Thread: [Beginners Guide On how to remove a rat from your pc. \[Spoon Fed\]](#)

NoBallsWontDolt - September 3, 2012, 1:51 pm

So today i feel like releasing something that many of you probably already know but i just thought for the people that dont know how i will show you. And that it would be a good idea for my 50th post to contribute to the community.

Step #1. Your going to want to open up start then type in "Msconfig" with no parenthesis in there.
[\[IMG\]http://img42.imageshack.us/img42/4200/msconfigbq.png\[/IMG\]](#)

Uploaded with [ImageShack.us](#)

Step #2 once you open Msconfig you are going to want to click on the start up tab, Which shows you what programs start up when you turn on your computer.

You are going to want to uncheck the ones with unknown manufactures like i did then click apply. As shown in the picture below

[\[IMG\]http://img708.imageshack.us/img708/5804/programsonstartup.png\[/IMG\]](#)

Uploaded with [ImageShack.us](#)

Now you can completely delete the Virus/Rat by going into the specified loaction it shows in the start-up tab in msconfig so it would look something like C:/program files/users/(yourname)/appdata/roaming or something around those lines. If you have any questions comment or pm me i would be glad to help

hobovision - September 3, 2012, 1:55 pm

Nice quick simple fast guide, thanks mate

NoBallsWontDolt - September 3, 2012, 1:58 pm

Your welcome. ^ at 100 post count i will be releasing a guide on a free proxy that works amazingzly and it didnt come off hack forums.

BlissEsso - September 5, 2012, 8:18 am

Thanks for this haha i didt actualy know how to, do this all i new was how to setup them up haha. Thanks mate!

mortalus - September 5, 2012, 9:33 am

Great tut's, I'll just add that if the server is crypted, and the crypter allow an assembly clone or assembly changer, you must see if the path is correct in msconfig

vpham118 - September 5, 2012, 9:41 am

Nice tutorial, as mentioned above knowing how to set this thing up and then knowing how to remove it is a completely different task.

panda911 - September 5, 2012, 9:47 am

Nice tut But in some cases the rat or the crypter will disable ms config

NoBallsWontDolt - September 5, 2012, 8:37 pm

Yes that is true but most people aren't to smart unless the l33ts of course :p and thanks everyone.

Hush - September 5, 2012, 10:26 pm

nice simple guide, easy to understand.

NoBallsWontDolt - September 6, 2012, 7:10 pm

Thank you, I will be releasing a proxy guide soon so stay tuned

Obi-Wan Cannabis - September 6, 2012, 7:30 pm

This is so basic, I wonder how people didn't know this... Thanks for the tutorial tho.

NoBallsWontDolt - September 6, 2012, 8:49 pm

Yeah your welcome just in case any newbies needed some help

Parkwaaay - September 6, 2012, 11:39 pm

Great guide mate, very helpful especially for people that play online games.

NoBallsWontDolt - September 7, 2012, 10:16 pm

Your welcome :) Glad i could help

Proxy guide coming out at 20 comments on this thread.

iSevere - September 8, 2012, 3:14 am

Some rats are not shown there dude so you cant delete them .

malw0rm - September 8, 2012, 3:40 am

Also we can use DarkCometRATRemover if you are infected with Darkcomet server.

Btw nice guide bro.

Crazy Ralph - September 8, 2012, 3:49 am

thanx alot for this man. I just checked my computer and it was full of 'unknowns' in the startup. now, they be gone! :)

TheNeutron - September 8, 2012, 11:03 am

Most likely won't work if that is a RAT... Never has, if that is RAT. Even if you find anything malicious & disable it, RAT will not bet busted. But works good with Keyloggers.

NoBallsWontDolt - September 8, 2012, 10:05 pm

Sorry, but if the person that is running the rat and he clicked start on start up it will show up in your "Msconfig" it tells you all of the items that start up when your computer is booted. Such as Itunes, Skype etc but another thing is that if the person made it so it disables your "Msconfig" then you should just run a virus scan with a good AV (Malware Bytes Pro, Trinity rescue) or just run the DarkComet rat remover and if your lucky they are using DarkComet
