Doesn't work for all countries. I have tried this before.

Anyways, that's surely a good step by step tutorial.

I am just going to ban you from caps. ?

On a more serious note. What was the purpose of using uTorrent in this?

:P that font support only caps and i love that font

and yup answer for your question

utorrent is giving the port number which is already active...so we are just taking port number from utorrent and using it for RAT server.
