Thread: [Firesale DDoS Webpanel Bot](#)

Anatosis - September 14, 2012, 3:04 pm

Our goal is to bring a Webpanel Panel Bot for a small price to our User Scene.

This bot we have always been regarded as a fairly stable Webpanel bot for the coding language. Net. Which in our opinion, is offered at a very fair price / performance ratio.

Any newly created Bot.exe unique because it is created with a process CodeDom!

[+] Builder

You can create your Bot.exe as often as they want. Each newly created Bot.exe is unique because it is created using the CodeDom method.

With the interval you can choose how often you want the bot to connect to the Research Panel.

The multi-file binder allows you to as many files as you want to connect to the bot.

Change the Assembly and the icon with the random or clone function.

Our unique generator with fake Junks APIs and allows your Bot.exe make even more unique and reduce detections.

Our builder also gives you options of how to change file pump about the size of bots and manipulate file spoofers to the ending of the bots can be.

The Install-class install their bot, no matter what directory you hide it and secure it with the rootkit. You choose the file name and the registration name, and if necessary, delete the bot to leave after the start of the melt function.

[+] Panel

The panel is distinguished by clean statistics, simple design and the sophisticated task management system.

When programming has been very careful on it that the server is not overloaded in order to keep as many bots as possible.

Our panel is compatible with all major smart phones to the move to keep full control of the botnet

[+] DDoS

Protocols: SYN, UDP, HTTP GET or POST, and in SLOWRIS

Another very important feature is the DDoS overloaded function with the server is so much until she crashes. When the program was especially valuable feature DDoS placed on the strength and effectiveness, without which the entire bandwidth is used by the slave!

[+] Visit Page

Very useful to increase the traffic to a website.

This can be done as visible and invisible.

[+] Download & Execute

There was even built a loader will download a file and executes it.

This is very useful to install RATs or other Malware code for your victims to.

[+] Update System

In addition, there is the update system so that a faster version or server change is possible.
