VOUCHES:

Spoiler ([Click to View](#))

(Jun 5, 2012 10:58 PM)Inspector Gadget Wrote: [\[CITE\]](#) first impression was brilliant!

opened the folder 2 files hwid scanner and the crypter itself, so simple!
login was activated in a couple of minutes

First few minutes i was having issues with the updater but after i gave up seeing if there was an update i got it opened up and got to work.

The layout is awesome! simple and explained really well anyone could use it.

I had a little issue with the icon selection so maybe add a couple of .ico files into the pack as i had to find one from google to use.

Clicked crypt and within 3 seconds it was on my desktop crypted and fully working, although it did keep opening "my computer" when i run the crypted rat.

This crypter is worth every penny!

Ease of use 9/10

gui quality 10/10

looks 9/10

speed 10/10

functions 5/10

bug to age ration 8/10 very low ammount of bugs for such a new crypter.

Review: Before buying, I was a tad skeptical and decided to contact him via skype, as soon as I added him, within 5 minutes he accepted me and the deal was underway. He advised me to use the AutoBuy feature, and I did so. Once the process was completed my crypter was working out of the box. Activated. I asked him questions, and he answered all of them. I scanned the EXE and ClamAV found it out of 32 other anti's however within 10 minutes the owner of this crypter pushed out a new update. Love this, HIGHLY recommended.

NoodleBot™ - August 30, 2012, 7:38 pm

Vouch for this crypter, and the entire support team.

Amazing crypter, has it's time to shine every update.

Contact me for any help regarding RazorCrypt.

Sorry, Razor, but I believe these issues need to be addressed as I am getting complaints about it.

I tested it myself and have reproduced the problem.

I get this upon running my crypted server (Startup on) + (Injection notepad)

Upon checking that server in task manager, (Ignore the other ones, were tests, but they mostly produced the same result at the moment.) I find the upd.exe file that was mentioned in the above photo, as well as it being added to startup as upd.exe

Now, the weird part is that even WITH that first photo's message, my server runs perfectly on my CyberGate. (I have not tested with DarkComet, or BlackShades NET yet) The only concern is that the filenames and startup names are getting predetermined, as well as the error message that pops up upon execution. CyberGate's connection is severed normally by ending process Upd.exe . Please look into this for the other customers.

This file is produced when crypting, and remains in my RazorCrypt folder.

BlackShades NET has also been reported to be corrupting upon crypting, and I am going to test this right now.

Edit: BlackShades NET test:

Filename that I selected, + upd.exe were both added to startup.

BlackShades NET server did not execute properly, and the connection was severed.

Was produced again, while crypting BlackShades. (Not sure if this is a BS related crypting file or what)

Please take a look at these Razor, and message me for any concluding tests.

I tested it myself and have reproduced the problem. I get this upon running my crypted server (Startup on) + (Injection notepad) Upon checking that server in task manager, (Ignore the other ones, were tests, but they mostly produced the same result at the moment.) I find the upd.exe file that was mentioned in the above photo, as well as it being added to startup as upd.exe Now, the weird part is that even WITH that first photo's message, my server runs perfectly on my CyberGate. (I have not tested with DarkComet, or BlackShades NET yet) The only concern is that the filenames and startup names are getting predetermined, as well as the error message that pops up upon execution. CyberGate's connection is severed normally by ending process Upd.exe . Please look into this for the other customers. This file is produced when crypting, and remains in my RazorCrypt folder. BlackShades NET has also been reported to be corrupting upon crypting, and I am going to test this right now. Edit: BlackShades NET test: Filename that I selected, + upd.exe were both added to startup. BlackShades NET server did not execute properly, and the connection was severed. Was produced again, while crypting BlackShades. (Not sure if this is a BS related crypting file or what) Please take a look at these Razor, and message me for any concluding tests. [/align]
