Thread: [{DETAILED}?The complete guide to beginners hacking!#{DETAILED}](#)

Pops - September 16, 2012, 2:21 am

Foreword

Hi there, and thanks for reading my thread! Hopefully this gives you a bit more of an insight towards starting hacking. This thread took me a long time to type, so please post a thanks below.

Sections:

- 1) RAT's
- 2) Keyloggers
- 3) Java Driveby's
- 4) Crypting
- 5) Ddosing
- 6) Proxies
- 7) VPN's
- 8) iDevice hacking
- 9) Other stuff

Before we begin, here are some common terminologies you should know:

- RAT = Remote Administration Tool
- Logger = Key logger
- Server = Either of the above, it is used to capture logs and is crucial when it comes to using a RAT or keylogger
- JDB = Java Driveby
- Crypt = Encrypt
- Crypter = A tool used to encrypt a file and make it undetectable by anti-virus programs
- FUD = Fully UnDetectable
- UD = UnDetectable, but not fully undetectable
- VPN = Virtual Private Network

RAT's

RAT stands for Remote Administration Tool.

RAT's are usually one of the first things people learn how to use when they start out hacking. RAT's can be used for a number of things. They can be used to scare people, play pranks, or just hack their stuff. RAT's have many features, which is one of the main reasons people use them; many things served by just one program. Some features include:

- Stealers
- Webcam
- Key loggers

- Move the mouse
- Open programs
- Remote shut down
- Ddos targets

With all of those things it is understandable why people use RAT's so often. However I would advise against using a RAT for malicious purposes as you can get in major trouble if you get caught. For tips on how to stay safe, see sections 6 and 7. Most people won't even notice they have been infected because RAT's these days are well hidden. And even if they do find out they have been infected, there is usually not a great deal they can do about it.

If you are looking into using a RAT, here is a list of RAT's.

Free RAT's:

- Dark Comet
- Cybergate RAT

Paid RAT's:

- Blackshades
- Blue Banana

Keyloggers

Keyloggers are tools used to log keystrokes on computers. While they have a lot less functions than RAT's, they are far easier to use and to set up. Keyloggers are great for beginners. I suggest using a keylogger before you use a RAT, as it will give you the gist of the whole thing, and it's easier.

If you are thinking of getting a keylogger, here is a list of them.

Free keyloggers:

- SysLogger
- Reflect logger
- Grassy Knoll logger

Paid keyloggers:

- Limitless logger

If you are looking into using a keylogger, I suggest getting a file binder and a crypter (see section 4 for more information). As with a RAT, make sure you stay anonymous while using one of these.

Java Driveby's

Java Driveby's (more commonly referred to as JDB's) are the easiest way of infecting people. They are super easy to use and take about 5 minutes to set up. Basically what a Java Driveby does is, using a java applet, download and install your server when the victim clicks the button to allow java to run. Learning to make a Java Driveby is very easy. All you will need is a web hosting service and a copy of the site you want to fake. The easiest sites are Runescape private servers. Search around HF for a template for one of these.

A few tips incase you want to make one:

- Use a free web hosting service (e.g. SPAM or Dolphhost)
- Get a free .tk domain to make it look more legit
- Put all your files into a .zip before uploading, and make sure you give it a relevant name (e.g. If you site is a fake RSPS, call the .zip "play")

Crypting

Crypting (short for encrypting) is an important part of hacking. Especially when it comes to make your RAT/keylogger FUD. When you crypt a file, you (supposedly but not in all cases) make it undetectable by anti-virus programs. This is great especially if you are trying to infect people. If you are looking for a crypter, here are a few.

Free crypters:

- Chrome crypter
- Illusion crypter

Paid crypters:

- Cube crypter
- Exe crypter

Ddosing

Ah, yes. Ddosing. I'm sure you've already heard of this, everyone has. Ddos stands for Distributed Denial of Service attack. Basically, when a site is ddosed, it will display a 404 error. If you want to ddos a site, here are a list of things you can use.

