Squidward - October 5, 2012, 4:15 am

(Oct 5, 2012 01:57 AM)Icy™ Wrote: [\[CITE\]](#) I wanna today buy that but how mass message works?
How mass message works:

You enter a message into the 'mass message' field, you press 'send', and it sends that message to all your skype conatcts. (You must be logged into skype and press 'allow access at the top when you press 'send' (if you have not already).

Notice: As stated in the OP, an awesome new version of Equinox is in development, and those who have already purchased will receive it. Some features may not work because of this.

Just a convenient way to check if an IP address is only or not.

Notice: The new version will be coming out very soon, stay tuned! Some features in the current version may not work at times due to this.

The developer will fix it when he comes online, the API looks like it has been leaked. This issue will be resolved ASAP when the developer comes online.
