Doniu - September 6, 2012, 2:43 pm

Hello, can anyone tell me if I should untick the boxes which say, 'Dont scan a file above 4MB (recommended)' and 'Only scan known extensions (.exe, .dll etc).

I think I should untick them if I want a better scan because not all viruses are .exe, .dll etc am I right? And also some viruses are more than 4MB.

Btw if anyone wants to know where these options were they were in Preferences and then Scanning Preferences or something like that.

phybe? - September 6, 2012, 2:44 pm

I would keep it on whatever it was on by default.

Retribute - September 6, 2012, 2:45 pm

I would personally recommend to keep it as default, but I don't see why you can't change it up to suit your preference. Go ahead. Your preferences anyway.

Tiszy - September 6, 2012, 3:08 pm

Tick ON - 'Dont scan a file above 4MB (recommended)' [Why it is off default is it takes a lot of time to scan, and uses much of your CPU and RAM to do it]

Tick OFF - 'Only scan known extensions (.exe, .dll etc). [It'll scan .jpg, .bat, and other not so known ext. too, which is good]

When I crypt stuff sometimes stubs can be 5mb+

I suggest scanning everything my brotha.

What do you have to lose? Nothing :D
