Thread: [The best spyware/malware/virus removal tool](#)

HexTheRex - August 31, 2012, 9:25 am

Ok, my pc might be full of shit because I've downloaded so much stuff from unknown websites and tried everything... My anti virus is working and detecting threats very fast and removing them and when I scan, it doesn't detect anything special in my pc. It's still possible that something is hidden... So, if you know any, please tell me a software that is best for this job.

You should take this to <https://hackforums.net/forumdisplay.php?fid=115> this section.

They're great with helping you remove malware.

:)

Anti-root kit's such as tdsskiller, hitman pro and GMER detect hidden software. However you shouldn't really use these tools unless you know what you're doing. For further assistance you can go here: <https://hackforums.net/showthread.php?tid=2759805>

And here is another useful thread: <https://hackforums.net/showthread.php?tid=82550>

Hope this helps
