Thread: [\[Help\] Is this Rootable? 2.6.18-194 - 2010](#)

OMARATION - August 30, 2012, 9:50 am

Hello guys, so recently, i got a shell uploaded, no big deal.

and this is the the kernel

Linux xxxxx.xxxx.com 2.6.18-194.17.1.el5 #1 SMP Wed Sep 29 12:50:31 EDT 2010 x86_64

My question was, is it rootable?

My skype is in my signature, so if you know add me with your HF name please.

-Regards ?

Bacardi - August 30, 2012, 10:42 am

You could try this one: <http://localroot.th3-Outl4ws.com/xploits/2.6.18-164.zip>

HaxOr showed me that, that exploit can be used for other version then just 2.6.18.

Thanks for the help, i'll try it, but the problem is the portforwarding. ;(

I'll try and do it thou, :)

rvltr - August 30, 2012, 10:52 am

might try this one. not sure if it will work or not

<http://www.1337day.com/exploits/15065>

didnt work on the few i have with the same kernel but you may have better luck

Well if that's the case I suggest using webacoo.

<https://github.com/anestisb/WeBaCoo>

You can connect to the server without port forwarding needed.

Could you add me on skype please? its in my signature <3

Thanks!

I would recommend to use weeveily stealth and simple to use

Also are u sure ur router doesnt support port forwarding.

If nt ill help regarding the port forwarding it is easy if it supports

The Decoder - *August 30, 2012, 10:55 pm*

Try backdoor host to connect server..it can help
