Vouch. Seen his giveaway shells, along with many satisfied people whom have purchased his private shells. Definitely worth buying; deemed as a trusted shell seller by me, personally.

A. The output of the shells is ALWAYS incorrect, no matter what you say. If you really wanna put them into a test then test them over a VPS (dstat), I got one and I'll be happy to test some for you :) , It's the only real way to check how hard it is.

B. Are those Webdavs?

Thanks.
