Thread: [1K Build, Do you Like it And What Should I Replace](#)

MissingN?. - August 31, 2012, 9:12 pm

<http://secure.newegg.com/WishList/PublicWishDetail.aspx?WishListNumber=27997428>

I want a monitor too but 1K is my budget now :(

Can you guys help me lower my build price but not to the extent that I replace everything, thanks.

EDIT:Thanks XML I never knew how to make it public lol, and I forgot to edit the link after /facepalm.

Assume - August 31, 2012, 9:16 pm

Make the wishlist public. Go to your saved wishlist and copy the ID="copy numbers in here" then to go to public wishlists. Open a public one then paste your ID over the id listed on the URL. Post that URL here.

asaggynoodle - August 31, 2012, 9:19 pm

Same, can view list either. :L Must.. View.. List... All.. Costs... Must.. Give Opinion.... "Ugghh" Falls over on desk

'Chief. - August 31, 2012, 9:19 pm

make the wishlist public, we cant see it.

Made the wishlist public for you

<http://secure.newegg.com/WishList/PublicWishDetail.aspx?WishListNumber=27997428>

MissingN?. - August 31, 2012, 9:22 pm

Just updated it, sorry guys, first time doing it :/

(Aug 31, 2012 09:22 PM)Bengali Wrote: [\[CITE\]](#) Made the wishlist public for you

<http://secure.newegg.com/WishList/PublicWishDetail.aspx?WishListNumber=27997428>! got it, sorry I wasted your time :(

asaggynoodle - August 31, 2012, 9:33 pm

Don't worry, all good. Anyways.. Build looks perfect. Other than get better Ram.

<http://www.newegg.com/Product/Product.aspx?Item=N82E16820226221>

That ram is super high performance, If you ever find 1600Mhz ram with lower than a 9 Cas latency you know you can overclock it like crazy shit fast. Especially since it has a latency of 7, Meaning you can up it to 9 and get about 1866-2133Mhz out of it with 1.65v.

AKA This might look kinda goofy being yellow but its some fast shit, and great for overclocking.

Other than the Ram, As Bengali will soon tell you the 7870 is "DA bomb." That guy can overclock it

like a banshee.. Especially with the nice dual fan + Extra thick radiator.

'Chief. - August 31, 2012, 9:34 pm

dont get kingston hyper x, get these

<http://www.newegg.com/Product/Product.aspx?Item=N82E16820231428>

hyper x over heats really bad, i had a pair also i would go with an nzxt phantom 410

<http://www.newegg.com/Product/Product.aspx?Item=N82E16811146085>

but the case is 100% irralevent the 410 jst looks kewl

I new the HyperX Sucked!

EDIT: Saw the reviews this thing is beast from what they said! Totally adding this, thank you o kind sir.

The only reasons I wouldn't recommend that Ram is that it has a 9-9-9-24 @ 1600Mhz, meaning to get anything higher you need to hit A Cas of 10 which will most usually auto set to 11-9-10-26, AKA you dont want that. The higher the Cas latency the longer the ram cycles to make contact with the CPU's memory controller.

Bengali - August 31, 2012, 9:43 pm

Don't like the build. Can do better for the budget.

asaggynoodle - August 31, 2012, 9:44 pm

Your very welcome, after looking a bit, it does look pretty cool. To bad you would never see the "Radioactive" Symbol! Anything else i can assist you with today Sir?

Dialga - August 31, 2012, 9:45 pm

Change the RAM. Get Corsair Vengeance or RipJaws...

MissingN?. - August 31, 2012, 9:46 pm

ProxyRoxy - August 31, 2012, 9:48 pm

I would get a better case:

bitfenix shinobi

asaggynoodle - August 31, 2012, 9:48 pm

You sir are correct, you deserve a fine cookie.

Im just saying, but These guys have no idea about ram.. Their just going by name brand stuff. But feel free about going about research you will find that the Mushkin is much higher Quality.

Here's the monitor i found :) Looks sweet as hell, but i has a much better contrast ratio over the others of the same price range. +it has 3d!!!! :)

<http://www.newegg.com/Product/Product.aspx?Item=N82E16824009222>

I have the same one in my office (Non gaming). And its Awesome. Super reliable, and nice resolution. The brightness settings are really nice too because they don't give that faded affect when on higher levels.

Bengali - August 31, 2012, 9:55 pm

Change the motherboard to an Extreme4

<http://www.newegg.com/Product/Product.aspx?Item=N82E16813157293>

Get cheaper RAM

<http://www.newegg.com/Product/Product.aspx?Item=N82E16820231428>

Get this SSD

<http://www.newegg.com/Product/Product.aspx?Item=N82E16820147133>

Up your graphics card to a 7950 if your budget allows

<http://www.newegg.com/Product/Product.aspx?Item=N82E16814202003>

(Aug 31, 2012 09:51 PM)asaggynoodle Wrote: [\[CITE\]](#) Im just saying, but These guys have no idea about ram.. Their just going by name brand stuff. But feel free about going about research you will find that the Mushkin is much higher Quality.

And yes, Mushkin is a top notch memory brand.

I agree to everything but you should get the Intel 330 SSD. they're not expensive and have 3 years warranty and its stable

MissingN?. - August 31, 2012, 10:02 pm

I in general don't know what to pick for SSDs because all of them get great reviews and mine is 64\$ and I only am using for dual booting Linux and Windows 7, I'll sick with my SSD, I will change everything else but the memory, me like teh ram.

ProxyRoxy - August 31, 2012, 10:03 pm

<http://www.youtube.com/watch?v=cdzmylEz8hU>

this will give u more space on ssd

Bengali - August 31, 2012, 10:51 pm

Didn't notice that was a 64GB SSD...

Anyways, since Samsung controls everything from the NANDs to the firmware, the 830 series makes for an excellent drive.

But yes, either Intel or Samsung will serve you just fine. Look into HyperX and Plextor SSDs.
