Thread: [*SOLVED* I need someone to remove a RAT! Please! *SOLVED*](#)

InfinityComplex321 - September 16, 2012, 3:39 am

Hey guys, I used the DC Rat remover and found 4 rats on my computer, the thing is all DC rat remover does is delete the process, I tried restarting my computer and the rats were detected again, if anyone can help me that would be much appreciated. Thank you in advance.

Did you run a full scan with Malwarebytes?

i recommend you download these programs:

tdskiller
malwarebytes
superantispyware

if you dont have a good firewall download comodo firewall

cheers

Try this;

Go to start Write the word 'Regedit'.

Regedit's a Filestore where all registered files are stored.
It seems that the Remote administrations Tools are registered on your Computer.

Try searching for the Process names, and unregister them.
Restart your Computer, and check whether you're still receiving the RAT popups.

Thank you everyone, Malwarebytes removes all the rats, thank you again so much. Nothing is popping up now <3

Do you recommend buying Malwarebytes? Because it's just saved my life.

Do you recommend buying Malwarebytes? Because it's just saved my life. The free version works for me i just figure if the scan won't find it neither will the bought version
