Is it possible that your sound was disabled in BIOS?

maybe i don't know how can i found out?

archangel.dmitry - August 30, 2012, 3:16 pm

You need to reboot your computer then when it restarts press Del or a key you need to get into BIOS. Then you need to go to Onboard devices and check if the sound card is enabled.

It depends, make sure speakers are plugged in properly.

If laptop/ or proper speaker setup.

Get the proper driver's for your sound.

You said reinstalled Windows 7?

Yep all your drivers need to be reinstalled ?

Website_Hitincreaser - August 31, 2012, 7:18 am

Reinstall drivers and that will fix your problem :) Has long has the speakers are turned on and plugged in correctly.
