Thread: [\[Question\] Kaspersky Trial Resetter 2010](#)

frenky - September 2, 2012, 1:41 pm

I have Kaspersky 2010 Internet Security and when I am trying to reset my Trial Period, it says I haven't turned off "Self Defence", but I did because I am doing it for year and half already, so I know how it is being done. But, somehow that error shows up even I have turned off "Self Defence". Any suggestions?

Thanks!?

I am using KIS 2011 for more than a year and I have not faced the same problem. What program are you using? If this one: sha1: 30057c99d8b56b88a93c1faa4edb0b88d2d71b12

*KasperskyTrialReset.exe then I can tell nothing to you, but to try reinstalling KIS. If not, then you can try another resetting program.

I have tried to reinstall it multiple times and few more resetters, nothing worked out, so I have bought the original 365 days license?

Welcome to original Kaspersky subscribers! ? I've had original license about 4 months ago, after all, it is not too pricey.
