Thread: [\[TUT\]{WORKING}\(EASY\)?How to crack wifi on your iDevice\(EASY\){WORKING}\[TUT\]](#)

Pops - September 15, 2012, 4:48 pm

Hi guys. In this thread I will be going over some ways to get into locked wifi on your iDevice. I can confirm that the 3 things posted below work because I use them all.

First method:

WifiHacker

WifiHacker was originally in a Spanish repo before it was removed by some people who complained about it (though I'm not sure why they did). Now the only way to get it is to download the .deb and install it using iFile. Since I'm a nice guy, I'm gonna save you the trouble of googling it and give you the download link now :)

Spoiler [\(Click to View\)http://www.mirrorcreator.com/files/0BPIAVRK/wifihacker_2.0.deb_links](#)

Find a downloader app in the AppStore, and download the .deb

Then open up iFile and locate the .deb and install it.

How to use it:

Simply open it up and type in the last 6 numbers/letters of the routers name and press "Go". It will then calculate the default passcode of the router. It's as simple as that.

Second method:

iSpeedTouched

iSpeedTouched can be found in the BigBoss repo. Just search for it. You can download it as you would with any other cydia app. However in order to get it to crack wifi's you need to download the rainbow tables it requires. There is a download link in the app, so paste it into your downloader and move it to the right folder using iFile.

Third method:

Nick Kusters

nickkusters.com is by far my favorite way to get access to locked wifi. Its great and works every time. You don't need to download anything to get this to work, but you do need an Internet connection, so I recommend using a mobile phone to view the site. It can calculate the WPA/WPA2 keys for any Thomson/SpeedTouch router and incredibly quickly.

So those are basically the only working ways of getting into locked wifi using your iDevice.

I hope you liked this tutorial and that it helped you.

Nice guide, but I recommend you suggest using the Safari Download Manager tweak in Cydia, instead of telling them to go into the app store and find a random download app (that usually never work). This solution is a built in file manager and downloader and will help newbies understand your guide alot easier.

Cheers OP :)

WifiHacker

Watch out for this.

It may be infected.

It's through sendspace. It's a .deb.exe and my Vipre blocked it from opening.

Found clean link.

If it was infected I was unaware, as I got the link off the Xsellize forums and downloaded it straight to my iPod.

Repo

ihackmyi.com/cydia

And yes I saw it.

That repo doesn't work for me :(

That's why I posted the deb link

Grin - September 15, 2012, 9:58 pm

Ahhh...I see. Well, is it a good repo? I don't want to add random ass repos on my iPod.

Rikh39 - September 16, 2012, 7:26 am

WifiHacker Is Fake! And If You Don't Have A Wifi Connection These Apps Won't Work!
And It Are Default Passwords! If They Changed It....
Just JB Your iDevice Add this Repo: <http://cydia.theworm.tw/>
And Install Aircrack-NG! And Bruteforce The Password!

Not true!
They all work.
Nickkusters is the only one that needs wifi.
And guess what. Aircrack-NG for iOS is fake you idiot. Read my other thread.
iWifiHack is fake, WifiHacker is real.

Grin - September 16, 2012, 1:16 pm

All idiots.

Air crack is real. But it's impossible to brute force pn your iPod. The hardware is no possible. You need the monitor.

Wow your nice aren't you.

Aircrack for iOS isn't real.

It was made to prove that it was possible.

Grin - September 16, 2012, 1:34 pm

...

Therefore it's not real.

:-

lol

If it was MADE for the iOS regardless of the ability to work, it can still run.

Your welcome!

I'm glad you found this useful!

Thanks man.
