Finding an Image within an Image (Image searching)

I'm basically looking for a quick way to search an image within an image and bring back the coordinates of that image. It seems like with searching and certain trial/error projects I am still not getting the results that I would like.

This questions seems to be repeated quite frequently - I figured there has to be a pre-made .dll or lib file to reference for this.

Anyone have any suggestions?

I appreciate any information you may have on this.

Thanks!

This isn't that useful to me =/ - I have already read this.

but thank you for your efforts.
