Thread: [HackForums userscript - HF news notifier \[1.0.9\]](#)

The-One - September 22, 2012, 10:20 am

Hey,

Because of <https://hackforums.net/showthread.php?tid=2868516> thread in the suggestion area I decided to make a userscript who checks if there is a new news topic posted.

The script uses cookies, checks if there is a update once every 30 minutes and is made in Javascript. Source can be viewed anytime (link below).

Only fully tested on Google Chrome, I have tested it on Firefox and it worked but I haven't fully tested it fully for bugs.

Updated on: 13/08/15

Link: <http://pastebin.com/raw.php?i=CxFjcxQq>

Please report any bugs if you find them,

Enjoy. ?

Tidal Wave - September 22, 2012, 10:52 am

I think this is very cool! I have seen many request this.

Ku?s?h? - September 22, 2012, 10:53 am

Are there any other cool userscripts for HackForums? Can you post any trusted ones?

Osuka - September 22, 2012, 10:55 am

Will these pick up all the ones that are barely made as a new topic.

Mr Kewl - September 22, 2012, 10:55 am

Check the ones from Spafic and xerotic.

It just checks if there is a new normal thread made (no sticky) and it notifies you.

Mises - September 22, 2012, 11:32 am

This look interesting, I'll definitely check this out!

Thanks for this.

hugsyou - September 22, 2012, 11:34 am

I was looking into userscripts a couple hours ago actually. I think this is a good idea for those who

were in favor of the idea or would like to be updated on the news. I'm glad it Omni didn't put this into the site(yet), I don't read the news and would of found it be annoying.

The news is actually pretty interesting, and I doubt Omniscient ever adds it since it will cost allot of bandwidth since you have to load settings and the news page every single time someone enters the forum.

Maghbool - September 22, 2012, 12:22 pm

It's pretty cool, but I don't really care for the news on HF.

Oak - September 22, 2012, 2:54 pm

<https://hackforums.net/showthread.php?tid=2868516>

If you enjoy this idea, please show your support on that thread above.

It will help to make something like this more official, and help others find out about the HF News.

tres - September 23, 2012, 3:13 am

The point of the notification was to inform people that never heard about the news!

We need something official so everyone has it installed but nice job anyways!

eJaku - September 23, 2012, 3:15 am

Cool man thanks for this, definitely going to be using it.

Ne?ro? - September 23, 2012, 3:15 am

Reverse will be happy to see this.

Good job, buddy! Using it :)

The-One - September 23, 2012, 3:19 am

No problem guys, remember to report back bugs if you want to!

Leg?nd - September 23, 2012, 3:20 am

Thank you for this, I'm trying to make it adjust to the lounge so I can see new topics :)

eJaku - September 23, 2012, 3:35 am

(Sep 23, 2012 03:20 AM)Ninj? Wrote: [\[CITE\]](#) Thank you for this, I'm trying to make it adjust to the lounge so I can see new topics :)

Are you sure thats a good idea, thats gonna spam you.

Leg?nd - September 23, 2012, 3:36 am

Not sure, I'm a shitty coder so it didn't even work :) I might do it for a littler forum like computing or runescape.

_DeNy - September 23, 2012, 9:19 am

Always taking my ideas when I'm not on my laptop... Nice...

^-^

Good job with the script though. Not too great optimization, but still alright. Everyone's gotta start

somewhere.

Jeny - September 23, 2012, 9:24 am

Thanks for making this. Saves me time checking for the news.

?WINTER - September 23, 2012, 9:30 am

Anyone know how to bypass this?

I'd really like to add this extension :)

_DeNy - September 23, 2012, 9:32 am

(Sep 23, 2012 09:30 AM)Đêñămič Wrote: [\[CITE\]](#) Anyone know how to bypass this?

I'd really like to add this extension :)

Install an extension called "TamperMonkey" from the Google App Store.

That will make installing scripts a little easier and a little less tedious.

SIM-878011 - September 23, 2012, 9:35 am

(Sep 23, 2012 09:30 AM)Đêñămič Wrote: [\[CITE\]](#) Anyone know how to bypass this?

I'd really like to add this extension :)

It's simple, go to the page of the script click the green button install now you should have the download down the bottom left?

Once you have that, go up to settings, then go to tools > extensions.

Drag and drop the download down the bottom left into the extensions and it will ask you to install.?

Glad to help if i did.

Thanks man, now it works!

This is pretty cool!

SIMULACRUM - September 23, 2012, 9:39 am

This looks pretty nice. Although I don't really read the HF news.

Nonon Jakuzure - September 23, 2012, 9:45 am

Finally! So glad someone has made this.

The-One - September 23, 2012, 11:39 am

Nuutero™ Wrote:The "alert" pops up every time someone posts to the news section. I was waiting for the new edition when the alert popped up. I clicked it and it redirected me to the old news edition

where someone posted a new reply. Don't know if it's supposed to work that way but it would be great if it only alerted when a new thread was created.

Fixed; thanks for reporting updated script can be found at userscripts.org.

Antigen - September 23, 2012, 11:50 am

Pretty cool man, You deserves more attention.

root@fox - March 30, 2013, 2:48 pm

I know this is old, but does it still work?

Sorry, not trying to gravedig, just curious.

Cody8295 - March 30, 2013, 4:00 pm

Installing right now, looks pretty nice, good work.

(Aug 13, 2015 06:11 AM)The-One Wrote: [\[CITE\]](#) Updated it for you. Enjoy.Hey dude, great script you wrote there, keep on the good work.

Would you mind to PM me or add me in Skype : god.hacks

I got some questions to ask to you about your previous works on GUID and HWID securing methods.