Free options:

- Asylum booter
- Florisions flooder

Paid options:

- Precision booter
- Accidents booter

Proxies

Proxies are a way of staying anonymous while browsing the Internet. They trick sites into thinking you are somewhere you are not. However they do have some limitations, such as the fact that they only provide anonymity in your browser and in programs with proxy settings. They do work though, so here are some ways to get proxies.

Free proxies:

- HideMyAss
- Proxies on HF

Paid proxies:

- HideMyAss
- Proxies on HF marketplace

VPN's

VPN's (Virtual Private Networks) are like proxies on steroids. Unlike proxies, VPN's tricks the whole computer into thinking you are in another place. They are incredibly effective and provide high anonymity. If you are thinking about getting a VPN, here is a list of VPN's.

Free VPN's:

- Bestcanadavpn
- Russia VPN

Paid VPN's:

- HideMyAss VPN
- VPN's from HF marketplace

iDevice hacking

iDevice hacking is one of my specialities. However since this guide is about the basics of hacking, I won't be covering that much, just some simple stuff. To learn the basics of iDevice hacking, you will need to do the following:

- 1) Jailbreak your iDevice
- 2) Add the ininjas repo to your iDevice
ininjas.com/repo
- 3) Download Pirni Pro

Other stuff

Here are a few extra tips about hacking:

- 1) Stay anonymous. I cannot stress how important this is! If you get caught while hacking, you can get into serious trouble. So make sure you always use a proxy/VPN, or even better, BOTH!
- 2) Download some free tools to start with. If you are new to hacking, don't go out and buy things straight away, because chances are, you won't know how to use them.
- 3) Use google! It's unbelievable how lazy some people are. They go and post on HF asking people to do stuff for them when they could just google the topic.

Well, you've reached the end of the thread! I would like to thank you for reading, and I really hope you found this thread useful! After over 1 and a half hours of typing, I am feeling pretty tired. Please post a thanks, and keep this thread alive, I would hate to have all my work go to waste. It takes only 15 seconds and you will have my undying gratitude! :D

So, thanks for reading!

Lethalnz

Ali3nnova - September 16, 2012, 2:30 am

hey bro can i have you guide plz is look nice

Terry A. Davis - September 16, 2012, 2:31 am

Yup it is the guide!

And thanks man!

(Sep 16, 2012 02:33 AM)AnnoyingIB Wrote: [\[CITE\]](#) Great guide! I just signed up to this forum and this helped me a lot :)

You are very welcome!

Glad to have been of help!

Welcome to hackforums!

Clearly you people don't appreciate my work. So I won't make any tutorials like this ever again.

Duffyoduck - September 17, 2012, 7:06 pm

thank you!(35 35 35 35 35 35 35 characters)

qurfy - September 17, 2012, 7:09 pm

Thank you, 35 char huh random words to express my thanks tasdfasdfasdfasdf

SuLLyMonster - September 17, 2012, 7:16 pm

Thanks for the intell on a few things here I already knew a lot about ratting though.

Vandal - September 17, 2012, 7:17 pm

Great for the newbies OP! Nice tutorial!

Pops - September 17, 2012, 7:32 pm

Thanks man!

And yea, hopefully this helped out some of the new people!

Notepad++ - September 17, 2012, 7:34 pm

Pretty decent guide. Would love to see more from you.

PianoWithoutKeys - September 17, 2012, 7:38 pm

Nice guide man! My only thought is in the terminology section you add

Dos = Denial of Service

DDoS = Distributed Denial of Service

and maybe even Dox = Short for documents, obtaining information about somebody

Also, I would mention the difference between DoS and DDoS

Pops - September 17, 2012, 8:02 pm

Ok I'll add those.

Thanks for the advice man!

