SellingSteam - September 1, 2012, 6:09 am

Spoiler ([Click to View](#))

Remote CMD :

Spoiler ([Click to View](#))

Images is in spoiler.

Any suggestions ?

madman2 - September 1, 2012, 9:54 am

Remote Task Manager.

Remote RegEdit

Pumpkins - September 1, 2012, 10:02 am

and you made this yourself?

will you be selling it?

SellingSteam - September 1, 2012, 11:25 am

(Sep 1, 2012 10:02 AM)Zakary Wrote: ([CITE](#)) and you made this yourself?

will you be selling it?

Of course i did :3.

Everything is coded from scratch.

I will be selling it within a week - two , currently coding a couple of things (will be unique).

P.S : currently it is over 2k lines of code.

?

javaPro - September 1, 2012, 11:29 am

2k lines of code?? Someone doesnt know about OO programming...

SellingSteam - September 1, 2012, 11:33 am

(Sep 1, 2012 11:29 AM)javaPro Wrote: [\[CITE\]](#) 2k lines of code?? Someone doesnt know about OO programming...

That's nothing .

?

Spoiler ([Click to View](#))

Any more suggestions?

javaPro - September 1, 2012, 11:37 am

Obviously, you are clueless and no nothing about java. You would never ever program a compelte rat in one class. If you did, well... Tell me how you programmed your screen capture, lets see how much of this is your code.

SellingSteam - September 1, 2012, 11:42 am

(Sep 1, 2012 11:37 AM)javaPro Wrote: [\[CITE\]](#) Obviously, you are clueless and no nothing about java. You would never ever program a compelte rat in one class. If you did, well... Tell me how you programmed your screen capture, lets see how much of this is your code.

LMFAO i did coded my own screen capture. (I never said it is in the same class)

if you are such a "java" pro why dont you know how to code a simple screen capture?

Why do you ask me ? Rofl.

*Hint for you

Code `ImageIO.write(robot.createScreenCapture(screen), "type of an image",
BufferedOutputStream);`

?

now stop commenting here.

Stryker™ - September 1, 2012, 11:54 am

OP is right... it can be over 2k lines easily lol xD and that is expected for a rat :P none makes a 100 lines of code rat unless they are like the god of OOP and even then it would not work xD

javaPro - September 1, 2012, 12:00 pm

Stop being such a jackass, before I make you look really stupid. I didnt say I couldnt code a screen capture, I was asking you if you knew. Anyways, good luck with that code, lol. Shows how good you are at java implementing it that way. That method has issues grabbing one image, let alone constant streaming. Let me know if you want a complex answer as to why, it will blow your mind!!! Alternatively, you can do a simple search on performance issues with createScreenCapture. And dont say the performance of this is down to the programmer because its not, its the way the Robot class implements this method and stores the data. Get back to Hello World and stop pretending you know java.

Anyways, look at your rep, you think anyone would trust you?

And to JavaTm, I was not talking about the rat not being over 2k lines off code. I have made programs over 100k lines. It was the fact that he has obviously done 2k lines of code in one class which is poor programming.

SellingSteam - September 1, 2012, 12:05 pm

Get back to Hello World and stop pretending you know java.

Anyways, look at your rep, you think anyone would trust you?Lmfao that is so funny because the live streaming part is great.

[img]http://troll.me/images/you-a-rahtard/bro-ur-a-dumb-ass.jpg[/img]

Now fuck off this thread.

javaPro - September 1, 2012, 12:06 pm

Really cant be bothered with clueless people like you. Good luck with the rat and the many sales I am sure you will make.

SellingSteam - September 1, 2012, 12:10 pm

(Sep 1, 2012 12:06 PM)javaPro Wrote: [\[CITE\]](#) Really cant be bothered with clueless people like you. Good luck with the rat and the many sales I am sure you will make.
so why do you even bother posting?

Enough said.

?

javaPro - September 1, 2012, 12:12 pm

Just wanted to let other people know how clueless you are, but I suppose they will be clever enough to look at the comments for your rep. Its skids like you that give java a bad name.

SellingSteam - September 1, 2012, 12:12 pm

Who gives a fuck about rep anymore ?

A mod can close this for now.

redpois0n - September 1, 2012, 11:20 pm

Why you so jelly ?

Tbh , Anyone can just crack your application and bust your sales.
(Anyone can ddos your website and bust your sales)

Picklez - September 2, 2012, 7:24 am

To be honest, its perfectly easy to make a rat in ~100 lines. Say you have 100 classes, each class all in one line? Simples

Jire - September 2, 2012, 7:26 am

(Sep 2, 2012 07:24 AM)Picklez Wrote: [\[CITE\]](#) To be honest, its perfectly easy to make a rat in ~100 lines. Say you have 100 classes, each class all in one line? SimplesWhat?

