And yes my friends I'm selling my source of bytes protector, It's currently FUD and I will give you all the other previous versions too.

The reason for the sale? say that I do not have much time to devote to a crypter that requires from me a lot of time ... and I don't want to run a product that will fail to update and support. For me, my clients are not just for me to make money, but for they like my product, good enough talk. Here now the product in more detail.

Contact me for more detail.

Thanks.

For ethical reasons, I'd sell a single person.

They can just refud the stub and profit.

He isn't capable of doing that. I made the crypter FUD and added new storage method for it but he didn't pay me so he never got it FUD.

It shouldn't be released on HF without the owner's consent..
