Update

V1.1

- Fixed Max Boot Time Glitch
- Multiple API Support

Hey Guys,

I just finished coding my free custom booter source. It has all the basic booter features such as a HUB, IP Logger, Host to IP and a API Installer that I added since there are many APIs coming out fairly recently. Here are some pictures.

It uses an API in which there are many in the marketplace. Basically it executes 1 link which is in the api section of the source.

**bigboy** - September 11, 2012, 4:11 pm

very nice to give this away...good job and have fun mate...

I dont believe there are any "free" APIs out there because the poeple that own the API have to pay for servers etc, although I believe Paradox API allows you to put your own servers for free.

Not necessarily at the start. He's giving away the source to the booter, you have to add APIs and such for it to be able to hit someone offline.

It's not that bad but why didn't you use a template engine? It would make it so much more readable and simpler. Also you shouldn't have used hash() but hash\_hmac() with 2 salts - one in config and one generated randomly for each user.

Oh and by the way - you did not add multiple API support. Well you did, in the boot.php but you didn't make it possible to add mutiple APIs in the admin panel.

I stated in the admin panel that each is splited by a space.

Seems like a nice bootee

**BlackLayer** - February 25, 2013, 5:33 pm

You forget add coding php admin > logs but no show user from list view!

[img]<http://img248.imageshack.us/img248/7582/booternolistview.png>[img]

where is user? ?

made put code works fine from user listview

Don't forget add fix version 1.2 ?

**Eternal Minds** - February 25, 2013, 8:14 pm

Great job, wickd. Love to see people put this much effort into free stuff.

**AViron** - March 6, 2013, 3:45 am

The files not working. fix it.. ? :o.

**HIGH PAID FELLA** - March 6, 2013, 4:01 am

Can I get this, great source bro.

PMing you now

**'SVEN™** - March 6, 2013, 6:18 am

I'm trying to use this but I can't get the API to work.. :/

I've put the correct format of the shell.php but it still dosen't work. I would appericate some help, thanks in advance :)

**Peso** - March 17, 2013, 4:21 am

Thank you for the direct link, very useful!

**??????** - March 22, 2013, 3:16 pm

im such a nub.. what does this error mean?

Code Fatal error: Uncaught exception 'PDOException' with message 'SQLSTATE[28000] [1045] Access denied for user 'u239414010\_miser'@'localhost' (using password: YES)' in /home/u239414010/public\_html/config.php:7 Stack trace: #0 /home/u239414010/public\_html/config.php(7): PDO->\_\_construct('mysql: host=mys...', 'u239414010\_mise...', 'censored') #1 /home/u239414010/public\_html/index.php(2): include('/home/u23941401...') #2 {main} thrown in /home/u239414010/public\_html/config.php on line 7

ive done the sql and edited the config file right as far as i know and anything ive messed up was in an attempt to resolve this issue in the first place.

**?Dunsparth** - April 17, 2013, 8:57 pm

I love this thanks Wickd

This source is sexy as fuck.

**darry** - April 17, 2013, 9:05 pm

This is really nice, if I may add; you should probably add attack types and use various kinds of <input> like a drop-down menu for time and possibly it's on separate attack page with the resolve being automatic.

**Fly By Night** - May 23, 2013, 10:13 am

This stresser source uses a API, You can easily add shell support though.

**Seth Rogen** - November 15, 2013, 6:50 pm

Here's the error fix for everyone, I've spent a while fixing it, while it was rather simple, in the end, everyone who couldn't fix it will look stupid, as I was looking stupid myself.

[1] Make sure your PHP Version is not 5.3, it tends not to work, 5.4 works the best in my cases.

[2] Replace the //DB Config area in config.php with this:

(See if you can find the mistake that was in the original source.

```
Code define('DB_HOST', 'mysql host');
```

```
define('DB_NAME', 'database name');
```

```
define('DB_USERNAME', 'database user');
```

```
define('DB_PASSWORD', 'database password');
```

```
$oddb = new PDO('mysql:host=' . DB_HOST . ';dbname=' . DB_NAME, DB_USERNAME, DB_PASSWORD);
```

Have fun with the source all.

Works on the free hosting I'm using.
