Thread: [\[Tut\] Tumblr Spreading Meathod || Get Hot Slaves \[Pics\] \[Noob Friendly\]](#)

Cutefuzzypuppy - September 7, 2012, 7:16 pm

Hello HF,

I will be showing you how to spread your server via tumblr! This is my first tutorial so please go easy on me. ?

Things needed:

- 1) Tumblr Account
- 2) Drive-by
- 3) Something to spread (rat, keylogger, etc.)
- 4) Patience

Step One: Make Tumblr Account

If you don't already have one, sign up for tumblr and make a new blog. If you want you can customize the blog to who you're trying to spread to. If you want female slaves, then make a One Direction or Justin Bieber blog and title it something relative to what you post.

Once you are registered. Choose any free theme and make some posts. Try to fill up at least a page to make your blog look legit. ?

Step Two: Incorporate Drive-By in your Theme

Spoiler [\(Click to View\)](#) Note: I am not going to go into the details on how to make a drive-by. There are tons of tutorials here that tell you how to make one or you can buy one if you don't feel like making it yourself.

We will now be putting our drive-by into our tumblr theme via a piece of coding called "I-frame" Don't know how to code ? That's cool ? because we will be using a generator that makes the code for us. ?

Go to this website [I-frame Generator](#) and fill out the info like shown in the picture and hit generate.

Spoiler [\(Click to View\)](#)

[img]<http://img824.imageshack.us/img824/6074/7thspacecomwebmastertoo.png>[/img]

Once you have generated your code, copy it and go back to tumblr and click "Customize Theme" followed by "Edit Html".

You should now see the coding of your tumblr theme. Scroll down to the very bottom and paste the I-frame code you generated right above where it says "</body>"

Spoiler [\(Click to View\)](#)

Congrats! Just hit save and now every time someone visits your tumblr account your drive-by will have a chance to infect them. ?

Step Three: Getting People to Visit your Blog

Now the fun part!

Go to search tags and search for whatever type of blogger you want to infect. Follow as many blogs

as you can and maybe about 1/5 will visit your blog. If you want to greatly increase those odds then message them saying something along the lines of "Hey :) I'm new to tumblr and I really like your blog. Would you mind rating my blog as I'd love to get your opinion"

9/10 times the person you message will at least visit your blog even if they don't reply back.

Keep doing this and I guarantee you will get tons of slaves. I started doing this about 4 months ago and now I get about 20 slaves a day without even having to visit tumblr.

Spoiler ([Click to View](#)) It took me 4 hours to make this tutorial.

I could of easily made this a "Post here and I'll send to you" tutorial but I didn't because I hate those.

So please, if nothing else, at least take the time to say thanks. ?

**Pr?nce** - September 7, 2012, 7:20 pm

Dude this is very nice, great work man.

**Cutefuzzypuppy** - September 7, 2012, 7:23 pm

Thanks. I'm glad you enjoyed the tutorial!

**Batmayne** - September 7, 2012, 7:43 pm

Thanks for the tutorial seems like a nice spreading method :)

**savvymatthew** - September 7, 2012, 9:04 pm

This is a real good tut... never used tumblr before... might have to give it a try.

**terminal** - September 7, 2012, 11:39 pm

Never thought of this, thanks :)

The only problem is a lot of people use tumblr on there phones.

**doomsday101** - September 8, 2012, 12:07 am

im new here. so how this works? i mean what its aiming for?

**Cutefuzzypuppy** - September 8, 2012, 11:21 am

If you have a drive-by, you can make it so whenever someone visits your tumblr page a fake message will come up usually telling them they need to update something in order to view the page but in fact it's asking for permission to run your rat/keylogger. ?

**Sir Asylum** - September 8, 2012, 11:34 am

Lol this is a very nice tutorial bro, i havent seen this method before.

Thanks in advance.

~Schiz0ide ?

**HAMM01** - September 8, 2012, 11:40 am

Nice one .something different from other spreading methods. :)

**Jae?** - September 8, 2012, 11:44 am

That's actually quite original. There's a few things you could do really such as doing a CSRF inside of an embedded image with your code. Pretty sure that could work.

**Cutefuzzypuppy** - September 8, 2012, 12:17 pm

Thanks for the feedback. I almost didn't make this tut because I thought it would just get buried or would just be noobs complaining they can't get it to work ???

Never thought about doing that but yeah I don't see why it wouldn't work. Thanks for the suggestion ?

**ramiz123** - September 8, 2014, 3:46 pm

how do you like rotting in jail? lolol

**Mbae** - September 9, 2014, 4:31 pm

Nice. I may have to try this since I use tumblr already. I want to see how it works
