Thread: [What do you guys think of this? -Multitool](#)

PunisherShot - September 8, 2012, 3:51 pm

This is a login program which then leads to a Hub of a sorts, or a Multi-Tool I guess.

Spoiler [\(Click to View\)](#)

Well, I plan on making a bunch of programs. Instead of having a shit ton of them on my desktop, why not have one mega-app? Login as the Admin, and get them all. If I made a second account, say User, and you'd get most of them except the ones I dont want you to have. Mainly it's to learn more and more about VB and if I have friends who want this program, I can send it to them. Its a small thing, I know. But I'm just learning so who can blame me?

I remember when I did this, it was such a fun task until I realized it was decently useless for me. I suggest to keep going though and make it nice.

A suggestion: Order the apps to which you made them such as:

1st Project: Calculator

2nd Project: Picture Viewer

and etc.._

Note*: Don't copy and paste source code unless you either, can tweak it to make it your own, or you know exactly how it functions and credit the original author. Just some advice, programmer to programmer.

fearless1333 - September 8, 2012, 4:31 pm

It's a decent first VB project. By the way, if you need any tutorials or project ideas, check out this

site <http://www.minich.com/education/wyo/vb/>.

adio548 - September 8, 2012, 4:33 pm

That's Pretty good to be your first one.

TrackPro+ - September 8, 2012, 4:40 pm

What theme is that? A windows theme or a customizable form theme..?

Just some advice, programmer to programmer. I didn't C/P any code, its all mine. I just tinkered around with the logical things I should use, until I found the right variable an such. Also, my first project was a Skype Spam Bot. This is my 2nd. By the time i've wrote this post, I've completed and tweaked the WebBrowser (No history, cough porn *cough*) lol. My next project is to learn more about DDoSing and such, and possibly incorporate it. Im planning to add a Skype Resolver too, its possible in VB, just hard. Also, How do I add a background kinda thing to my projects?

MooCowManiak - September 8, 2012, 5:29 pm

Its good for VB Beginners/Intermediant, nice job, definatly getting this :D
