Thread: [\[EASY\]{PICS}HOW TO GET IP ADDRESS WITH JUST A LINK{PICS}\[EASY\]](#)

Pops - September 9, 2012, 8:52 pm

Hi guys! In this thread I'm going to be showing you the easiest way to get someone's IP address without a Skype resolver or any program like that. As far as I'm aware this method is public and a lot of people will already know it, but if you don't know it, keep reading.

Basically what we will be doing is sending our target a link. When they click this link, an error will be displayed, and their IP emailed to you. Don't worry, you don't have to use your own email for this. I will be showing a way to do this without using an email you own.

So first off, go to [whatstheirip.com](#)

It is a site that generates IP grabbing links. When you visit the site it will display your IP address plus all it's GEOIP data. You don't need to pay any attention to that just yet.

You will see a box which requires you to type in an email. If you don't want to use your own email, type in an email in this format: [exampleemail@yopmail.com](#)

Yopmail is a free disposable email provider, so you can use it and no one will ever know. It's also great for making emails for eWhoring. Anywayz, back on topic. You can type in any [@yopmail.com](#) you like, since every email already exists on yopmail. I use [lemail@yopmail](#) because I can :P

NOTE if you use an email like the one I used, you're gonna find a lot of other stuff in it that you didn't put there. Don't use the following unless you don't mind getting some pretty gross stuff:

[email@yopmail.com](#)

[google@yopmail.com](#)

Ok so now we have the email put in, click 'get link'. It will generate a few links. These links are the IP grabbing links. Now depending on who you will be using the link on will decide which one you should use. Here's what I recommend:

Friends - [youramonkey](#)

Chat room people - [bvog](#)

Getting people to eWhore on - [hondachat](#)

Basically what you do is just send your victim the link, and when they click on it they will be shown an error message. Most people in chat rooms will click on anything so they will just think 'oh its not working, nvm'. However friends might be suspicious so send them the [youramonkey](#) link because it has a funny name and it has a surprise once they click it!

To get the IP once someone has click the link, go to [yopmail.com](#) and enter the email address that you used. There will be an email saying 'xxx.xx.xx.xxx has click your link' (the x's represent the numbers). And congratz! You've just got their IP address!!!

So there you have it! That's one way to get an IP address without any programs! I hope you guys enjoyed my tutorial and that you find it useful!

Thanks for reading!

Lethalnz

P.S. I typed this on my iPod so sorry if the images are weirdly sized.