I think it's possible to make a RAT in ~100 lines. I've done that with jFork...

I cannot see writing over 1000 lines for a program like this...

EDIT: jFork-free is 92 lines without imports and blank lines. It is 134 with imports & blank lines included. The paid jFork is 245 lines without import/blank lines and 318 including.

I do agree that my version is not the cleanest - But most of my code is the code of the gui that i built in neatbeans.

Btw the only special option in jFork is the Keylogger. (Although it is 40 lines or even less)
Mc stealer is public and all the other things are really easy to code.

*Btw whom no need to lie.

That's not 90 lines.

Jire - September 2, 2012, 7:41 am

That's not 90 lines.It's 92 without white spaces. You have decompiled it, producing very ugly code with C-style clause form. MCStealer is my API. Also, you decompiled the paid version... which I stated to having 245 without line/white space, and over 300 (more lines than your decompiled) including.

SellingSteam - September 2, 2012, 7:42 am

I did not decompiled the paid version.

(Sep 2, 2012 11:27 AM)SellingSteam Wrote: [\[CITE\]](#) Well they can try but i will make it client sided.

?

So your going to make server building and bot receiving server-sided?

?

null_username - September 4, 2012, 1:46 pm

(Sep 2, 2012 11:27 AM)SellingSteam Wrote: [\[CITE\]](#) Well they can try but i will make it client sided.

?

Think of it like this, buy a VPS, write a server - client software that will send information about the user using the RAT Client to your VPS server such as IP, log activity, check HWIDs, gather ping, sorta like the client is really your RAT.

That way when you do something like login, you have the server get the information and check it on its end, otherwise it will be pretty easy to crack.

Also I suggest the server sending an MD5 hash or write your own encryption method and de-crypt client side for checking.

javaPro - September 4, 2012, 2:00 pm

No point doing an encryption method or anything like this, still extremely easy to decompile. The only real way to protect a java app is to offer it as a SAAS. Unless your a java guru, its really your only choice if you care about security. And believe me, this person is not a guru, I would be surprised if he knew how to even write a Hello World app.

john3 - September 4, 2012, 2:05 pm

well done man, this looks very nice, i will i too could build something like this:)

frodo - September 4, 2012, 8:27 pm

what library was used to create the GUI? it looks pretty nice.

ChineseFountain - September 4, 2012, 9:11 pm

Lol yeah, good idea, lets decrypt a MD5 hash.

(Sep 4, 2012 08:27 PM)frodo Wrote: [\[CITE\]](#) what library was used to create the GUI? it looks pretty nice.

Looks like a custom look and feel (thats what Java calls their "themes", similar to those C# and VB.net templates you see around). You can find them all over the internet. It's usually just a jar library added to the classpath.

soul_ninja - September 4, 2012, 11:12 pm

(Sep 4, 2012 08:27 PM)frodo Wrote: [\[CITE\]](#) what library was used to create the GUI? it looks pretty nice.you can download skins here including that one

Uh didn't know that .

Kewl.

?

xColey - September 6, 2012, 5:34 pm

This looks great, Nice job dude. Hope you sell this

Great Prosperity - September 7, 2012, 2:15 pm

To all the haters please stop. Does it really matter how many lines of code the Rat has? This looks like a nice rat with a lot of features. I look forward to using it.

Do you have the ability to control mouse and keyboard during live screen capture with the rat?

Can you transfer files from their PC to your own computer? (ie file manager)?

Can you see the person's webcam?

If not, then you should totally implement these features if possible :D

DarkShadowz - September 7, 2012, 6:38 pm

(Sep 7, 2012 02:15 PM)Spikekey Wrote: [\[CITE\]](#) To all the haters please stop. Does it really matter how many lines of code the Rat has? This looks like a nice rat with a lot of features. I look forward to using it.

Here's how it will most probably be.

1. Yes.
2. Yes.
3. No. Definitely not gonna be in.

Anyways, there's a reason for all the hating considering on how OP even describes of how he condones such features in his RAT. He describes of his screen capture being great (erhem LOCALHOST connection) with having no performance issues at all by blatantly creating simultaneous screen capture shots and sending them over some UDP/TCP stream while you could have the bot cache the last screen capture, compare pixels, and send over the pixels and add them to the display! Well, that's just one feature. Who knows how the other ones are like.

SellingSteam - September 7, 2012, 9:02 pm
