Thread: [ULTIMATE DOS DDOS TOOLS TUTORIAL](#)

Beowolf - September 24, 2012, 4:22 am

Hello and welcome to my tutorial on dos tools

download torshammer from:-

<http://packetstormsecurity.org/files/98831/Tors-Hammer-Slow-POST-Denial-Of-Service-Testing-Tool.html>

torshammer:-Tor's Hammer is a slow post dos testing tool written in Python. It can also be run through the Tor network to be anonymized. If you are going to run it with Tor it assumes you are running Tor on 127.0.0.1:9050. Kills most unprotected web servers running Apache and IIS via a single instance. Kills Apache 1.X and older IIS with ~128 threads, newer IIS and Apache 2.X with ~256 threads.

usage:-torshammer.py -t <http://www.target.com> -r 256 -p 80

and i insist not to use tor to attack cause the users of tor will have problems,try with a vpn instead...

we can use more than 256 threads like 500 or 1000 and even 10000,but 256 threads are enough to take a server down in less than 1 min..

THC-SSL-DOS:-THC-SSL-DOS exploits this asymmetric property by overloading the server and knocking it off the Internet.

This problem affects all SSL implementations today. The vendors are aware of this problem since 2003 and the topic has been widely discussed.

This attack further exploits the SSL secure Renegotiation feature to trigger thousands of renegotiations via single TCP connection.

Download:

Windows binary: www.thc.org/thc-ssl-dos/thc-ssl-dos-1.4-win-bin.zip

Unix Source : www.thc.org/thc-ssl-dos/thc-ssl-dos-1.4.tar.gz

usage:-thc-ssl-dos\ -l 500 --accept ip port

this tool can easily takedown websites with ssl renogation and the port for ssl is 443 so use 443 in place of port!!!

HOIC:

download hoic:-

<http://www.mediafire.com/?jkc7924jsa0161z>

H.O.I.C. BOOSTER NEWBIE GUIDE

- 1.Find a pre-made booster script.
- 2.Copy the WHOLE text in there.
- 3.Paste into blank text editor.
- 4.Go to -> File -> Save As
- 5.Browse your H.O.I.C folder
- 6.You should see now the included boosters of HOIC --> (Dutchfreedom.hoic , visa.stress.hoic and so on)
- 7.VERY IMPORTANT: First step is to choose the "Save as File" to ---> ALL FILES !
- 8.Now, save it as name.hoic (Name can be replaced with all you want, IMPORTANT: The file must be .hoic !
- 9.Restart HOIC
- 10.Fire lazars

If you can't get file to save as *.hoic extension - your file extensions are hidden. This is a simple fix, but is necessary to make the booster work.

Start --> Control Panel --> Appearance and Personalization --> Folder Options

Click View tab --> Advanced Settings --> Uncheck Hide Extensions for Known File Types.

NOTE:

If you want a different target, you only have to replace the URL's behind the randURLs.Append .The rest has to stay how it was.

Example: You choose the target : ec.europa.eu and want to replace it with the URL's.

It should look like this:

randURLs.Append "http://www.uoct.cl/" --> randURLs.Append "http://ec.europa.eu"

Also important: Replace ALL URL'S behind --> randURLs.Append <--

please post if you find this tutorial helpful!!!

?Eatos - September 24, 2012, 4:35 am

Nice tutorial OP. Keep up the good work...

Beowolf - September 24, 2012, 4:38 am

(Sep 24, 2012 04:35 AM)Eatos Wrote: [\[CITE\]](#) Nice tutorial OP. Keep up the good work...thank you!!im working on some good tutorials

maniakshay - September 24, 2012, 5:02 am

Are you fucking kidding me ,i cant download torshammer.

Beowolf - September 24, 2012, 5:04 am

download torshammer

here:-<http://packetstormsecurity.org/files/98831/Tors-Hammer-Slow-POST-Denial-Of-Service-Testing-Tool.html>

ShellKisser - September 24, 2012, 5:46 am

great share men... can ask something what is the tools needed to take down mail server..?

Beowolf - September 24, 2012, 6:52 am

there are no specific mail servers....they are present on a webserver

if you take down a website...even the mailserver also goes down

ShellKisser - September 24, 2012, 8:35 am

ah ok now i know i am little doubt with that.. what is the best tools to perform ddos? slowloris, loic; hoic; i have it but it seems doesn't worked on that particular site it seems like they have good security. i would like to know what is the best tools to be used?

thanks ...

c-4n0nym0ux-r - September 24, 2012, 12:09 pm

Great tutorial, i have used TorSHammer since i was on kindergarden... lol... great tool...

Pops - September 24, 2012, 6:28 pm

IMO all these tools suck.

I used them and they never worked properly.

Nice share, I guess...

Beowolf - September 25, 2012, 3:07 am

lol...they'll work when you attack specific servers with specific tools!!!!

not torshammer on nginx....like that!!!

Dat Kid Ian - September 25, 2012, 4:55 am

Cool tools man, Thanks for the share

ColdGun - September 25, 2012, 6:15 am

Good tutorial, i'll see if I can give it a try later.

hahdbwoannniabs - July 5, 2013, 4:54 pm

Thanks for trying to contribute, but these are all shit. So are all downloadable DDoS/DoSers.

razzmatazz - March 13, 2014, 11:11 am

Is it possible to get torshammer to use some other IP apart from 127.0.0.1:9050? My friend that i was attaching seemed to have blocked this... i still want to stay anonymous