Thanks man!
Im actually typing up a few more tut's right now!

bot_kill - September 18, 2012, 4:06 am

the basic things is always essential. thank for guide

Lollipopassasin - September 18, 2012, 4:48 am

This is the a very HQ tut thanks for posting it.

PR3DAT0R - September 20, 2012, 1:57 pm

Thanks Man!! Im a skid skill but im sure this will help me.

Pops - September 20, 2012, 4:25 pm

Thanks man.
I'm glad this helped you

MrTing - September 20, 2012, 4:30 pm

Well i would say that about sums it up! Nice job

dathug1981 - September 20, 2012, 4:41 pm

thanks im new good info respect man

Avolution - September 23, 2012, 4:06 am

thanks, it cleared many of questions in my mind.
very useful as new comer.

Sicarius - September 23, 2012, 4:33 am

Should help the noobies! nice tut!

Thanks man!

And yeah, that's the whole reason I typed it up :)

Grgsrn97 - September 23, 2012, 4:42 am

Hey man! I was just wondering why you didn't put nVpn under paid Vpn's? I have heard alot good of it!

And i have a few questions i thought you could answer in your thread:

After each subject: "Is this legal, or illegal?" "Should i know anything before i throw myself to the feds"

And maybe explain why each free and paid subject is good nor bad. :-)

Didn't want to ruin anyones day, just thought this could be helpfull. I am still learning myself, so don't know if there is any need for the above.

Have a nice day everyone!

EDIT:

And this is ofcourse a very helpfull and good thread for newbies and newcomers to the hacking world. So keep up the great work! GJ!

Thanks man.

I'll consider adding that into the eBook I'm typing up.

Unfortunately I can't edit the original post as I'm not l33t.

Thank anyway :)

You are very welcome! I am glad i can finally contribute to the forum as i am still learning!

When do you release the ebook? Maybe i can help you write it? If you want to ofcourse!

Pops - September 23, 2012, 4:53 am

I will be releasing it some time this week.

I've typed up 4/20+ sections. It's gonna take a while to finish.

Thanks for the offer but I think I'm gonna be fine editing it myself.

:)

Grgrsn97 - September 23, 2012, 4:54 am

Okay, thanks anyways! I look forward for the release!

Have a nice day my friend!

However, could i have your skype? :o

Pops - September 23, 2012, 1:23 pm

Bump, , , buuummmmppp.
Heheh :P
Sorry I had to do that.
This got pushed back 4 pages.

Sir Asylum - September 23, 2012, 1:38 pm

Nice tutorial bro, good for teh new guys on teh block

AcidSpinner - September 23, 2012, 3:22 pm

Thanks! This is definitely helpful to people trying to learn the basics.

Unacknowledged - September 23, 2012, 3:23 pm

Nice thread OP!. You will help a lot of noobs to hacking!

Gpure - September 23, 2012, 5:55 pm

Nice tutorial I would suggest using spoilers to let people choose the topics they need to go over.

Pops - September 23, 2012, 6:22 pm

Thanks for all the feedback guys!
Much appreciated.

zombiezh - September 24, 2012, 8:42 am

Great guide! I just signed up to this forum a few days ago and i'm trying to start hacking but i can't find a good [tut] or anything. :\

Th3PonyWizard - September 24, 2012, 11:19 am

Worst way to start. beginners should learn articles and languages, and not even touch tools before that.

Zero_Luffy - September 24, 2012, 11:27 am

All of them Include tool but I appriciate it :)

Here My tutorial about the proper way of Learning Hacking
<https://hackforums.net/showthread.php?tid=2669091>

Pops - September 24, 2012, 12:40 pm

(Sep 24, 2012 11:19 AM)Th3PonyWizard Wrote: [\[CITE\]](#) Worst way to start. beginners should learn articles and languages, and not even touch tools before that.

I know.

This is a guide just to teach them how to use certain tools.

In the eBook I'm typing up I have a whole section that stresses how important it is to learn the terminologies before starting to use these sorts of programs.
