:08 pm

Wow, this is really useful. Thanks.

Tyler? - August 28, 2012, 9:10 pm

Cool script. But in all honesty...it's not that hard to click the PM button.

_DeNy - August 28, 2012, 9:21 pm

(Aug 28, 2012 09:10 PM)Tyler? Wrote: [\[CITE\]](#) Cool script. But in all honesty...it's not that hard to click the PM button.

Nope, but who wants to open a new tab. I'm lazy.

(Aug 28, 2012 09:07 PM)Killspawn Wrote: [\[CITE\]](#) Seems cool but it'll be a mess and I don't need this. Also won't signatures be blocked? But still thanks for the contribution.

The window is toggleable. You can open it or close it. HF looks exactly the same until you click the "Open PM Box" button.

Best regards,

[-ETERNAL](#)

I'll work on it eventually. I wanna get some other stuff out first.

Doxed. - August 28, 2012, 9:23 pm

Very nice, scripts you have made here sir. !

Eternal. - August 28, 2012, 9:26 pm

Very awesome, thanks again for making so many wonderful scripts.

Best regards,

[-ETERNAL](#)

Efficient - August 28, 2012, 9:52 pm

This look pretty nice I might install it.

Nate - August 28, 2012, 10:19 pm

Its a nice script, it kinda saves seconds of your time that adds up to minutes :3

Thanks for sharing your script :3

_DeNy - October 9, 2012, 8:42 am

Thank you all for the positive feedback.

Make sure to report any bugs in this thread.

?asp3r - November 19, 2012, 1:29 pm

There is a bug, if you try to PM somebody with a full PM box, it looks like it went through when it really didn't. Happened to me a few times today.

?Cooldude? - November 19, 2012, 1:33 pm

You don't even need Tampermonkey, do you?

You just drop the .js file in the extensions page of chrome.

kray - November 19, 2012, 1:33 pm

This is a cool script, thanks for making it

_DeNy - November 19, 2012, 1:38 pm

(Nov 19, 2012 02:33 PM)?Cooldude? Wrote: [\[CITE\]](#) You don't even need Tampermonkey, do you?

You just drop the .js file in the extensions page of chrome.

You might not depending on the functions the script uses.

I usually suggest using tamper money with my scripts. I sometimes use functions specific to that plugin.

You also will not get some of the functionality (IE: jQuery, Ajax requests, egc)

Really it's more for the developers than the users.

Not much I can do about that.

Sorry.

?asp3r - November 19, 2012, 1:41 pm

Sorry.

Cant you have it check if the thread title appeared in your sent box?
and if it didn't, warn you?

_DeNy - November 19, 2012, 1:48 pm

(Nov 19, 2012 02:41 PM)14942744 Wrote: [\[CITE\]](#) Cant you have it check if the thread title appeared in your sent box?

Would have to make a query to your sent box, and (for people like me) its not at the default location. Just makes it harder.

I'll think of something.

Ahh, I see. Thanks for the clarification. :Smile:

Reminiscent - November 19, 2012, 3:17 pm

This will help me out alot. Thanks so much. Appreciated.

Kenny West - November 19, 2012, 4:00 pm

For some reason, it won't work for me. I'm using SRWare Iron (OS Google Chrome) on Mac and when I click "Open PM Box", nothing happens.

_DeNy - November 19, 2012, 4:40 pm

(Nov 19, 2012 05:00 PM)8===D~ Wrote: [\[CITE\]](#) For some reason, it won't work for me. I'm using SRWare Iron (OS Google Chrome) on Mac and when I click "Open PM Box", nothing happens.

Well, for one... SRWare Iron isn't a browser I support...

Maxorg - November 19, 2012, 4:58 pm

I like the idea but I will feel uncomfortable a bit with this script :/

KegzHD - November 19, 2012, 5:18 pm

I think it's.. I don't like it. Makes each post too long. Too much scrolling.

_DeNy - November 19, 2012, 6:23 pm

(Nov 19, 2012 06:18 PM)KegzHD Wrote: [\[CITE\]](#) I think it's.. I don't like it. Makes each post too long. Too much scrolling.

It doesn't modify the post length at all. Overlays the post.

I guess you didn't bother using it, right? Just looked at the picture.

(Nov 19, 2012 05:58 PM)CyborgIzSoBeast Wrote: [\[CITE\]](#) I like the idea but I will feel uncomfortable a bit with this script :/

And why is that if you don't mind me asking?

Never heard anyone say that.
