Thread: [\[Beginners\]\[TuT\]How to Stay Anonymous on the Internet](#)

Goldfish - September 27, 2012, 12:21 am

In this Tutorial I will be showing you how to install and use OpenVPN to stay Anonymous online!

Changing Your IP

Static - Permanent IP Address

Dynamic - Not Permanent

How do I know if I have Dynamic or Static?

Open CMD > Type "Ipconfig /all" > Look for DHCP Enabled > If it's Enabled You have dynamic!

The hard part is to know what to do now, Normally you must turn off/Un-plug your MODEM for around 12-24 hours, with some ISPs it can take 48-72+

What is a Proxy?

A Proxy works by telling a website that you are connecting from some where you're not. This is what your connection looks like

What is a VPN?

What a VPN does is tricks your computer into thinking you are located somewhere else, It changes your ip and is more advanced than a Proxy!

These are the VPNs I suggest:

[Hotspotshield](#)

[HideMyAss](#)

[nVPN](#)

The most IMPORTANT Step

The most important step is -

1. Never use your real information online
2. Always use different Usernames
3. Get your self off of sites like Myspace, 411 and Facebook (Or keep your self hidden)
4. Always clear history & delete cookies at the end of every session

iPad. - September 27, 2012, 12:42 am

Nice tut, Ill probs use it :P

Giid kycj

Corso - September 27, 2012, 4:15 am

Nice new installment / tut. It builds well off your other one. Keep them up.

Fonsp - September 27, 2012, 5:20 am

You have to keep in mind, some programs force to use your real ip adress

allot of flashplayer websites work like this

only a vpn with ip binder works to prevent this.

[Ip Binding](#)

Also clearing you're cookies and changing your data and time to the your pc to the land you use the proxy is crucial.

i advice you to use a proxy in the country you live from.

zombiehacker - September 27, 2012, 12:04 pm

Nice tutorial and share, Thaank you.

tr1101 - September 27, 2012, 3:02 pm

good info, nice introduction to anonymous browsing

Ropey - September 27, 2012, 3:05 pm

Decent one, not a lot of people really need to unless you are doing illegal crap, stay away from all that and stay completely legit, the easier and best way, none the less great "tut" sir!

Goldfish - September 27, 2012, 3:43 pm

Being anonymous isn't a crime, and shouldn't be associated with it. Good people get dox'd ddos'd and alot of things just for playing games, (Runescape Staking for example)

Hotspot Shield is not anonymous, I went to sites that detected my real IP when using Hotspot Shield.

Maybe you're not using it right? Did you close your browser and clear the cashe before trying to use it?

Corso - September 27, 2012, 4:42 pm

Tor Project - Another fun tool to stay anonymous. Just saying :-P

Only posted this as I was just using Tor Project for a recent escapade. Once again Gold' - Nice tutorial and though I have not stated this before... Your signature makes me laugh man, good stuff!

I personally never recommend it, I find it unsafe because it disables alot of security features..

Therefor u need a ipbinding software

i believe only hide my ass offers that

?Victory - September 28, 2012, 2:27 am

that's a nice Tutorial ^^

Helpful for Beginners, Keep up the good work.

Then you're doing something wrong. Maybe your Firewall is blocking the VPN. I'm using HSH very often, and I do recommend it to very many people.

By the way, overall - very nice tutorial :)

Keep the HQ work up!

Keep the HQ work up!

That's one of the main problems that people have.

Superior1 - November 2, 2012, 4:41 pm

Just to let the blackhat people reading this thread know, Hidemyass receives logs, and Hotspot Sheild reports blackhat activity. I dont know about nVPN but i would suggest you get a paid VPN..
