Thread: [ADD darkcomet server \(slaves darkcomet\) to slave computer startup](#)

mahaprabhu.deom - September 7, 2012, 4:58 am

so the title says it all i want to put darkcomet server to my slaves computer sartup

azihak - September 7, 2012, 5:00 am

when creating server on module startup tab check "start the stub with windows"

Dolan. - September 7, 2012, 5:01 am

In the config of the RAT make sure that 'Persistent' is checked.

If you're using a Crypter (you should be) it should have the option along the same lines.

btchacker - September 7, 2012, 5:03 am

just use module startup in the builder of dark comet. check the box "start the stub with windows" and drop it to APP#.

or better: use a crypter with startup function.

Terry A. Davis - September 7, 2012, 5:07 am

He's got it in one ? this is how you do it. and now days most crypters have the start-up option readily available, so just tick it and give it a name

mahaprabhu.deom - September 7, 2012, 5:50 am

thanks everyone that is really helping me

Dexter.1337 - September 16, 2012, 7:44 am

I have a similar problem!

I Check the startup option.

[url=http://www.xup.in/dl,20745149/Unbenannt.JPG/][img]http://www1.xup.in/tn/2012_09/20745149.jpg

But after the victim restarts his computer.He gets a uac notification "are you sure you want to run the application e.g "server.exe" < my virus.

But that doesn't make any sense.

The point is that i want, that my server.exe goes automatically into the startup modul of the computer, without any notifications!

And thats why i dont have any vicitms after they restart their computer.

Does that mean i have to code a little programm that forces my server.exe to have the startup key

in HKCU\Software\Microsoft\Windows\CurrentVersion\Run, to avoid the uac notification ?

Or do I need a crypter where im able to choose which startupkey my server.exe gets.And where i am able to chose where i want it to drop ?!

I hope anybody can help me !

Additional + I tried every combinations while i create my server.exe.Everytime the vicitms gets the "uac" notification!

Thank you in advance !

I have a similar problem! i put my sever in one slave but everything restated the server no run up i have to doing manually

JayhCru - April 27, 2014, 1:47 pm

when creating server on module startup tab check "start the stub with windows"

Brado - April 27, 2014, 2:59 pm

Most RAT and keylogger tools have this feature. Otherwise you can use a crypter, almost every crypted have this feature 'add to startup folder'. It will add your virus to your victims startup folder.. so if his computer goes on, then your virus will run also.

EDIT: The force admin option in the crypter i use replicates this.

Brado - April 27, 2014, 7:13 pm

Use a crypter or sonething and add it to the startup folder. Most rat and keylog program has this feature!

jde1126 - June 16, 2014, 6:19 am

You still need help? Im a little late. lol

smileman - July 1, 2014, 11:33 pm

please can any body help me with the darkcomet i have the 5.3 but it not working on my system beside i have study video on how it work but it does not work please anybody out there to help me and teach it kindly added me on Skype- david.william245

TwollySwag - July 9, 2014, 12:20 pm

Hi. The problem i have is that when i send them a Rar file (i can't upload exe files on mediafile) The victim always has to have WinRAR and so i would have to get them to download that as well ;once they open the darkcomet server they always see that nothing comes up and then just right click and delete it. Is there not anyway i can get around them having to have Winrar or winzip and prevent

them from being able to just delete it. Thanks
