Thread: [auto typer](#)

**gazpwner** - September 6, 2012, 3:47 pm

I don't know where to post this. I need a macro/auto typer that can make keystrokes insanely fast. i have one that can hit every key in 100th of a second but that is not fast enough i need one that can hit every key in 10000th of a second. i don't know what i need so please help.

If you're under windows you can try AutoHotkey.

<http://www.autohotkey.com>

Code Send, a ;Sends a once

```
Code SetBatchLines -1 ;Execute at maximum speed
Loop, 10000
{
    Send, a ;Sends a 10000 times
}
```

Loop, 10000
{
    Send, a ;Sends a 10000 times
}
```

10,000th of a second, 0.1 milliseconds between key presses, not 10,000 times.

@OP, this is an extreme faster speed, OP, may I ask what it's for so I can point you in a more promising direction than an auto-typer?

I fully realized that. I just choose 10,000 as an arbitrary amount to loop the keypresses. They still fire as fast as the program runs.

What do you need actually? A spammer?
